

PROGRESS REPORT

Morocco: progress report, September 2025 – September 2026

Edition of 2026-09-09-2 · compiled by Claude Opus from the documents in the Corpus repository

GOVERNANCE · FINANCE · ICT INFRASTRUCTURE · DPI · DIGITALISATION · TECHNOLOGY · CAPACITY · INCLUSION · DATA · GEOPOLITICS · WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the base tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the base holds nothing on that indicator. **That is a statement about this base, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-09-01 to 2026-09-09.

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Digital transformation strategy	Digital Morocco 2030 has been in force since September 2024 and picked up a US\$250m acceleration programme in June 2026. The strategy's stated targets include a place in the global top 50 for electronic government and 100,000 people trained by 2030, and the technology sector was 6.8 per cent of gross domestic product on a 2025 figure (strategy). A US\$250m programme was attached to it in June 2026 (programme). Two held sources give the 2030 jobs target as 150,000 and as 240,000, and the base holds no progress report against any of the targets (programme).	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	ICT strategy	Digital Morocco 2030 is the standing strategy, launched by the ministry in September 2024. The ministry's own launch page is the primary record of the strategy the ledger carries, and no successor or revision has been published. What has moved under it is delivery rather than doctrine: a simplification drive that has digitised more than 2,700 procedures and cut paperwork by 45 per cent in pilot zones, and the interoperability platform recorded live in August 2025 with its binding legal framework still pending.	NO CHANGE
Strategies, plans and policies	Broadband strategy	The 5G licence specification carries the country's only published coverage commitments: a quarter of the population by end-2026 and 70 per cent by 2030. The regulator's own instruction report sets a coverage floor of eight cities plus airports by November 2025, 25 per cent of the population by the end of 2026 and 70 per cent by the end of 2030, on a maximum of three twenty-year renewable licences (instruction report). It corrects a conflicting figure held elsewhere in the base. The bidders' own coverage commitments are not disclosed in the report, and no separate national broadband plan is held.	ADVANCED
Strategies, plans and policies	Data storage / cloud strategy	A Cloud First policy makes cloud the mandatory default for public technology investment, and a cloud roadmap to 2030 sits behind it without published targets. The policy made cloud the mandatory default for public-administration technology investment, with a national cloud observatory scheduled for 2027 that is not established (policy). The roadmap sets six objectives and twenty-one intervention domains, a national cloud marketplace through the development agency, sovereign cloud under the qualification decree, and a national reference architecture promised from 2026; its claimed economics are a fifth to a third off procurement cost and MAD 100bn by 2030, and its formal targets, budget and milestones are still absent (roadmap).	ADVANCED
Strategies, plans and policies	Data interoperability framework / roadmap	The AI Made in Morocco roadmap names a digital commons platform, a twenty-interface library and once-only exchange, on a trade-press account rather than a published text. A trade-press account of January 2026 sets out ten programmes under the roadmap, of which the data and interoperability strand names a digital commons platform, a library of twenty application interfaces and a once-only principle (programmes). No ministry document setting out an interoperability framework or roadmap has been published, so the strand is on record only as reported and carries no timetable, custodian or list of participating administrations (roadmap).	ADVANCED
Strategies, plans and policies	AI strategy	An AI Made in Morocco roadmap has been named by the ministry since January 2026, and no text of it has been published. The roadmap was named at a national event on 12 January 2026, framed there as consolidating the country's 2030 artificial-intelligence programme, and repeated at subsequent signings (launch, seminar). A trade-press account describes ten programmes across trust, infrastructure, data, skills and a national Darija and Amazigh language model at alpha stage (programmes). No roadmap document is on file: every reference is a ministry statement.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Data localisation policies	Sensitive data must be hosted exclusively on national territory, a cloud qualification decree awaits its implementing order, and a classification guide sets the categories. Law 05-20 article 11 mandates exclusive national hosting of sensitive data and article 49 sets a fine of MAD 200,000 to 400,000, doubled on repeat, while article 53 defers force to implementing texts and the definition of sensitive data sits in an unheld decree (law). Decree 2-24-921 was gazetted in February 2025 and is not in force: neither the qualification order nor the list of qualified providers is held, and level-2 qualification would require processing and storage exclusively on national territory and Moroccan majority ownership (decree). A national data classification guide categorises data by sensitivity and requires sensitive data to be stored domestically; its own text, issuing body and date are not held (guide).	ADVANCED
Strategies, plans and policies	Data governance policy	Data governance rests on the 2009 protection law and the regulator's deliberations, not on a policy instrument. The 2009 law creates the protection commission and remains the founding statute. The commission governs by deliberation rather than by published policy: it issued five deliberations in November 2025 on cookies, newsletters, patient tracking and access-control data. The governance layer that would sit above them is not published. The interoperability platform is live and its binding legal framework is still pending.	NO CHANGE
Strategies, plans and policies	Open data policy	The open-data programme has four published procedure volumes and a four-strand action plan, with a steering committee of ten bodies established in December 2019. The published procedure set runs to manuals for open-data officers and data managers from April 2021, a data-inventory methodology from February 2023 and a standards and formats manual from December 2024 (inventory methodology, standards manual). A steering committee of ten bodies was established in December 2019 and a readiness assessment carried out in 2020, after which a four-strand action plan covering legal, technical, organisational and usage work was adopted (governance). The assessment report itself is not held.	ADVANCED
Legislation and regulation	Data protection legislation	Law 09-08 has been in force since 2009, and the regulator states on the record that a recast is now in the legislative circuit. The commission's president stated in August 2026 that a recast developed with the justice ministry has been sent to the government's general secretariat, describing it as clarification rather than replacement (statement, account). No transmission date or text is held (framework bill). The statute's own text and gazette reference are not held either, nor any amending instrument, and a 2023 amendment survives only as an analyst's attributed statement (guide).	ADVANCED
