

PROGRESS REPORT

Guinea-Bissau: progress report, September 2025 – September 2026

Edition of 2026-09-09 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the base tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the base holds nothing on that indicator. **That is a statement about this base, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-09-01 to 2026-09-08.

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Digital transformation strategy	The ENT.D.GW strategy was launched in January 2025 with ten pillars and 55 interventions to 2030, and Council of Ministers approval is still pending. 2025-01-29 — the National Digital Transformation Strategy 2025-2030 was launched by the prime minister and the minister responsible for digital transformation, with UNDP support: ten pillars, six objectives, 55 interventions and a roadmap to 2030. 2025-02-04 — a UNU-EGOV and UNDP follow-up meeting recorded that Council of Ministers approval of the strategy's decree was still pending, which is where the base leaves it: nothing in the twelve months to 2026-08-26 records the decree approved, gazetted or brought into force. The strategy is the instrument the World Bank-financed WARDIP programme and the UNDP Mais Digit@l grant both implement, so the financing behind it is moving while the legal instrument is not.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	ICT strategy	The US\$60m regional digital programme launched nationally in August 2026, giving the 2025-2030 strategy a delivery vehicle. The national digital transformation strategy for 2025-2030 sits on the ledger as enacted and approved. What it lacked was money and a programme. Both arrived: the programme launched nationally in August 2026 covering connectivity, data protection, the digital economy and electronic government, described by the minister as a pillar of effective public services, with a procurement plan and implementation reporting behind it.	ADVANCED
Strategies, plans and policies	Broadband strategy	A 2026-2031 strategic plan for the universal access fund sets targets for closing the coverage gap. A legal review recommended restructuring the universal access fund in October 2025, which is the base's judgement on the instrument as it stood. The 2026-2031 roadmap and financing plan followed in November and was delivered to the regulator in May 2026. It is a fund plan rather than a broadband strategy, and it is the nearest thing the country holds to one.	ADVANCED
Strategies, plans and policies	Data storage / cloud strategy	A feasibility study scoped a national cloud alongside a security operations centre and an incident response team. The study of September 2025 is the only document in the base that treats where Guinean government data should sit: it scopes a national cloud, a security operations centre, a national incident response team and a draft cybersecurity strategy. A data centre appears separately as a budget line: the 2026 budget carries a named digital transformation investment line covering the financial system, a data centre, communications and an enterprise system.	ADVANCED
Strategies, plans and policies	Data interoperability framework / roadmap	Decree 27/2025 sets national interoperability rules and consultants delivered the platform design in November 2025. The framework moved from intention to instrument in the window. The government approved the national interoperability regulation by decree in October 2025, with the gazette date disputed in the record. Consultants then delivered the interoperability structure, the platform and an action plan for digitising the main public services. The cabinet had approved the data governance and protection policy, the cybersecurity strategy and system interoperability together in September 2025.	ADVANCED
Strategies, plans and policies	AI strategy	No artificial intelligence strategy exists; the subject reaches policy only through misinformation cooperation and a regional framework. Nothing in the base records a Guinean artificial intelligence strategy, policy or working group. Where the subject appears it appears as risk: specialists debated artificial intelligence, ethics and disinformation at a Bissau forum in November 2025; ministers of Guinea-Bissau and The Gambia pledged joint action as artificial intelligence accelerates the spread of unverified information in June 2026; and a regional framework adopted the same month commits fifteen West African states to information-integrity laws.	NO CHANGE
Strategies, plans and policies	Data localisation policies	No localisation rule exists; the only hosting question on the record is the national cloud the feasibility study scopes. The data governance and protection policy approved by cabinet in September 2025 is the instrument that would carry a localisation rule, and nothing in the base records one inside it. What is being planned is capacity rather than restriction: the feasibility study scopes a national cloud and the 2026 budget names a data centre. Neither says what must be held in it.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Data governance policy	A National Data Governance and Protection Policy decree was approved in draft by the Council of Ministers in July 2025 and has not moved since. 2025-07-10 — the Council of Ministers approved the draft decree on a national data governance and protection policy, alongside decrees on interoperability and a national cybersecurity strategy. Nothing on the base confirms gazettal or entry into force, and nothing in the twelve months to 2026-08-26 touches it. Of the three decrees approved that day, only the interoperability instrument has moved since, and it moved through a programme announcement rather than a gazette. No data classification standard, no public-sector data catalogue and no data-sharing agreement appears anywhere on this ledger.	NO CHANGE
Strategies, plans and policies	Open data policy	No open data policy exists; the access to information bill remains in development and no portal is on the record. The base holds no Guinean open data policy, licence or portal. The adjacent instrument is the access to information bill the ledger carries as in development. Publication that does happen is done by institutions for their own purposes: the state budget volume and the fund's national summary data page are the base's only routine releases.	NO CHANGE
Legislation and regulation	Data protection legislation	The transitional council ratified the African Union, Budapest and United Nations conventions in May 2026. Domestic protection has rested on the regional supplementary act on personal data protection since 2010, with the national policy still in development. The window's movement is treaty ratification rather than a statute: the transitional national council ratified the African Union, Budapest and United Nations conventions in May 2026, having signed the United Nations convention at Hanoi in October 2025. No domestic data protection act has been passed.	ADVANCED
Legislation and regulation	Cybersecurity legislation	Three cybercrime conventions were ratified in May 2026 alongside a law against false online information. Guinea-Bissau signed the United Nations Convention against Cybercrime at Hanoi in October 2025, and the transitional council ratified it with the African Union and Budapest conventions in May 2026. The same sitting passed a law against the dissemination of false information online, which the ledger carries as its own row. The institutional side is still scoped rather than built: the feasibility study proposes a security operations centre and a national incident response team.	ADVANCED
Legislation and regulation	Legislation covering digital id	No identity statute is held; enrolment runs on a contracted production network and the regional card scheme. The base holds no Guinean law governing the identity register or the biometric card. What it holds is delivery: an eighteenth identity card production centre opened in June 2026 and a third regional enrolment centre in February. The governing frame is regional rather than national: a consultation opened in February 2026 on a roadmap from national identification systems to the regional biometric card.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	Digital payments legislation	Payment law is regional: the central bank's register licenses six banks, one payment institution and one electronic money issuer. No domestic payments statute appears in the base. Authorisation runs through the monetary union: the first licensed payment institution in the country appeared on the register in September 2025, and the June 2026 register carries six banks, one payment institution and one electronic money issuer. Domestic instruments are administrative rather than legislative: the revenue directorate's order making the payment platform the sole channel for the tax identification number.	NO CHANGE
Legislation and regulation	Legislation enabling data interoperability	A national interoperability regulation for public and private digital systems was approved by the government in August 2026, with no decree number or in-force date named. 2026-08-08 — the WARDIP programme announced government approval of a national interoperability framework regulating how public and private digital systems and platforms connect, presented as Guinea-Bissau's contribution to the regional programme. It is the one instrument of the three draft decrees the Council of Ministers approved on 10 July 2025 that has moved since. What the record does not carry is the instrument itself: no decree number, no gazettal and no entry-into-force date, and the approval is reported by the World Bank-backed programme that supports the work rather than by an official journal. No data exchange platform appears on this ledger for the regulation to govern.	ADVANCED