Legislation and regulation	Cybersecurity legislation	Law 05-20 on cybersecurity has been in force since July 2020, with its own article 53 deferring effect to implementing texts the base does not hold. The law sets outsourcing conditions in article 12 and penalties in article 49, and defers its force to implementing texts in article 53 (law). The decree defining the sensitive data the law turns on is not held, so the statute is on the books and the base cannot establish which processing it reaches. No prosecution, enforcement action or compliance count under it is recorded.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	Legislation covering digital id	Law 72-18 creates the population and social registries, the civil and social digital identifier and the register agency, deferring force to implementing texts. The statute was promulgated by dahir in August 2020 and creates the national population register, the unified social register, the civil and social digital identifier and the national register agency (law). Articles 19 and 22 carve out defence and security processing, and article 45 defers force to implementing texts. The base holds no implementing decree, so the identifier's legal operation cannot be established from the statute alone.	ADVANCED
Legislation and regulation	Digital payments legislation	Law 103-12 defines electronic money, payment accounts and non-bank payment institutions under central bank approval. The banking law of 2014 is the statutory basis for Moroccan payment institutions, and no amending statute appears in the base. What governs conduct is made under it rather than beside it: the interchange cap cut to 0.50 per cent from 1 October 2026 by the central bank and the competition authority, and the consolidated forex rulebook in force from 1 January 2026.	NO CHANGE
Legislation and regulation	Legislation enabling data interoperability	A Digital X.O framework bill sits with the government's general secretariat on three pillars, one of them interoperability on traceable consent. The bill was under review by the general secretariat in November 2025, on pillars of data governance, sectoral digital identity, and interoperability resting on traceable consent (bill, account). The ministry frames it as sitting under the 2009 data-protection law rather than replacing it. No text, article count or tabling date is on record, and nothing has been published about it since.	ADVANCED
Legislation and regulation	AI legislation / regulations	The electoral organic law carries the only enacted artificial-intelligence offences, while a private members bill on regulating the technology has not moved. Organic law 53.25 enumerates artificial-intelligence tools as a means of commission on four electoral offences and creates a new article punishing the fabrication of election disinformation with two to five years and a fine of MAD 50,000 to 100,000, upheld against a press-freedom challenge (offences). The constitutional court found nothing unconstitutional in December 2025 (decision, tabling). A seventeen-article private member's bill setting fines of MAD 50,000 to 500,000 has been before the chamber's bureau since January 2025 with no committee report (bill, roundup).	ADVANCED
Legislation and regulation	E-commerce legislation	The 2026 forex rulebook raises the electronic commerce allowance for accredited start-ups to MAD 2m. Electronic dealing rests on the trust services law of 2020, which governs signatures and certification providers and replaced parts of the earlier electronic exchange law. The constraint that actually binds cross-border sellers is exchange control, and it loosened: the 2026 general instruction raises the electronic commerce allowance for accredited start-ups to MAD 2m and the individual ceiling to MAD 20,000, inside a 256-article consolidated rulebook in force from 1 January.	ADVANCED
Legislation and regulation	Statistics legislation	Law 046.26 creates a national statistical information council, replacing a governing decree of 1968. The system had been governed by a 1968 royal decree creating a statistics coordination committee, which remained the operative law for fifty-eight years. The replacement moved quickly: approved by the government council on 2 July 2026, adopted unanimously by the second chamber on 13 July with the companion law reforming the planning commission, and promulgated on 28 July as a 51-article statute splitting the statistical and evaluation functions.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	Access to information legislation	Law 31-13 has been in force since 2018 and the commission it created publishes no annual reports, though its own article 22 requires them. The law was promulgated by dahir in February 2018 and created the access-to-information commission, with article 30 deferring entry into force by a year and proactive-publication duties by a further year (law). The commission publishes no annual reports despite the duty in article 22, so eight years on the base holds the statute, the institution and no measure of requests made, granted or refused under it.	NO CHANGE
Data protection	Data protection authority	The commission runs a public national register of declared processing under the 2009 law and signed a cooperation memorandum with Portugal in February 2026. The data-protection authority set out in a communiqué of 28 August 2026 the rules binding political parties, candidates and artificial-intelligence-generated content during the legislative campaign (communiqué), having earlier set out the requirements for processing personal data in the elections (guidance). The national register was first published in January 2023, covering installations from the commission's own creation to the end of 2022, with a definitive-format version in February 2023 and a separate complaints and controls register public from March 2023, operating under articles 45 to 50 of the law (register). A cooperation memorandum with the Portuguese authority was signed on 8 February 2026, covering exchange of information and technical expertise on artificial intelligence, synthetic media and digital violence; the text is not held (memorandum).	ADVANCED
Data protection	National data protection readiness	Smart patrol vehicles carrying live facial recognition entered service in Rabat in July 2026, five years into a case-by-case authorisation regime whose public-highway question is still open. The commission replaced a lapsed moratorium with a case-by-case prior-authorisation regime at the end of 2020, conditioning future authorisation on routing through a national trusted-third-party identity system and flagging controllers building their own biometric databases, sometimes hosted abroad (regime). It decided hearings on video surveillance in March 2025 and had published no deliberation by August 2026, treating facial recognition on the public highway as an open question (hearings). Patrol vehicles with live facial recognition, automated number-plate reading and in-vehicle access to the central database entered field service in Rabat in the week of 20 July 2026, with two further cities announced; neither held account cites a data-protection authorisation, a legal basis, a retention rule or an oversight mechanism (patrols, account).	REGRESSED live facial recognition entered field service with no authorisation, legal basis or retention rule cited in either account held

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	Regional policy collaboration	Morocco was elected to the African Telecommunications Union council for 2027-2031 and signed digital instruments with Gabon and Ghana. The seat was won at the union's twenty-sixth plenipotentiary conference in July 2026, on a delegation combining the digital ministry, the regulator and the development agency; the country offered three of its own programmes to other African states at the same conference (election). A protocol with Gabon on digital skills was signed at a Marrakech exhibition in April 2026, with capacity-building commitments directed at Gabon and no value, term or timetable stated (protocol). A statement of intent with Ghana covering digitalisation, open government, artificial intelligence, data governance and exchanges of experts was signed in Rabat in May 2026, again with no value or term (statement). A memorandum with the UN Economic and Social Commission for Western Asia, signed in Rabat in September 2026, establishes a framework for regional cooperation on modernising public administration and advancing digital governance reform. No programme, value or deliverable is stated for it.	ADVANCED
Regional collaboration	Regional legal harmonisation	The 1989 Maghreb Union treaty is in force with a binding judicial organ and no summit since 1994. The treaty concluded at Marrakesh in 1989 supplies a legal frame for regional harmonisation and a judicial organ whose rulings bind, and no summit has been held since 1994. Harmonisation therefore happens elsewhere: through data-protection accession instruments the ledger carries, and through continental cross-border data exchange pilots – a US\$38m hub launched with the development programme in September 2025 to steer artificial intelligence and digital public infrastructure uptake across Arab states and Africa.	NO CHANGE
Regional collaboration	Shared regional infrastructure	Host-country agreements were approved for a continental development agency office and a regional cyber-incident centre, and the country joined a cross-border rails pilot. Both host-country agreements were approved by the council of ministers on 9 April 2026; the development agency office is not on record as established, and the cyber-incident coordination centre has no site, budget, staffing or opening date (office, centre). Morocco was selected in May 2026 as one of the first three countries to implement shared cross-border rails for identity, payments and trusted data exchange, on a two-stage assessment of political commitment, regulatory alignment, technical capacity, private-sector engagement and the maturity of national digital systems; no Moroccan implementation plan, budget or timetable is published (pilot).	ADVANCED
Regional collaboration	Cross-border data transfers	Continental data-exchange guidelines drafted under Moroccan chairmanship remain unpublished, a ledger-based pilot names the country, and Convention 108 has been ratified since 2019. Eleven member states convened in Rabat in July 2025 to draft the continent's first cross-border data exchange guidelines under Moroccan chairmanship of the agency council, and no guidelines were on record a year later (drafting). Morocco is one of three pilot states for a cross-border data exchange on a distributed-ledger reference architecture owned by the continental trade secretariat, with no Moroccan implementing body, start date or budget named (pilot). Convention 108 was ratified during 2019; the Council of Europe's 2012 opinion named two defects in the domestic law, its exclusion of public-safety and law-enforcement processing and a definition of sensitive data omitting sexual life and criminal convictions, and the base holds no record that either was closed (opinion).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	National interoperability standards	The interoperability platform is live and its binding legal framework is still pending. The implementation report of August 2025 records the platform in service and the framework that would oblige systems to use it not yet in force — capability without compulsion. The standards beside it are being set: a national data classification guide on the ledger and the protection commission's deliberations on specific processing categories.	ADVANCED
Standards	National quality standards	Median mobile speeds fell through the first six months of 5G, and the quality-of-service annex of the licences is withheld as confidential though binding. A measurement firm's series puts the 5G median down 38 per cent from 261.7 Mbps at launch to about 160 to 165 Mbps at month six, the 4G median down 28 per cent, and the combined median at 44.59 Mbps against 44.4 Mbps a week before launch (measurements). Three licences were awarded and gazetted individually, and the specification's five annexes on shareholding, frequencies, coverage engagements, quality of service and interference procedure are withheld as confidential though binding, with the Arabic text prevailing in court (licences, tender). The regulator stated it would assess operators after the first operational year.	MIXED published median speeds fell through the first year of 5G while the binding quality annex of the licences stays confidential
Standards	Adoption of international standards	The national information-security directive is structured on an international standard, and the new biometric passport carries a chip to the civil aviation standard. Circular 02/2023 put version 2.0 of the national information systems security directive in force, structured on ISO 27002, covering state bodies and all infrastructures of vital importance, with entities given six months to schedule conformity (directive). The passport decree approved in July 2026 specifies an encrypted chip to the International Civil Aviation Organization standard and four languages including Amazigh (decree, account). No conformity count, certification register or audit against either standard is held.	ADVANCED
Public debate and participation in policymaking	Non-governmental contribution to national policy	A public argument for statutory platform responsibilities was made in the press in August 2026 by an association specialist and a researcher, against blanket blocking. A cybersecurity specialist from a digital-trust association and a social researcher argued that unrest had exposed gaps in the country's platform-regulation framework, warning against blanket platform blocking or breaking encryption and calling instead for statutory platform responsibilities, notice-and-response mechanisms and account-verification rules (argument). It is commentary rather than a state position, no such bill is held, and the base records no earlier instance of organised non-governmental input into digital policy against which to set it.	NO CHANGE a first record of the debate with nothing earlier behind it

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Public debate and participation in policymaking	Open discussion of government policy	The ombudsman called publicly in August 2026 for administrative reform to be made one policy under a single lead, after finding agencies still demanding paper the law says they may not. The ombudsman's 2025 report found agencies still asking for paper copies of documents already held electronically and imposing undisclosed extra conditions, contrary to the simplification law; the finding reaches the record through a member's written question to the ministry, and no ministry answer is held (report). A vigilance memorandum of 24 August 2026 calls for simplification, digitisation and deconcentration to be coordinated as one workstream under a single, clearly located government lead, and proposes a national system for evaluating administrative performance on service quality, ease of access, delivery times, user satisfaction and how far administrations act on complaints (memorandum). The measurement architecture it proposes does not exist. The spyware allegations are argued rather than adjudicated. Two Moroccan commentaries on 8 September set out the domestic case: an academic rejected as overstated the July 2026 consortium findings tying Moroccan bodies to the compromise of the Spanish prime minister's phone, and a press analysis asked whether the Spanish courts will reopen a related file (commentary). Neither the findings nor any court filing is held.	ADVANCED

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	Sustainable domestic financing of digital transformation	The ministry's own series stops at a MAD 1,758.7m investment appropriation for 2024, with no 2025 or 2026 figure published. The 2024 investment line stands at MAD 1,758.7m against MAD 85.8m for personnel and MAD 187.8m for materiel, and is the latest year in the ministry's published budget-by-chapter series (series). The same series runs MAD 11.7m in 2021, MAD 246.7m in 2022 and MAD 1,249.2m in 2023 (series), so the investment line grew by two orders of magnitude in three years and then stopped being published.	NO CHANGE no appropriation published since the 2024 line