Legislation and regulation	AI legislation / regulations	No artificial intelligence instrument exists; the nearest is the law against false online information of May 2026. The law passed with amendments in May 2026 addresses false information on social networks and names no technology. It was passed by a transitional council seated after a takeover whose leaders had ordered radio shutdowns and blocked four major platforms nationwide in November 2025, which is the context any reading of it has to carry.	NO CHANGE
Legislation and regulation	E-commerce legislation	The electronic transactions bill remains in development; the regional layer moved instead, with a paperless customs directive presented at Bissau. The electronic transactions bill sits on the ledger as in development and no enacted commerce statute is held. The movement is regional and sectoral: a Bissau workshop in April 2026 presented the union's paperless customs directive and a planned trade-document exchange platform. Domestic electronic dealing is happening under tax administration rules rather than commerce law, through the platform-only value added tax declaration for customs clearance.	NO CHANGE
Legislation and regulation	Statistics legislation	The 2007 framework law still governs, and the census rests on it. The national statistical system framework law of 2007 is the governing statute and no amendment appears in the base. The system it governs is delivering: the fourth census launched field enumeration in June 2026, the country's first fully digital count since 2009, after the institute opened recruitment for about 5,000 census staff in September 2025.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	Access to information legislation	The access to information bill remains in development, against platform blocking in November 2025. The bill sits on the ledger as in development and nothing in the window records it enacted. What did move went the other way: after the November 2025 takeover coup leaders ordered radio shutdowns and blocked Facebook, YouTube, TikTok and Instagram nationwide, and the transitional council passed a law against false online information six months later.	NO CHANGE
Data protection	Data protection authority	A National Cybersecurity and Data Protection Agency was committed to in January 2025; nothing on the base confirms it exists. 2025-01-22 — the government presented the results of a WARDIP cybersecurity feasibility study and committed to creating a National Cybersecurity and Data Protection Agency, framed by the minister responsible as central to data protection and digital sovereignty. The commitment predates the window and no source since confirms the agency established, staffed or operational. The country therefore has no supervisory authority on the record, and the draft data governance and protection decree approved in July 2025 is not confirmed in force either, so neither the body nor the instrument it would enforce is in place.	NO CHANGE
Data protection	National data protection readiness	Readiness rests on a draft policy decree and an agency still only committed to, with no enacted statute behind either. The base holds no data protection statute for Guinea-Bissau. What it holds instead is a policy decree approved in draft on 10 July 2025 and not confirmed in force, and an agency committed to in January 2025 and not confirmed established. Neither moved in the twelve months to 2026-08-26. No registration or notification regime, no data subject rights case, no enforcement action and no cross-border transfer rule appears on the ledger. The biometric identity network, the civil registry digitisation and the electoral register update reported elsewhere in this report are all proceeding without any of it, which is what the absence costs.	NO CHANGE
Regional collaboration	Regional policy collaboration	Guinea-Bissau joined AUDA-NEPAD's programme for African developing island economies in July 2026, whose roadmap to 2031 includes digital transformation. 2026-07-24 — at the ministerial segment in Abidjan, AUDA-NEPAD launched a Programme for African Developing Island Economies covering Guinea-Bissau among seven states, with ministers adopting a communique committing to a 2026-2031 roadmap on six pillars including digital transformation. It is a continental commitment rather than a national action, and no country-level implementation under it is reported. The country's substantive regional work sits elsewhere on this ledger — the ECOWAS biometric credential and the World Bank's West Africa regional digital programme — and neither is an AUDA-NEPAD instrument. No ECOWAS or UEMOA policy instrument adopted domestically appears in the window.	ADVANCED
Regional collaboration	Regional legal harmonisation	Eight states approved a draft land registration harmonisation directive in June 2026. Two harmonisation instruments moved in the window. Eight member states approved a draft directive harmonising land registration and titling rules across the union in June 2026, and a Bissau workshop presented the union's paperless customs directive and a trade-document platform in April. On identity, a regional consultation opened on a roadmap from national identification systems to the common biometric card. No domestic transposition of any of the three is recorded.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	Shared regional infrastructure	The ECOWAS biometric identity card reached its first reported field issuance, 262 cards to women cross-border traders in Sao Domingos. 2026-03-16 — the National Borders Commission issued 262 ECOWAS biometric identity cards to women cross-border traders in Sao Domingos, Cacheu, under a Guinea-Bissau-Senegal mobility project backed by ECOWAS and financed by GIZ. It is the first field distribution the base records. The standing position is that Guinea-Bissau is one of six ECOWAS states to have fully operationalised the credential, so what moved in the window is use rather than adoption. The only other shared regional asset on the ledger is the ACE submarine cable, reported under international bandwidth. No regional data centre, internet exchange point or interconnection arrangement appears.	ADVANCED
Regional collaboration	Cross-border data transfers	Guinea-Bissau became the first member state to sign the international police privileges agreement and confirmed regional police data participation. The signature of September 2025 is the base's clearest instrument on cross-border data: a privileges and immunities agreement with the international police organisation, and confirmed participation in the West African police information system. The protective side is treaty-based rather than domestic: the three cybercrime conventions ratified in May 2026 and the regional supplementary act on personal data protection.	ADVANCED
Standards	National interoperability standards	Decree 27/2025 sets national interoperability rules and the platform design was delivered in November 2025. The rule and the design arrived within a month of each other: the government approved the national interoperability regulation by decree in October 2025, and consultants delivered the interoperability structure, the platform and a digitisation action plan for the main public services in November. What is not yet on the record is any system exchanging data through it. The interoperability platform on the ledger remains in development.	ADVANCED
Standards	National quality standards	The minister signalled a plan for a national quality and metrology institute in October 2025. Guinea-Bissau has no national standards body in the base. The announcement of October 2025 is a ministerial signal of intent to create a quality and metrology institute, with no statute, budget or premises attached. Until one exists, standards reach the country through adoption rather than issuance — as with the common alerting protocol operationalised in May 2026.	ADVANCED
Standards	Adoption of international standards	The meteorological institute operationalised the common alerting protocol, putting national alerts on search and mapping services. The operationalisation of May 2026 is the country's clearest adoption of an international data standard: the common alerting protocol, which is what makes a national weather warning appear inside general search and mapping services. The other adoptions are financial and regional rather than technical: the payment institution licensing regime of the monetary union and the regional biometric card specification.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	Non-governmental contribution to national policy	Platform blocking followed the November 2025 takeover; a law against false online information followed in May. The channel non-state actors had been using is documented: a preprint maps online networks of around 445,000 followers driving political mobilisation since 2013. It narrowed sharply. Coup leaders ordered radio shutdowns and blocked four major platforms nationwide in November 2025, and the transitional council passed a law against false online information in May 2026. Structured participation continues in donor programmes – a youth dialogue closing with policy recommendations in October 2025.	REGRESSED
Public debate and participation in policymaking	Open discussion of government policy	The transitional parliament passed a law on the dissemination of false information online, and the government first invoked it in July 2026. 2026-05-23 – the transitional parliament passed unanimously, with amendments, a Digital Integrity law on the dissemination of false information on the internet, presented by the government spokesman as aimed at those who spread hate and act against the State. The publication date, the entry-into-force date and the enforcement mechanism – including how it would reach citizens abroad – are not stated in the record. 2026-07-21 – the Ministry of Communication invoked the law for the first time the base records, in denying a claim that TikTok was to be shut down. It is the only instrument on this ledger addressing online speech, and nothing records a court, a regulator or a civil-society challenge testing it. No consultation on the bill appears either.	REGRESSED a new online-falsehoods offence with enforcement left unstated

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	Sustainable domestic financing of digital transformation	The 2026 budget carries a named digital transformation investment line, inside a CFA 83.2bn investment programme. The budget volume names a digital transformation line in the public investment programme covering the financial system, a data centre, communications and an enterprise system – the first identified digital allocation the base holds for Guinea-Bissau. The frame around it is tight: CFA 530.7bn in revenue and spending, a CFA 79.8bn deficit and a CFA 83.2bn investment programme. Revenue reform is the fund programme's own condition, with the payment platform and a taxpayer census named among reform actions.	ADVANCED
MoUs and other agreements	Strategic relationships	The eleventh review disbursed a further US\$1.6m to US\$1.7m, citing revenue administration digitalisation. The credit facility is the relationship that sets the reform agenda. The ninth and tenth reviews disbursed US\$3.2m and extended the arrangement to December 2026, and the eleventh completed in June 2026 disbursing a further US\$1.6m to US\$1.7m. What it asks for is digital: the review confirms the revenue administration platform and a taxpayer census as reform actions. The digital programme itself is separate and larger, launched nationally at US\$60m in August 2026.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	Mobilisation of non-state finance	A MIGA guarantee covers Sonatel's equity investment in Orange Bissau at US\$25.4m, and no new private commitment appears in the window. The standing position is a US\$25,435,357 MIGA guarantee to Sonatel SA covering its equity investment in Orange Bissau S.A., approved for the 2025 financial year as part of a combined Orange Guinea and Guinea-Bissau programme, with nothing disbursed as captured. Nothing in the twelve months to 2026-08-26 records a disbursement, a new guarantee or a second private transaction. The one other private commitment on the ledger is the operator-backed training programme reported under digital literacy, which states no financial value. The fibre backbone the country's connectivity depends on is to be built by a private wholesale operator under exclusive licence, and that operator has not been selected — so the largest private commitment in prospect is not yet a transaction.	NO CHANGE
New investments	Development-partner project financing	A World Bank WARDIP grant and a UNDP digital transformation programme are the standing development-partner financing, neither reporting new movement in the window. Two commitments stand. The World Bank's Guinea-Bissau allocation under the regional WARDIP programme is US\$60.00m in IDA grant plus US\$0.50m of government counterpart, launched in country in April 2025 and carried in the Bank's own project record. UNDP's Mais Digit@l programme committed US\$3,360,500 to implement the national digital transformation strategy, of which US\$566,152 is recorded disbursed. No fresher disbursement figure, extension or successor appears in the twelve months to 2026-08-26, and no third development partner appears on the ledger. What this money moved is reported elsewhere: the backbone design and its safeguards study, and the interoperability regulation.	NO CHANGE

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	Mobile penetration	No new penetration series was published; the ledger's own measures remain the base's figures. Nothing in this batch updates the mobile or internet penetration measures the ledger already carries. What moved instead is supply and enforcement: the national fibre backbone tender was relaunched in March 2026 after two cancelled rounds, and the regulator warned that only the licensed satellite operator may sell its service, with illegal resale to face sanctions.	NO CHANGE
Connectivity	Internet usage	Internet use was last measured at 32.5% penetration, 723,000 users, with two-thirds of the population offline, before the window opened. 2025-03-03 — the last measurement the base holds puts internet users at 723,000 and penetration at 32.5%, leaving 67.5% of the population offline. The figure predates the twelve-month window and nothing fresher was published into it: no regulator return, no operator disclosure and no household survey covering internet use appears for Guinea-Bissau. The census reported under Censuses and surveys is the one national data collection inside the window, and its preliminary release carries no connectivity variable. So the direction of internet use over the window is unmeasured, at the point where the national backbone is still in design and satellite is the only service to have entered the market.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	Mobile affordability	No tariff or affordability figure is published; the universal access fund plan is the instrument aimed at the gap. The base holds no Guinean retail tariff, price basket or affordability ratio. The instrument that would address affordability is the universal access fund, which a legal review recommended restructuring in October 2025 and for which a 2026-2031 strategic and financing plan was delivered in May 2026. Neither publishes a price target.	NO CHANGE
Connectivity	National fibre backbone	The WARDIP-GB backbone reached its environmental and social safeguards study in May 2026, on a 2,877 km, 56-node design not yet built. The country has no national fibre backbone. The design for one specifies 2,877 km over 56 nodes in four phases, targeting coverage of more than 99% of the population and operation by a private wholesale operator under exclusive licence; that specification is itself undated and carried at year precision. 2026-05-21 — the environmental and social impact study was published, which is the movement in the window: the project passes from design toward implementation procurement. The starting position was thinner. In August 2025 the country was seeking deployment experience from Chad with no fixed design published, after the programme's launch in April 2025. No construction contract, no selected wholesale operator and no built phase appears on the ledger.	ADVANCED
Connectivity	International internet bandwidth	The ACE submarine cable remains the country's only international fibre link, with a second, ECOWAS-led cable approved at feasibility stage in October 2025. International capacity rests on a single submarine cable. The ACE landing is the country's first and only international fibre-optic connection, live since March 2023, and it is held only as background in a secondary record: no primary on the landing itself is on the base. 2025-10-22 - member-state experts with their technical and financial partners reviewed and approved the feasibility study for a second submarine cable serving Cabo Verde, Liberia, Sierra Leone and Guinea-Bissau, at a workshop the ECOWAS Project Preparation and Development Unit convened in Monrovia. That cable is at feasibility and nothing further: no route, cost, landing site or construction date is published. Nor does any capacity, price or utilisation figure for the existing link appear on the ledger, so the base can state what carries the traffic and not how much it carries. The national backbone that would distribute that capacity inland is still in design.	NO CHANGE a second cable approved at feasibility but not built
Connectivity	Internet Exchange Points	No exchange point is recorded; the national fibre backbone it would sit on is still at tender. Nothing in the base records an internet exchange point in Guinea-Bissau, operating or planned. The domestic network that would justify one is not built: the national fibre backbone tender was relaunched in March 2026 after two prior rounds were cancelled, and the procurement plan records that history.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	Satellite broadband licensing and availability	Starlink has been commercially live since June 2025 under a provisional authorisation from the regulator, and nothing moved in the window. 2025-06-19 — Starlink entered service, Guinea-Bissau's seventh West African and twentieth continental market, following a provisional authorisation from ARN-TIC in April 2025. Both events fall before the twelve-month window. Nothing since records a definitive licence, a second satellite operator, a subscriber figure or a tariff, so what the base holds is the fact of availability and nothing about its reach. An initial provisional licence referred to in the launch record is not itself held. Satellite is the only service reaching what the absent national backbone does not, which is what makes the missing uptake figure matter.	NO CHANGE