MoUs and other agreements	Strategic relationships	Three vendor frameworks are on file and none carries a sum: with Orange on artificial intelligence, on a private 5G laboratory, and with Vodafone Business. The ministry signed with Orange in Casablanca on 4 June 2026 at a second artificial-intelligence summit, advancing the institutes programme with no sum attached (memorandum). A vendor agreed to supply a private 5G platform for an operator laboratory at an April 2026 exhibition, with a catalogue targeting smart logistics, utilities and energy (agreement, exhibition). A memorandum with Vodafone Business signed in April 2025 for smart-city and energy-management solutions has had no delivery, expansion or sum reported since (framework).	ADVANCED
New investments	Mobilisation of non-state finance	A corporate venture fund of US\$250m is reported operating, writing cheques of up to US\$5m into regional start-ups. The fund was reported operating in August 2026, with no establishment date on file (report). The figure is attributed by the reporting outlet to a third-party tracker and no Moroccan disclosure is on file, so the base holds a private commitment of that size on one indirect account and nothing on what it has deployed.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
New investments	Development-partner project financing	A US\$250m digital transformation programme was approved in June 2026, alongside a US\$70m identity and targeting project and an earlier EUR 459.8m policy loan. The acceleration programme is US\$250m over five years, approved and signed in June 2026 with effectiveness targeted before 23 September 2026 and conditions for entry into force outstanding (programme, account). A second identity and targeting project of US\$70m was approved in December 2024 with no disbursement or delivery reported since (project). A first financial and digital inclusion policy loan of EUR 459.8m was issued in May 2020 and no second operation in the series is on file (loan); the base holds the programme document and no completion or results report (loan).	ADVANCED

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	Mobile penetration	The regulator's own observatory puts the mobile park at 57.06m and penetration at 154.93 per cent, with the park down slightly year on year and 5G in service since November 2025. Independent measurement put median 5G speed down 38% in six months, from an opening figure near 267 Mb/s (measurement) — a fall in service quality as subscriber numbers rise. The first regulator-published periodic observatory, for the first quarter of 2026, gives a mobile park of 57.06m, down 0.58 per cent year on year, penetration of 154.93 per cent, outgoing traffic down 18.79 per cent and messaging down 9.12 per cent, with sector revenue up 2.89 per cent (observatory). Three operators launched 5G on the same day in November 2025 on 3.5 GHz and 700 MHz (launch, account). A dual-band deployment on rail and motorway corridors entered commercial service in 2026 with no additional sites built; the regulator put that operator at 19.4m mobile subscriptions and a 34.04 per cent share at the end of March 2026 (deployment).	MIXED subscriber numbers rose while measured 5G speed fell
Connectivity	Internet usage	5G reached 3.2m subscribers by March 2026, 8.4 per cent of mobile-internet users, from 2.63m at the end of 2025. The regulator's figures, as reported by a measurement firm, give 3.2m 5G subscribers at March 2026 and 8.4 per cent of mobile-internet users, up from 2.63m and 38 per cent outdoor population coverage at the fourth quarter of 2025 (figures). Morocco is the only market in that comparison publishing a 5G subscriber count, which is itself the finding: the number exists here and nowhere else in the set.	ADVANCED
Connectivity	Mobile affordability	Mobile interconnection tariffs entered a transitional reduction in July 2026 and reach full symmetry in February 2027. The transitional phase runs from 1 July 2026 to 31 January 2027, with full symmetry from 1 February 2027 (phase). The record of it is the operator's own half-year filing; the regulator's decision text is not held, and no retail price, basket or affordability measure for the country is held at all.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	National fibre backbone	Fibre to the home reached 1.5m lines, about half of wireline internet, with passive sharing opening commercially and joint ventures holding shared assets. The regulator's first-quarter 2026 observatory gives fixed lines at 3.262m, up 5.05 per cent, and fibre to the home at 1.5m, about 52 per cent of wireline internet (observatory). Technical prerequisites for passive infrastructure sharing were completed in April 2026 with commercial opening scheduled for 27 April over a 40,000-line lot (sharing); the date is the operator's own filing and no source confirms the opening happened (sharing). Two operators formed joint ventures on shared fibre and mobile-site assets in April 2025, with no further reporting on file; the regulator flagged uneven low-density coverage as a risk of the shared model (joint ventures).	ADVANCED
Connectivity	International internet bandwidth	The Medusa subsea cable selected its optical supplier in July 2025 and no Moroccan landing date has been published. The supplier was selected in July 2025 and nothing further is on file; the system was announced in 2022 and landing agreements are held with licensed local operators (supplier). No capacity, price or utilisation figure for international bandwidth is held for the country, so the base records one cable in progress and no measure of what the country already has.	NO CHANGE
Connectivity	Internet Exchange Points	The two exchanges carry 210 Gbps and 30 Gbps across three members each, with net contraction over twelve months. A turnkey contract to build a national internet exchange point was documented by the regulator in December 2023. What the trackers show is small and shrinking: the larger exchange at 210 Gbps across three members and the Casablanca exchange at 30 Gbps across three, with net contraction over the trailing twelve months. Three members is not a peering fabric for a market this size.	REGRESSED
Connectivity	Satellite broadband licensing and availability	Starlink has no licence eighteen months after incorporating a local subsidiary, while a satellite terminal licence was renewed in February 2026 to 2035. The subsidiary was incorporated in November 2024 with capital of MAD 1,000 and still had no authorisation in May 2026, with regulator negotiations reported continuing and the operator's own map listing the service date as unknown (status, subsidiary, observation). A licence requires a competitive call under the telecommunications law and security clearance, which is the procedural reason the base records rather than a refusal. The incumbent's satellite terminal licence was renewed in February 2026 for a further ten years to 2035 (renewal).	MIXED an incumbent terminal licence renewed to 2035 while the low-orbit operator is still unlicensed
Data Storage	Local data centre capacity (all providers)	There is no national facility count with an established counting rule; the state's last capacity measurement is 98 MW for 2020, and one 1.5 MW facility opened in 2025. The widely repeated count of twenty-three, said to put the country ahead of South Africa, is a September 2023 tally of facilities certified by one institute, not a current census; other published counts use unstated rules and are not commensurable with it or with each other (monograph, comparison). The economic and social council's national series ends at 98 MW installed in 2020, of which 14 MW was outsourced, and runs 52 MW in 2014, 79 MW in 2018 and 88 MW in 2019; no later national figure has been published (series). An operator inaugurated a data centre at Nouaceur in November 2025 at 1.5 MW initial capacity, certified, with more than 1,000 solar panels (facility).	MIXED a new certified facility in service against a national capacity figure six years old and no reliable estate count