Data Storage	Local data centre capacity (all providers)	A data centre appears as a named line in the 2026 budget; no facility or capacity figure is published. No Guinean data centre capacity figure exists in the base, from any provider. What exists is intention with money attached: the 2026 budget's digital transformation line covers a data centre alongside the financial system, communications and an enterprise system, and the cybersecurity feasibility study scopes a national cloud.	ADVANCED
Data Storage	Local data centre capacity (national providers)	The state's own hosting is a budget line and a scoped national cloud, not a facility. The feasibility study of September 2025 scopes a national cloud along with a security operations centre and an incident response team; nothing has been built. The 2026 budget names a data centre inside the digital transformation investment line. Neither source gives a location, a capacity or a delivery date.	ADVANCED
Data Storage	Off-site backup capacity	No backup arrangement is described anywhere in the base for Guinea-Bissau. Nothing in the base states where any Guinean government system's data is copied to, or whether it is. The documents that would say so are forward-looking: the national cloud scoped in the feasibility study and the data centre named in the 2026 budget. Neither mentions redundancy or a second site.	NO CHANGE
Energy	Sufficient energy and water for data centres	The only powered facility on the record is a US\$5m solar-powered medical warehouse. No Guinean data centre exists to have a power provision, so the base's only evidence on powering digital infrastructure is a logistics building: a US\$5m solar-powered warehouse giving the central procurement body real-time medicine tracking. Solar is the pattern where reliability matters, and it is donor-financed in both recorded cases.	ADVANCED
Energy	Grid reliability	No grid reliability figure is published; digital facilities are solar-powered where reliability matters. The base holds no generation, outage or access figure for the Guinean grid. What it holds is the workaround: the medical warehouse commissioned in October 2025 is solar-powered, and the offline learning platform installed for justice-sector training is designed to work without a connection. Both are designed around infrastructure that cannot be relied on.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	Rural electrification	No rural electrification figure or programme appears in the base for Guinea-Bissau. Nothing in the base states rural electricity access, a connection target or an off-grid programme for the country. The only rural infrastructure documented is observational and not yet installed: eleven hydrometeorological stations sited across three southern regions, reported station by station in a third field mission.	NO CHANGE
Technical Capacity	Robustness of government hardware and software	The 2026 budget funds a financial system, a data centre, communications and an enterprise system; none is yet in service. The budget line is the first identified public money for government systems the base holds, covering the financial management system, a data centre, communications and an enterprise system. Against it, delivery has been slow where it is measurable: the fibre backbone tender was relaunched after two cancelled rounds and a master's assessment finds electronic governance thin and blocked by weak infrastructure and the absence of a legal framework.	ADVANCED
Technical Capacity	Local capacity to maintain, manage and develop government systems	Justice-sector staff completed a digital literacy course and terms of reference were issued to train policymakers. Capacity is being added course by course, and all of it is donor-financed. Justice-sector staff completed a digital literacy course with an offline platform installed, and data protection capacity training ran in late 2025. The largest planned intervention is regional: terms of reference issued in May 2026 to recruit academic partners delivering training for policymakers across Guinea-Bissau and three peer states. Tax officials were separately trained on the revenue platform ahead of its September 2025 value added tax rollout.	ADVANCED
Cybersecurity	National cybersecurity readiness	A national cybersecurity strategy sits in a draft decree and the agency to run it is still only committed to. 2025-01-22 — the government presented the results of a WARDIP cybersecurity feasibility study and committed to a National Cybersecurity and Data Protection Agency. 2025-07-10 — the Council of Ministers approved the draft decree for a national cybersecurity strategy. Neither instrument is confirmed gazetted or in force, and both predate the twelve-month window. Nothing in the window moved either. No computer emergency response team, no cybercrime prosecution, no reported incident and no critical-infrastructure designation appears on this ledger, so readiness is a study, a draft strategy and a promised agency, with no operational capability recorded behind them.	NO CHANGE

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	National data exchange system	Decree 27/2025 sets the rules and consultants delivered the platform design; nothing is recorded exchanging data through it. The interoperability platform sits on the ledger as in development, and both of its preconditions arrived in the window: the national interoperability regulation approved by decree in October 2025 and the delivered interoperability structure, platform and digitisation action plan in November. What the base does not hold is any system connected to it. The interoperability regulation for public and private digital services is enacted and in force, and no participant is named.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	Use of digital id in other systems	The regional biometric card was issued to more than 260 women traders at the Senegalese border in March 2026. The clearest documented use of the credential is cross-border trade: a pilot handover at the Guinea-Bissau-Senegal border issued regional biometric cards to more than 260 women traders in March 2026. The direction of travel is regional: a consultation opened in February 2026 on a roadmap from national identification systems to the regional card. Domestically the identity number has not been linked to any other register on the record.	ADVANCED
Data Exchange	Interoperability of health systems	A track and trace mandate came into force in September 2025 and a US\$5m warehouse gives real-time medicine tracking. The pharmaceutical chain is where health data exchange has actually been built: a track and trace mandate centred on the regulator's drug catalogue came into force on 19 September 2025, and a US\$5m solar-powered warehouse gives the central procurement body real-time medicine tracking. The national health platform is being extended separately, with a grant placing Guinea-Bissau among seven countries receiving climate and health data tools, and health data use for decisions named among seven priorities in the 2026-2027 cooperation plan.	ADVANCED
Data Exchange	Interoperability of education systems	A financed programme is building a nationwide school, teacher and student database. The system it replaces produced its last published yearbook for 2014/15, with statistics training beginning across four regions in October 2025. The financed programme confirmed in February 2026 is building a nationwide school, teacher and student database with training on the education planning system and mobile data collection. Separately a monitoring dashboard replaced paper inspection forms, with 78 inspectors covering 568 schools.	ADVANCED
Data Exchange	Interoperability of social protection systems	No social protection register or management system is described for Guinea-Bissau. Nothing in the base names a Guinean social registry, beneficiary database or social protection management system. The delivery mechanisms that exist run through payroll rather than a register: the blockchain wage bill and pensions platform the ledger carries, and the payment institution licensing that made electronic money possible at all.	NO CHANGE
Digital Identity and CRVS	Robustness of system	A third production centre in Biombo took the national network to 18, and the ECOWAS credential reached first field issuance. 2026-02-11 — the contractor Semlex opened a production centre at Safim in Biombo, its third in that region and rated at 100 cards a day, bringing the national network to 18 biometric identity production centres, with further centres planned for Sao Domingos and Bolama. 2026-03-16 — the ECOWAS biometric card was issued in the field for the first time the base records, 262 cards to women cross-border traders in Sao Domingos. Beneath both is a standing position of a functional biometric national identity card system, with Guinea-Bissau one of six ECOWAS states to have fully operationalised the regional credential. What the ledger does not hold is an enrolment total, a coverage rate, an authentication service or any legal instrument governing the system: the movement is in production capacity, not in what the credential does.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	Registration of entire population	The eighteenth identity card production centre opened in June 2026, and a third enrolment centre in February. Coverage is being built through physical estate rather than through a national campaign: a third regional enrolment centre opened in February 2026 and the eighteenth production centre nationwide in June. No enrolment total is published against those centres. The nearest population figure the base holds for an identity-adjacent register is the electoral roll of 966,152.	ADVANCED