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Storage	Local data centre capacity (national providers)	A sovereign compute programme commits MAD 12bn over two phases, with a Dakhla campus, a Rabat sovereign centre and a supplier memorandum behind it. The ministry's April 2026 figures are MAD 12bn over two phases, MAD 5bn for 16 MW at Nouaceur and MAD 7bn for a further 20 MW in the north, giving 36 MW cumulative and 125 direct jobs by end-2027 (platform). A 2025 consortium release had put phase one at over 40 MW, so phase-one capacity has been reduced (release). A green data-centre campus at Dakhla was agreed in November 2025, with one part for sovereign needs and one open to private investment, and feasibility studies launched in April 2026 (campus). A sovereign data centre at Rabat, announced in October 2025 on a single trade-press account, is named in the ministry's July 2026 communique as a project a supplier cooperation will feed, still with no cost, site or date (communique, memorandum).	ADVANCED
Data Storage	Off-site backup capacity	Two institutions tendered recovery platforms in 2026: 108TB scalable past 10PB and a MAD 5m tier three site. The pension fund tendered an anti-ransomware backup platform with 108TB of immediate capacity scalable beyond 10PB in May 2026, and the finance ministry tendered a MAD 5m tier three disaster-recovery platform sited more than 100km from the capital in June. Both are procurements rather than facilities in service, and both are institution-specific: no whole-of-government recovery arrangement appears in the base.	ADVANCED
Energy	Sufficient energy and water for data centres	Up to 500 MW is contracted for the compute programme, against 36 MW of cumulative capacity planned by the end of 2027. A strategic agreement for up to 500 MW was announced in June 2025 and the ministry's April 2026 communique restates no power-supply figure (agreement, communique). The 500 MW is contracted power supply and not installed compute, which is the distinction the press accounts collapse (platform). No water assessment for any site is held, and no national statement connects data-centre demand to generation capacity.	NO CHANGE the contracted power figure is unchanged and the ministry's own restatement omits it
Energy	Grid reliability	The regulator approved the grid's 2026-2030 renewable hosting capacity in January 2026. Reliability is measured against indicators the regulator approved in 2024 and made binding on the transmission operator to report. Capacity planning followed: the regulator approved and published the national system's renewable hosting capacity for 2026-2030 in January 2026, and a lender approved US\$265m for a 300MW pumped-hydro storage project in July. Storage is what makes a renewable-heavy grid reliable for a data centre.	ADVANCED
Energy	Rural electrification	Rural coverage stands at 99.90 per cent at the end of 2024, effectively complete. The utility records rural electrification at 99.90 per cent by the end of 2024 after 198 further villages were connected, and the development bank's programme index puts 937 villages electrified against 99.91 per cent national rural coverage. The work now is grid quality rather than reach: grid, storage and electrification investment continuing toward full coverage.	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Technical Capacity	Robustness of government hardware and software	The Court of Cassation portal went offline for more than a week in August 2026 with no official explanation, on a bar-association account. The portal lawyers use to track rulings was reported down for over a week on 7 August 2026, as the courts increasingly rely on digital portals for that purpose (outage). The outage and the criticism of the silence around it are a lawyer's account; no court or ministry statement is held, and the base holds no availability, incident or recovery measure for any other government system.	REGRESSED
Technical Capacity	Local capacity to maintain, manage and develop government systems	The security authority opened ten state cybersecurity engineer posts in March 2026; no workforce plan is published. The diagnostic that still frames this is the 2018 review finding government information technology siloed by ministry with thin local capacity to run systems. Against it, recruitment is post by post: a competition for ten state cybersecurity engineer posts opened in March 2026 and closed that April. The authority's own register of regulated providers lists audit and incident-response firms and no qualified cloud provider, so the supplier market it would draw on is itself incomplete.	ADVANCED
Cybersecurity	National cybersecurity readiness	A national cybersecurity strategy to 2030 sets four pillars and sixty actions, above a security directive in force since 2023 and a response centre issuing advisories. The strategy carries four pillars, eleven objectives, twenty-six initiatives and sixty actions, succeeding the country's first strategy of 2012; its workforce commitments carry no numbers, and the fiftieth-place ranking claimed for it is from a 2020 index edition (strategy, naming). The base had carried a 2023-dated account of a separate strategy; the full document confirms one instrument rather than two (reconciliation). The national response centre issued a June 2026 advisory naming Moroccan institutions among about 75,000 devices affected in about 200 countries (advisory); the base carries no dated record of the centre's creation (advisory), and the security directive covering state bodies and vital infrastructures has been in force since January 2023 (directive).	ADVANCED

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	National data exchange system	A national water digital twin is designed on a sovereign national data platform hosted domestically, with a first pilot put eighteen to twenty-four months away. The three-layer design rests on a sovereign national data platform hosted in Morocco, fusing sensor networks, satellite observation and data from the basin agencies, the planning commission and engineering consultancies, and is to be hosted in an engineering school's forthcoming scientific tower (design). No cost, budget line or procurement route is given, and the platform it rests on is not otherwise recorded in this base, so the exchange layer appears here as a requirement of one project rather than as a standing national system.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	Use of digital id in other systems	The police-run trusted third-party verification platform holds seventeen framework agreements with more than thirty authorised institutions, unchanged since 2024. The platform reached its second phase with seventeen framework agreements and more than thirty authorised institutions, and a blueprint to extend verification to all government entities was recorded in May 2025 (platform, annual report). No later agreement count, institution count or verification volume is held, so the reach of the country's identity verification into other systems is recorded as at 2024 and 2025.	NO CHANGE
Data Exchange	Interoperability of health systems	The national health-data platform is in service and under a security and performance audit running from July to September 2026. The audit covers infrastructure, application, database and cybersecurity, on a budget of 170,000 dirhams under a donor grant, with no cyberattack or breach cited as the trigger (audit). The budget and scope are the reporting outlet's account of the audit terms and no findings are published, so the base records that the platform exists and is being examined, and nothing about what it connects.	ADVANCED