Digital Identity and CRVS	National maintenance of id and credentials systems	Production runs on a contractor's network; no statute or state operator is on the record. The identity card production and enrolment network is a contractor's, and the base holds no Guinean statute governing it and no state body named as its operator. What the state does is open centres: eighteen production centres nationwide by June 2026. The regional card scheme is likewise external, with a roadmap consultation opened in February 2026.	NO CHANGE
Digital Identity and CRVS	Authentication	No verification service exists; the identity card is presented rather than queried. Nothing in the base records a service that checks a Guinean identity number against the register. The interoperability rules that would allow one are new – the national interoperability regulation approved by decree in October 2025 and the delivered platform design – and no participant system is named against either.	NO CHANGE
Digital Identity and CRVS	Digital id from birth	Birth registration now happens at school enrolment and in health services, which registered 20,000 children in nine months. Two service points were added to the register in the window. The justice and education ministries agreed in August 2025 to issue birth registration at the moment of school enrolment, and more than 20,000 children were registered through health services in the nine months to June 2025. A third mobile justice caravan using the digital registration system launched in June 2026 for children's birth registration. Registration is not an identifier: no number is assigned at birth on the record.	ADVANCED
Digital Identity and CRVS	Interoperability of birth registration and digital id	Registration reaches new service points but no link from the register to the identity card is described. The register is being pushed outward – to school enrolment, to health services and to mobile caravans – and the base describes no connection between it and the identity card production network. The first fully digital registry office opened in the window, at Santa Luzia, which is a digitisation of the office rather than a link to another system.	NO CHANGE
Digital Identity and CRVS	Use by other systems	The regional card was used for cross-border trade by more than 260 women; no domestic system consumes the identity. The one recorded downstream use is regional rather than domestic: more than 260 women traders received regional biometric cards at the Senegalese border in a pilot handover. Inside the country the registers run on their own identifiers – the tax identification number issued solely through the payment platform and the electoral roll – and none is recorded checking against the identity register.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	Governance role of central bank	The central bank register carries six banks, one payment institution and one electronic money issuer as at June 2026. Payment governance is the monetary union's rather than the country's. The first licensed payment institution in Guinea-Bissau appeared on the union register in September 2025, and the June 2026 register lists six banks, one payment institution and one electronic money issuer. No domestic payments regulator, national switch governance or oversight publication appears in the base.	ADVANCED
Digital Payments and Fintech	G2P functionality	The blockchain wage bill and pensions platform remains the only government-to-person rail described. Nothing in this batch adds to the government-to-person picture beyond the wage bill and pensions platform the ledger already carries. What the window does establish is that the rails around it are thin: one licensed payment institution and one electronic money issuer in the whole country as at June 2026, and only 22 per cent of women holding a bank or mobile money account.	NO CHANGE
Digital Payments and Fintech	Revenue collection	The payment platform became the sole channel for the tax identification number and for value added tax on customs clearance. Two orders in December 2025 made the simplified payment platform compulsory rather than optional: the revenue directorate banned the older financial system and made the platform the sole channel for issuing the tax identification number, and mandated platform-only declaration and payment of value added tax for customs clearance, effective immediately. Staff were prepared for it: tax officials in fiscal districts and regional offices were trained ahead of the September 2025 value added tax rollout. The fund's eleventh review names the platform and a taxpayer census among reform actions.	ADVANCED
Digital Payments and Fintech	B2B and B2G functionality	Importers must declare and pay value added tax through the platform to clear customs, from December 2025. The circular of December 2025 makes business-to-government payment electronic by compulsion: importers declare the tax they have borne on the customs declaration and pay exclusively through the platform. The cross-border trade layer is being built regionally: a Bissau workshop presented the union's paperless customs directive and a planned trade-document exchange platform in April 2026.	ADVANCED
Digital Payments and Fintech	P2P, P2G and P2B functionality	The country gained its first licensed payment institution in September 2025. Retail electronic payment capacity is new and small: the first payment institution licensed under the monetary union appeared on the register in September 2025, and by June 2026 the country had one payment institution and one electronic money issuer. Person-to-government payment is the mature side, through the simplified tax and contribution payment platform the revenue directorate has made compulsory.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	Population uptake	Active electronic-money accounts grew 33.28% in 2024, the union's second-fastest rate, on a regional report published in January 2026. 2026-01-01 — the regional central bank's annual report on digital financial services records Guinea-Bissau's active electronic-money accounts up 33.28% in 2024, the union's second-highest growth rate after Togo, on a 1.94% share of accounts opened union-wide and about 1% of regional transaction value, served by two electronic-money issuing initiatives of the 69 operating across the union. The data year is 2024 and the publication falls inside the window, so what the window holds is the arrival of the figure rather than the growth itself. These are shares within a regional report and not a national release: the base holds no account total, no transaction count and no payments statistic published in Guinea-Bissau. No named mobile-money service, no interoperable switch and no consumer-protection rule for payments appears anywhere on this ledger.	ADVANCED on the regional regulator's 2024 figures
Digital Payments and Fintech	Cross-border functionality	Cross-border capability is the monetary union's; no national instrument is held. Guinea-Bissau's payment rails are union rails, and the base holds no national cross-border instrument. The union register of authorised establishments is the operative list. What is being built across borders is documents rather than money: the paperless customs directive and trade-document platform presented at Bissau in April 2026.	NO CHANGE
Digital Payments and Fintech	Consumer protection	No payment consumer protection instrument appears in the base for Guinea-Bissau. Nothing in the base records a complaints route, a redress rule or a disclosure requirement for Guinean payment users. Authorisation is the only protection documented, and it is the union's: six banks, one payment institution and one electronic money issuer on the register as at June 2026.	NO CHANGE
Registries	Population register	The fourth census launched field enumeration in June 2026, the first fully digital count since 2009. The institute opened recruitment for about 5,000 census staff in September 2025 and launched field enumeration in June 2026, the country's first fully digital census since 2009. The continuous register beside it is the civil register, whose first fully digital office opened at Santa Luzia. No population register linking the two is described.	ADVANCED
Registries	Civil register	Birth registration stands at about 46% of under-fives, with SIREC digitising births, deaths and marriages and no fresher figure since. The Ministry of Justice's civil registration office describes SIREC digitising births, deaths and marriages with UNDP-trained officers, roughly three months into a Bissau-first rollout, against a target of at least 90% registration, with registration of under-fives at about 46% from an undated 23.4% baseline. A parallel account covers the digitisation of civil identification, registry and notary services. Behind them, a UNDP project co-financed by Switzerland built a digitisation centre and software to recover the paper civil-registry books, held at year precision. All of it predates the twelve-month window. No dated confirmation of regional extension, no fresher registration rate and no death or marriage registration figure appears in it.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	Address register	No addressing system, postcode scheme or street register appears in the base for Guinea-Bissau. Nothing in the base records a Guinean address register, a national addressing programme or a postcode scheme. The geographic reference work that is happening is agricultural and meteorological: eleven hydrometeorological stations sited across three southern regions and satellite growing-season monitoring produced by international agencies.	NO CHANGE