Data Exchange	Interoperability of education systems	Article 42 of the 2019 framework law mandates an integrated education and research information system; none is recorded built. The framework law of 2019 requires a national integrated education, training and research information system. Seven years on nothing in the base records it in service. The programme that would carry it sets a different kind of target: 55,000 digitally skilled graduates by 2029. The one recorded education data flow is an output rather than an exchange: 2026 examination results delivered by text message with certificates digitised from 18 June.	NO CHANGE
Data Exchange	Interoperability of social protection systems	The identity and targeting project sets five social programmes using the registries by end-2024 and eight by 2028, with no delivery reported. The project approved in December 2024 states those targets, with the two registries having enrolled about half the population at approval (project, record). The end-2024 target date has passed and no count of programmes actually drawing on the registries is held, so the base records the design of the interoperability and no evidence of its use.	NO CHANGE
Digital Identity and CRVS	Robustness of system	The national digital identity application reached 2.5m users and over 7m transactions by September 2025, accelerated after attacks on three state bodies. Adoption was fast-tracked after cyberattacks on the social security fund, the justice ministry and the land registry (acceleration). Usage stood at 2.5m users and more than 7m transactions since April 2022, and by February 2026 the same identity authenticates the national digital wallet (partnership). It is vendor-built on an existing identity platform, and no availability, failure or fraud measure is published for it.	ADVANCED
Digital Identity and CRVS	Registration of entire population	4.6m electronic identity cards were issued in 2024, including 219,408 for citizens abroad through seventy-one centres at diplomatic missions. The police directorate's annual report gives 4.6m cards issued during 2024, with 219,408 issued to citizens abroad through 71 centres at diplomatic missions (annual report). No 2025 or 2026 issuance count is held (institutional account), and no coverage share of the adult population is published, so the base holds a flow figure and not a stock one.	NO CHANGE the newest issuance figure is for calendar 2024

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	National maintenance of id and credentials systems	A biometric passport decree approved in July 2026 abolishes temporary passports and removes the address, and identity-card renewal moved online. The decree specifies four languages including Amazigh, an encrypted chip, the address removed from the biodata page and temporary passports abolished, with the current format continuing during a transitional period; the joint body that sets issuance procedures is not yet in place (decree, account). Identity-card renewal moved online in mid-2026 with pre-fill, document upload, residency-certificate tracking and stamp-fee payment, biometric capture remaining in person; no take-up figure is held (renewal, announcement).	ADVANCED
Digital Identity and CRVS	Authentication	Facial recognition is permitted case by case for remote bank account opening and benefit proof of life, both on prior authorisation since 2020. Remote account opening was permitted by a deliberation of April 2020, conditional on a prior undertaking to migrate authentication to a future national trusted-third-party system that is not established as built (banking). Proof of life for benefit recipients was permitted by a deliberation of July 2020 on the same migration condition, agreed with the insurance and social-security supervisor (benefits). No authorisation count, revocation record or migration record is held for either.	NO CHANGE
Digital Identity and CRVS	Digital id from birth	Law 36.21 creates a birth-linked identifier, and its implementing decree operationalised the platform. The 2021 law creates a national digital civil-status register and an identifier attached at birth, and the 2023 implementing decree put the platform into operation. The legacy stock is what remains: the interior ministry gave ten regional governors three weeks in October 2025 to digitise paper civil-status registers, a deadline the minister restated in the same month.	ADVANCED
Digital Identity and CRVS	Interoperability of birth registration and digital id	The birth-linked identifier created by law 36.21 is the join between registration and the identity credential. The law assigns its identifier at birth, which makes the civil register rather than the identity card the root of Moroccan identity. The systems on top are being connected in the same period – the electronic identity card and the national digital wallet tied to it, launched with the protection commission and the security directorate in February 2026 – and the base does not yet record a live link between the register and either.	ADVANCED
Digital Identity and CRVS	Use by other systems	The national digital wallet binds five state bodies on a card-authenticated core, on eight partnership conventions signed in February 2026. Eight conventions were signed in Rabat in February 2026 and two vendors engaged on architecture, on a stated six-month build (conventions, architecture). The bodies bound are the social security fund, the road safety agency, the land registry, transport, and youth and culture. No launch date, service count or user figure is held, so the base records which systems have agreed to take the identity and not one that has.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	Governance role of central bank	The central bank issued its first standalone annual financial-inclusion report in April 2026, separate from the strategy implementation series it used to sit inside. The report is explicitly separate from the national inclusion strategy's implementation series, which makes measurement a standing annual duty of the bank rather than a by-product of a programme (report). It names usage rather than access as what now limits inclusion, which is a judgement about the market and not only a count of it. No supervisory decision, licensing action or payment-system rule of the bank is separately held in this base.	ADVANCED
Digital Payments and Fintech	G2P functionality	The registries served 5 million eligible households on a June 2026 account, against about half the population enrolled at the end of 2024. About half the population was enrolled when the second identity and targeting project was approved in December 2024 (project). A June 2026 account puts 22 million of 39 million registered and 5 million eligible households served (account). It is a press figure rather than a programme report, and no payment volume or transfer value through the registries is held.	ADVANCED on a press figure
Digital Payments and Fintech	Revenue collection	The fund attributes a tax take of 24.6 per cent of output in 2025 to the full digitalisation of collection. Customs went first: the administration digitised revenue collection and banned cash for commercial clearance from 2019. The fund's 2026 consultation puts the result at a tax take of 24.6 per cent of national output in 2025, attributed to full digitalisation of collection — the clearest fiscal return on a digital system the base holds for any unit. The tax directorate's own procedure page shows two online routes to a tax identifier.	ADVANCED
Digital Payments and Fintech	B2B and B2G functionality	The bill settlement rail opened to fintechs and invoicing software vendors by interface in February 2026. The platform carried 218m transactions in 2024 and offered a plug-and-play collection add-on requiring no interface work, which is the low end of the market. In February 2026 the operator opened the rail to fintechs and invoicing software vendors through an interface, on a cumulative 240m transactions and MAD 220bn since 2013. On the public side, suppliers to state enterprises file invoices and track payment delays electronically.	ADVANCED