Registries	Business register	743 new companies were registered in 2025, up 24 per cent, with formation taking about five hours. The registry's own director general gives the figures: 743 new companies in 2025 against 598 in 2024, with company formation now taking about five hours. It is the one Guinean register in the base publishing a throughput series and a service-time claim. The tax side hardened alongside it, with the tax identification number issued solely through the payment platform from December 2025.	ADVANCED
Registries	Social protection register	No social registry is described; payment runs through the wage bill and pensions platform rather than a beneficiary register. Nothing in the base names a Guinean social registry or beneficiary database. What exists is a payment rail on the ledger — the blockchain wage bill and pensions platform — and a financial system too thin to carry transfers widely: one payment institution and one electronic money issuer nationally, and 22 per cent of women holding an account.	NO CHANGE
Registries	Electoral register	The updated electoral register was handed to the elections commission on 18 August 2026 recording 966,152 voters, unchanged in size from the last update. 2026-08-18 — the electoral register was handed to the elections commission in both physical and electronic form ahead of the 30 August referendum, recording 966,152 registered voters. 2026-08-17 — the operation behind it issued 25,146 replacement voter cards over thirty days from 13 July, worked by 51 brigades covering every region. The electorate total is unchanged from the previous update, so the operation replaced cards rather than added registrants. No audit, no de-duplication statement and no link between the register and the biometric identity system is published. It is the only register on this ledger that moved in the window.	ADVANCED
Registries	Tax register	The tax identification number is issued solely through the payment platform from December 2025, with a taxpayer census as a reform action. The revenue directorate's order of December 2025 bans the older financial management system and makes the payment platform the sole channel for producing and issuing the tax identification number. The register behind it is to be rebuilt: the fund's eleventh review confirms the revenue administration platform and a taxpayer census among the reform actions. No taxpayer count is published.	ADVANCED
Registries	Land register	Eight states approved a draft directive harmonising land registration in June 2026; no domestic register is described. The base holds no account of a Guinean land register, cadastre or titling system. The movement is regional and prospective: eight member states approved a draft directive harmonising land registration and titling rules across the union in June 2026. No domestic transposition or register is recorded.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	Health	A track and trace mandate and a US\$5m tracked warehouse put the medicine chain on a system. The health system's clearest digital asset is its supply chain: a pharmaceutical track and trace mandate centred on the regulator's drug catalogue came into force in September 2025, and a US\$5m solar-powered warehouse gives real-time medicine tracking. The information platform is being extended with a grant for climate and health data tools, and health data use for decisions is named among seven priorities in the 2026-2027 cooperation plan.	ADVANCED
Sectoral management information systems	Education	A monitoring dashboard replaced paper inspections, 78 inspectors covering 568 schools. The dashboard is the base's clearest working education system: 78 inspectors covering 568 schools, replacing paper inspection forms. The statistical side is further behind — the last published yearbook dates to 2014/15 — and a financed programme is building a nationwide school, teacher and student database to fix it. An assessment with 34 stakeholders in November 2025 rated the sector's digital maturity.	ADVANCED
Sectoral management information systems	Social protection	No social protection management system is described for Guinea-Bissau. Nothing in the base names a Guinean social protection management information system, case management tool or beneficiary tracking platform. The programme layer that would use one is documented only at project level, through the peacebuilding fund's June 2025 progress report covering ten projects from electoral law to digital-media training.	NO CHANGE
Sectoral management information systems	Justice	Justice-sector staff completed a digital literacy course with an offline platform installed. The criminal information system sits on the ledger as implemented. What moved in the window is the people around it: justice-sector staff completed a digital literacy course and an offline learning platform was installed. The justice ministry is also the register's operator, running the mobile caravans that carry digital birth registration into communities.	ADVANCED
Sectoral management information systems	Tax	The payment platform is now compulsory for the tax identification number and for value added tax on imports. The platform has moved from a channel to the channel: sole issuer of the tax identification number from December 2025, with the older financial management system banned for the purpose, and exclusive route for declaring and paying import value added tax. It is doing so under external condition: the fund's eleventh review names the revenue administration platform and a taxpayer census as reform actions, with US\$1.6m to US\$1.7m disbursed on completion.	ADVANCED
Sectoral management information systems	Customs	Customs runs on the international customs platform; a regional trade-document platform was presented at Bissau in April 2026. The customs management system sits on the ledger as implemented. Around it, importers must now declare and pay value added tax through the revenue platform to clear customs, which ties the two systems together at the point of clearance. The regional layer is prospective: a Bissau workshop presented the union's paperless customs directive and a planned electronic trade-document exchange platform in April 2026.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	Land	No land management system is described; the regional directive is the only instrument on the record. The base holds nothing on Guinean land administration systems, cadastral mapping or titling workflows. The only relevant document is regional and at draft stage: the directive harmonising land registration and titling rules approved by eight member states in June 2026.	NO CHANGE
Other GovTech and e-Gov	e-government services	A one-stop digitalised transport counter opened at Gabu, the first outside the capital. Electronic government is assessed as thin by the one academic study the base holds: blocked by weak infrastructure and the absence of a legal framework. Against that, delivery has started: a one-stop digitalised transport licensing counter opened at Gabu in March 2026, the first outside Bissau, and the digitisation action plan for the main public services was delivered in November 2025. The national programme launched in August 2026 carries electronic government among its four strands.	ADVANCED

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	ICT infrastructure for local government	The first integrated service counter outside the capital opened at Gabu in March 2026. The structural constraint is stated plainly by a conference that closed in October 2025: three decades of democracy with no local elections yet held, and recommendations for training local technical staff and managers. What has arrived is central service delivery pushed outward: a one-stop digitalised transport licensing counter at Gabu, the first fully digital civil registry office at Santa Luzia, and eighteen identity card production centres nationwide.	ADVANCED
Digitalisation of sub-national government	Digitalisation of local government records	No municipal record system is described; no local elections have been held in three decades. Nothing in the base records a Guinean municipal register, local revenue system or council record platform. The reason is structural rather than technical: a decentralisation conference closed in October 2025 recording that no local elections have been held in three decades of democracy, and recommending the training of local technical staff and managers as a precondition. Bissau city council announced the launch on 9 September 2026 of a modernisation and digital transformation programme for the institution, on a plan approved at its first strategic retreat. No component list, budget, timetable or partner is stated.	NO CHANGE
Rural digital data capture	Digitalisation of rural health clinics	The medicine chain reaches facilities through a tracked central warehouse; no clinic-level system is described. The US\$5m solar-powered warehouse commissioned in October 2025 gives the central procurement body real-time medicine tracking, which is the supply side of rural health delivery. No facility-level record system outside the capital is named in the base. The track and trace mandate governs the product rather than the clinic.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	Digitalisation of rural primary schools	78 inspectors covering 568 schools report through a dashboard rather than on paper. The monitoring dashboard is the base's only evidence of digital reach across Guinean schools, and it is inspection rather than teaching: 78 inspectors, 568 schools, replacing paper forms. An assessment with 34 stakeholders in November 2025 rated the sector's digital maturity, and statistics training began across four regions in October 2025. No count of connected schools is published.	ADVANCED