Digital Payments and Fintech	P2P, P2G and P2B functionality	A merchant acquisition fund grant of about US\$505,704 was committed for 2026 to 2028 through a continental digital financial inclusion facility. The activity was reported at pipeline stage in February 2026, committing XDR 370,023.73, about US\$505,704 at the provisional annual average rate, over 2026 to 2028 (activity). It responds to challenges the activity attributes to the central bank, and no disbursement transaction is reported. No merchant acceptance count or point-of-sale estate figure is held for the country.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	Population uptake	Wallets grew from 6.3m to 13.7m between 2021 and 2024 and account-holding from 53 to 58 per cent, on the central bank's own series. Access points per 10,000 adults rose from about ten in 2021 to about fifteen in 2024, account-holding from 53 to 58 per cent, and wallets from 6.3m to 13.7m (report); formal savings stood at 33 per cent and formal credit at 12 per cent of adults at the end of 2024 (report). The earlier strategy series runs wallets 2.44m in 2020, 6.3m in 2021, 7.7m in 2022 and 10.4m in 2023, with savings-account penetration reaching 38 per cent against a 20 per cent target (strategy); microcredit stood at MAD 8.4bn in 2022 with active clients down 4.9 per cent to 795,000 (strategy, earlier report).	ADVANCED
Digital Payments and Fintech	Cross-border functionality	The central bank acceded to the continental settlement system on 7 July 2025 as its seventeenth member country. Accession puts Morocco on the continental rail, and a global payment network launched real-time payouts in local currency two months later against a remittance market of US\$11.5bn in 2023. Exchange control remains the binding rule, and it eased: the 2026 general instruction raised the electronic commerce allowance for accredited start-ups to MAD 2m and the individual ceiling to MAD 20,000.	ADVANCED
Digital Payments and Fintech	Consumer protection	The card interchange cap was cut to 0.50 per cent from 1 October 2026. Protection here is competition remedy rather than complaint procedure. The competition authority extended the card processor's acquiring divestiture to January and April 2026, and the central bank and the authority together cut the interchange cap to 0.50 per cent with effect from 1 October 2026. Both act on merchant cost rather than on cardholder redress, and no payment complaints route appears in the base.	ADVANCED
Registries	Population register	Law 72-18 creates the national population register and the agency to run it; the agency has no establishment date, budget or operating record. The statute creates the population register, the unified social register and a national register agency, with article 45 deferring force to implementing texts (statute). The agency was named in December 2024 as a component of the identity and targeting project to be operationalised, and nothing since records it established (agency). So the register operates and the body the law puts in charge of it does not yet exist.	ADVANCED
Registries	Civil register	The digital register created by law 36.21 is operational; ten governors were given three weeks to digitise paper stock. The law creates the national digital civil-status register and the birth-linked identifier, and the implementing decree of July 2023 put the platform into operation. Catching up on paper is the live task: ten regional governors were given three weeks in October 2025, and a further bill adopted unanimously in December 2025 lets the civil-status commission sit without its president to clear the name-change backlog. The municipal programme records the registry system live in 59 of 97 municipalities.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	Address register	From 9 December 2025 the identity card address is the sole legal domicile for judicial notices. Addressing is a communal competence under a 2017 decree and organic law 113-14, which sets the system but not its legal weight. That changed: from 9 December 2025 the address on the national identity card became the sole legal domicile for judicial notices, ending the proxy arrangement that preceded it. An address on a credential now carries legal consequence, which is a stronger position than a register alone.	ADVANCED
Registries	Business register	109,644 enterprises on the register in 2025, up 14.6 per cent, with 42,905 new registrations to May 2026. The register was founded by the 1996 commercial code and given electronic filing by law 88-17. Its throughput is published and rising: 109,644 enterprises in 2025, up 14.6 per cent, with the country climbing to 57th in the global innovation index, and 42,905 new registrations in the first five months of 2026 with legal persons rising to 75 per cent of the total.	ADVANCED
Registries	Social protection register	The population and unified social registries hold 22 million of 39 million on a June 2026 account, built on an open-source identity platform adopted in 2018. Enrolment stood at about half the population when the second identity and targeting project was approved in December 2024 (approval). A June 2026 account gives 22 million of 39 million registered, on a platform the country adopted first, in 2018 (account). The figure reaches the base through the press rather than a programme report, and no error, exclusion or appeal measure for the registries is held.	ADVANCED on a press figure
Registries	Electoral register	Online registration took two of every three new entries in the 2026 revision, and an organic law institutionalises internet-based enrolment. The interior minister's account of the annual revision records new registrations running two to one in favour of the online channel over in-person enrolment, on a roll of about 16.5m voters with about 1.4m entries removed (revision). Organic law 55.25 institutionalises internet-based electoral-roll registration for residents and expatriates and bars artificial-intelligence tools and social platforms from publishing referendum poll results; it was adopted in committee across four sessions in November 2025 and companion law 54.25 was constitutionally cleared in December (committee report, decision). Filing became electronic for the September poll: the interior ministry made the elections portal the compulsory route for candidacy declarations to the 23 September 2026 legislative elections, closing it at noon on 8 September (communiqué). No filing count or fallback for candidates without access is stated.	ADVANCED
Registries	Tax register	The tax directorate publishes two online routes to a tax identifier, against a 24.6 per cent tax take. The directorate's live procedure page shows two online routes to obtaining a Moroccan tax identifier, which is registration as a service rather than a counter visit. What the register produces is measured: the fund attributes a tax take of 24.6 per cent of output in 2025 to the full digitalisation of collection. The directorate is also piloting artificial-intelligence property valuation in two cities, which uses the register rather than extending it.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	Land register	The interior ministry began a nationwide screening of collective land community rolls in August 2026, on a single methodology for the first time. Circulars went to community delegates through local authority officials from 22 August 2026, beginning in two regions and open to extension nationwide (screening). Each listed member is to be verified for actual affiliation, legal majority and residence under law 62.17 and its implementing decree, applying one methodology so that criteria stop varying from one community to another. No count of communities, members or corrections is published.	ADVANCED