Rural digital data capture	Digitalisation of rural registry offices	Santa Luzia became the first fully digital civil registry office under the integrated register system. The office at Santa Luzia is the country's first fully digital civil registry office, which makes it the base's clearest measure of how far digitisation has reached outside the capital: one office. Registration itself travels instead: mobile justice caravans carrying digital registration for children and registration at health services, more than 20,000 children in nine months.	ADVANCED
Rural digital data capture	Digitalisation of rural police stations	No station-level system is described; the criminal information system has no recorded deployment outside the capital. Nothing in the base records digital records, connectivity or case management at Guinean police stations outside Bissau. The country's police data commitments are external: participation in the West African police information system, confirmed in September 2025 alongside the privileges and immunities agreement.	NO CHANGE

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	Use of AI in government administration	No artificial intelligence is recorded inside Guinean government administration. Nothing in the base names an artificial intelligence tool, pilot or procurement inside a Guinean ministry or agency. Where officials have engaged with the subject it has been abroad and at forum level: the public works ministry joined an artificial-intelligence-in-infrastructure capacity forum under the Sino-Lusophone framework among more than 120 delegates in June 2026.	NO CHANGE
AI	Use of AI in sectoral management information systems	A grant places Guinea-Bissau among seven countries receiving climate and health data tools for the health platform. The grant confirmed in December 2025 is the only instance in the base of analytic tooling being added to a Guinean sectoral system, and it is one of seven countries in a single programme rather than a national initiative. No tool is recorded in use, and the platform's own priorities are set externally: health data use for decisions named among seven priorities in the 2026-2027 cooperation plan.	ADVANCED
AI	Development of national / regional AI systems	No Guinean artificial intelligence system, model or product is on the record. Nothing in the base records an artificial intelligence system built in or for Guinea-Bissau. The country's engagement is participatory: a Bissau forum on artificial intelligence, ethics and disinformation in November 2025, a training session covering digital content, artificial intelligence ethics and online safety for 22 youth-network leaders, and the Macau capacity forum.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	Control of AI abuse	Ministers of Guinea-Bissau and The Gambia pledged joint action on misinformation as artificial intelligence accelerates it. The response so far is cooperation and framework rather than rule: ministers pledged joint action in June 2026 as artificial intelligence accelerates the spread of unverified information, and a regional framework adopted the same month commits fifteen West African states to information-integrity laws for 2026-2036. The domestic instrument that exists names no technology: the law against the dissemination of false information online, passed by a transitional council that had blocked four platforms nationwide six months earlier.	ADVANCED
ICT Industry	National capacity in DT-related production	No domestic technology production is recorded; equipment is tendered and imported. Nothing in the base records Guinean production of hardware, software or digital services for sale. What is documented is procurement: the employment and vocational training agency tendered a framework agreement for computing equipment in May 2026, and the identity card production network is a contractor's estate.	NO CHANGE
Innovation ecosystem	Technology hubs	An operator's digital centre moved to a structured incubation and acceleration programme in April 2026. Hubs arrived in the window rather than before it. An incubator opened in Bissau in September 2025 training 15 youth entrepreneurs chosen from 52 proposals, and an operator's digital centre moved from ad hoc training to a structured incubation and acceleration programme in April 2026. Both are small and both are externally funded; neither publishes a graduate or survival figure.	ADVANCED
Innovation ecosystem	Tech startup ecosystem	A digital economy fund selected its first cohort of 30 projects in March 2026. The fund and the programme launched together: a digital economy cluster and entrepreneurship fund opened in Bissau in October 2025, and selected its first cohort of 30 digital entrepreneurship projects in March 2026 under the regional digital programme. No investment total, company count or survival figure is published. The 52 proposals to a single incubator in 2025 is the base's only measure of demand.	ADVANCED

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	Digital literacy (civil service)	Justice-sector staff completed a digital literacy course and an offline learning platform was installed. Provision is course-by-course and donor-financed: justice-sector staff completed a digital literacy course with an offline platform installed, data protection capacity training ran in late 2025 with a civic input application piloted, and tax officials were trained on the revenue platform ahead of the value added tax rollout. The policy that would organise it is new: the National Digital Skills Policy decree approved by the Council of Ministers in May 2026.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	Digital literacy (general population)	A government and operator programme stood up its coordination committee in May 2026, to train 1,000 young people a year for four years. 2026-05-07 — a joint decree created the STARTOCODE coordination and monitoring committee, formalising a programme to train 1,000 young people a year over four years in programming, data analysis and cloud computing, with a stated emphasis on women and people with disabilities. The record is the operator's own announcement. It is the only digital skills programme on this ledger and the only training commitment of any kind. No enrolment figure, no first cohort and no completion is reported, so what exists is the governance structure rather than evidence of training delivered. No measurement of digital literacy in the population appears anywhere on the base for Guinea-Bissau.	ADVANCED
Training and skills	DT-related training in secondary education	No secondary computing curriculum is described; the education programme is about data rather than teaching. Nothing in the base states whether Guinean secondary schools teach computing, or to how many pupils. The education technology work that is documented is administrative: a nationwide school, teacher and student database and a maturity assessment with 34 stakeholders in November 2025. The digital skills policy approved in May 2026 is the instrument that would set a curriculum, and its text is not held.	NO CHANGE
Training and skills	DT-related university facilities and qualifications	A Portuguese polytechnic opened 2025/26 places for Guinean students in informatics and telecommunications. Domestic provision is thin and physical: a regional university reported 90 per cent readiness with 60 computers en route for the 2025/26 intake, and the vocational training agency tendered a computing equipment framework in May 2026. Degree-level provision is partly abroad: a Portuguese polytechnic opened 2025/26 places for Guinean students in informatics and telecommunications under a collaboration protocol.	ADVANCED
Training and skills	Graduates entering DT ecosystem	No graduate count or destination series exists for Guinea-Bissau. Nothing in the base counts Guinean technology graduates, or where they go. The cohorts that are counted are small and programme-shaped: 15 entrepreneurs from 52 proposals at one incubator, 30 projects in a fund's first cohort, 22 youth-network leaders trained in digital content and online safety and 50 women completing a digital security and financial literacy trainer course.	NO CHANGE
Research institutions	Think tanks and academic departments contributing to DT policy	A master's dissertation finds electronic governance blocked by weak infrastructure and no legal framework. Two pieces of research bearing on Guinean digital policy appeared in the window, and neither was produced by a Guinean institution. A master's dissertation at a Portuguese polytechnic finds electronic governance thin, blocked by weak infrastructure and the absence of a legal framework, and a preprint maps the online networks of around 445,000 followers behind political mobilisation since 2013. The domestic research network the ledger carries remains planned.	ADVANCED

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	Citizen feedback portals	A youth feedback platform launched on text message and messaging apps in October 2025. The platform launched on 1 October 2025 with an international agency and a mobile operator is the base's only citizen feedback channel for Guinea-Bissau, and it is youth-specific. A second was piloted rather than launched: a civic input application in late 2025. No response or resolution figure is published for either.	ADVANCED
Access to services	Citizen participation in policy	A youth dialogue closed with policy recommendations weeks before platforms were blocked nationwide. Structured participation was running: a youth leadership dialogue closed with policy recommendations in October 2025, and the peacebuilding fund's progress report covers ten projects from electoral law to digital-media training. The channel narrowed a month later: radio shutdowns and a nationwide block on four major platforms after the November 2025 takeover, followed by a law against false online information in May 2026.	REGRESSED
Access to services	Gender equity	Women hold 49 per cent of the legal rights men hold and 22 per cent have an account. The gender data landscape published in April 2026 is the first sex-disaggregated evidence the base holds for Guinea-Bissau: women hold 49 per cent of the legal rights men hold, and only 22 per cent have a bank or mobile money account. The training response is small and counted: 50 women completed a seven-day digital security and financial literacy trainer course in July 2026, and more than 260 women traders received regional biometric cards at the border in March.	NO CHANGE a first count with no earlier figure behind it
Access to services	Inclusion of persons with disabilities	An agency delivered mobility and computing equipment to the national disability federation for data advocacy. The delivery of February 2026 – wheelchairs, crutches and a computing kit to the national disability federation for data advocacy – is the only disability-related digital record the base holds for Guinea-Bissau. No disability statute, accessibility standard or disability-disaggregated access figure appears anywhere in the file.	ADVANCED
Access to services	Inclusion of refugees and IDPs	32 refugees and 37 returnees recorded at 31 May 2026. The agency's operational data records 32 refugees and 37 returnees for Guinea-Bissau at 31 May 2026. The population is small enough that no dedicated registration, documentation or service system is described for it, and none appears in the base.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital divides	Bridging of digital divides	A 2026-2031 universal access fund plan sets targets for closing the coverage gap. The instrument was found wanting first: a legal review recommended restructuring the universal access fund in October 2025. The 2026-2031 strategic and financing plan followed, and the network it would fund is still at tender: the fibre backbone relaunched in March 2026 after two cancelled rounds. Regionally, five states evaluated bids for a second submarine cable in Abuja in July 2026. 2026-09-07 - the first measurement of adolescent access the base holds is academic: a survey of 2,039 Bissau adolescents finds computer and internet access limited and unevenly distributed, skewed against girls and against pupils in state schools, the pandemic having exposed rather than created the gap. It covers the capital rather than the country, and no official measurement of adolescent device or internet access exists at any date to set beside it.	ADVANCED

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	National strategy for development of statistics	No statistics development strategy is held; the 2007 framework law and the census are the system's whole record. The base holds no Guinean national strategy for the development of statistics. What it holds is the statutory frame and the operation: the 2007 framework law on the ledger, and the fourth census launched into field enumeration in June 2026 after recruitment opened for about 5,000 staff.	NO CHANGE
National statistics	Censuses and surveys	The fourth census released preliminary results in July 2026 putting the population at 2,191,202, in the country's first fully digital count. 2026-07-23 — the national statistics institute released preliminary results of the fourth General Population and Housing Census: a population of 2,191,202, 50.7% women and 45.7% urban, across 304,939 households and 559,303 dwellings, against 1,449,230 at the 2009 count. It is the country's first fully digital census, collected by computer-assisted personal interview and leaving a digital cartography and technology base for future operations, with UNFPA as lead technical agency and World Bank support for the statistical capacity behind it. Full tabulations are pending. One record's headline population differs from its own body and from the other two, and the base resolves it against them. No statistics law, no national strategy for the development of statistics and no other survey appears on this ledger.	ADVANCED
National statistics	Statistics from administrative data	Civil registry professionals were trained in data skills in August 2025. The training of August 2025 is the base's only evidence of statistical capacity being built inside the register that produces vital statistics. The administrative streams that would feed a compilation are themselves being rebuilt — the education database, the school inspection dashboard and the tax platform — and none is recorded reaching the statistics institute.	ADVANCED
Open data	Use of open data	No open data portal or dataset release is recorded; the national summary data page is the only routine publication. The base holds no Guinean open data portal, licence or dataset catalogue. Routine publication is limited to two instruments the ledger already carries: the fund's national summary data page, and the state budget volume published with the 2026 budget. The access to information bill that would create a right of access remains in development.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	Agricultural use of satellite data	The 2025 cereal harvest came in 18 per cent above average, with satellite data flagging localised dry spells. Two international agencies produce the country's satellite agriculture monitoring. A rainy-season bulletin published rainfall, vegetation index and forecast data through August 2025, and a country brief of February 2026 puts the 2025 cereal harvest 18 per cent above average with satellite data flagging localised dry-spell shortfalls. No Guinean agency is recorded operating an imagery capability of its own.	NO CHANGE
Use of satellite data	Meteorological use of satellite data	The meteorological institute operationalised the common alerting protocol, surfacing national alerts on search and maps. The operationalisation of May 2026 puts Guinea-Bissau's weather alerts into general search and mapping services, which is the first time the institute's output reaches the public through a standard channel. The observing network beneath it is still being sited: a third field mission reported station-by-station findings for eleven hydrometeorological stations across three southern regions.	ADVANCED

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	USA / hyperscaler MoUs, engagements and commitments	No United States digital engagement is recorded for Guinea-Bissau. Nothing in the base names a United States agency, development finance instrument or cloud company in connection with Guinean digital infrastructure. The financing relationships that do exist are multilateral: the fund's extended credit facility and the US\$60m regional digital programme launched in August 2026.	NO CHANGE
China activities	Chinese MoUs, engagements and commitments	The public works ministry joined an artificial intelligence capacity forum under the Sino-Lusophone framework. The forum of June 2026 on artificial intelligence in infrastructure, convened under the Sino-Lusophone cooperation framework among more than 120 delegates, is the base's only record of Chinese digital engagement with Guinea-Bissau. No instrument, financing or system follows from it, and no Chinese vendor appears anywhere else in the unit's file.	ADVANCED
EU activities	EU MoUs, engagements and commitments	European funding runs through programmes rather than instruments – the justice caravans are one. No European Union memorandum or country digital programme appears in the base for Guinea-Bissau. What appears is co-financing of specific operations: the third mobile justice caravan launched jointly with the development programme in June 2026, using the digital registration system for children's birth registration. European involvement is otherwise institutional and educational: a Portuguese polytechnic opening places for Guinean students in informatics and telecommunications.	ADVANCED
Gulf/UAE activities	Gulf MoUs, engagements and commitments	No Gulf state digital engagement is recorded for Guinea-Bissau. Nothing in the base names a Gulf state, sovereign fund or operator in connection with Guinean digital infrastructure, financing or skills. The country's external digital financing is multilateral and regional: the US\$60m programme launched in August 2026 and the fund's credit facility reviews.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
India activities	India MoUs, engagements and commitments	No Indian digital engagement is recorded for Guinea-Bissau. Nothing in the base names an Indian agency, credit line, training programme or system in connection with Guinea-Bissau's digital estate. Where the country's officials have travelled for technology capacity building it has been to the Sino-Lusophone forum in Macau rather than to an Indian programme.	NO CHANGE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
RNEP-GB / WARDIP-GB Final Report (Apr 2025)	The RNEP-GB / WARDIP-GB Final Report itself, which would date and confirm the backbone design specifics (2,877 km, 56 nodes) currently resting on an undated project-website primary.	not yet probed
Artificial intelligence policy discourse	A national artificial intelligence strategy, an AI provision inside the data governance policy, or a regulator guideline on automated decision-making.	2026-09-04