Sectoral management information systems	Health	A digital health bill creating a shared medical record has been adopted and is publicly opposed by doctors over its penal chapter. The fifty-article bill sets implementing decrees due within twelve months of publication and provider connection within twenty-four months of the technical decree, and its text is not published (bill). Its penal chapter runs from six to twelve months and MAD 50,000 to 200,000 under one article to MAD 50,000 to 300,000 for failure to feed or interconnect the record under another (penal chapter). A doctors' and clinics' collective opposes it, citing leaks at the social security fund, and doctors protested in August 2026 (opposition, protest). With the text unpublished, neither the objection nor the answer to it can be checked against what the law says.	ADVANCED contested
Sectoral management information systems	Education	The integrated education information system mandated in 2019 is not recorded built. Article 42 of the 2019 framework law requires a national integrated education, training and research information system, and nothing in the base records it operating. The sector's digital output is examination administration rather than management: 262,442 candidates passed the 2026 school-leaving examination with results by text message and certificates digitised from 18 June.	NO CHANGE
Sectoral management information systems	Social protection	22.5m enrolled in the population registry and 5.3m families in the unified social registry, with coverage tripling to 24.3m since 2021. The government's own account of September 2025 puts the population registry at 22.5m enrolled and the unified social registry at 5.3m families, with medical coverage tripling to 24.3m people since 2021. Two qualifications follow. The audit court urged in February 2026 that the population registry agency be activated, so the body governing the register is not yet standing; and the delivery agency opened its first territorial office in the same month, moving beyond a purely digital channel.	ADVANCED
Sectoral management information systems	Justice	The ministry launched a platform publishing in-absentia case data in March 2026 and joined the information portal that month. Court digitisation was appraised in 2012, covering electronic filing and case management. What the window adds is publication rather than process: a platform publishing in-absentia defendants' case data, searchable on the courts portal, and the ministry signing accession to the national right-to-information portal on 31 March 2026.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	Tax	The tax directorate began matching declared income against records held by other administrations in August 2026, opening audit files on an initial 87 taxpayers. Regional and national control services compared declarations of total income against records of activities, property, transactions and investments registered in taxpayers' names and held by other administrations and institutions (matching). Audit files were opened on an initial 87 liberal-profession taxpayers, and the checks extend beyond professional income to agricultural and real-estate earnings, with corrections to the tax base expected. The administrations supplying the matched data are not named, so the exchange is visible in its effect and not in its plumbing.	ADVANCED
Sectoral management information systems	Customs	The only record of the single-window trade platform is a 2016 reference survey putting 18,000 importers and exporters on it. The platform carried 18,000 importers and exporters in 2016 and no figure or status has been published since (survey). Ten years is a long time for a customs platform to go unmeasured in a base otherwise rich in regulator and ministry series, so the gap here is one of collection rather than of activity.	NO CHANGE
Sectoral management information systems	Land	436,000 land titles registered in 2025 across 1.05m hectares, up 17 per cent. Electronic case management for land registration is governed by decree 2-18-181, which is the instrument behind the throughput. The agency's 2025 board recorded DH 10.9bn of turnover and 430,000 titles issued, up 15 per cent, and its accounts put the final figure at 436,000 titles across 1.05m hectares with DH 7.5bn returned to the state and further cybersecurity investment.	ADVANCED
Other GovTech and e-Gov	e-government services	600 services are online, 22 certificates were abolished under the simplification law, and the procedures portal carries over 2,500 transcribed procedures. The official e-visa portal failed from 20 August 2026, freezing after the travel-conditions step so applicants could not reach the personal-details stage (report). No restoration date and no official acknowledgement is in the base. Law 55.19 has been in force since September 2020 and created the procedures portal by its article 26: only procedures published there are legally recognised and enforceable on citizen and official alike, certified copies and legalised signatures are dropped for most procedures, and no administration may demand more than one copy of a file (law). The ministry reports a 45 per cent reduction in documents demanded of users where its simplification method has been applied, on perimeters it does not name (method). An interior ministry circular abolished 22 certificates in 2026 and replaced them with sworn declarations (circular). 2026-09-04 - the administrative rule that would matter most for digital services was proposed from outside government: a party manifesto proposes that administrative silence count as approval, that prior authorisations be reduced, and that artificial intelligence be used in the governance of public policy. It is an election proposal, binding nobody unless the party forms a government, and no bill, scope or timetable exists.	REGRESSED on the availability of a service the state runs

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	ICT infrastructure for local government	The permit platform is live in all municipalities covering 16.9m people. The 2021 strategy named four platforms for local government — permits, complaints, transparency and certificates — as the programme. The implementation report of March 2026 records the permit platform live in every municipality covering 16.9m people, and the civil registry system in 59 of 97. Regions are now building their own back offices: one tendered a MAD 35m integrated records system for human resources, budget and archives in July 2026.	ADVANCED
Digitalisation of sub-national government	Digitalisation of local government records	The civil registry system is live in 59 of 97 municipalities; a region tendered a MAD 35m records system. Municipal records are the slower half of the local programme: 59 of 97 municipalities on the civil registry system against the permit platform's full coverage. The paper stock behind them is what the interior ministry is chasing, having given ten regional governors three weeks in October 2025 to digitise civil-status registers. One region has moved to its own back office, tendering a MAD 35m system for human resources, budget and archives with bids due in September 2026.	ADVANCED
Rural digital data capture	Digitalisation of rural health clinics	1,400 primary health facilities were rehabilitated with the digital information system generalised across them. The health framework law of 2022 creates a national integrated health information system and a shared patient record, which is the architecture the facilities connect to. The estate was rebuilt to receive it: 1,400 primary health facilities rehabilitated at MAD 6.43bn with the digital information system generalised. Diagnostic tooling followed into two rural clinics: artificial-intelligence ultrasound, with breast-cancer screening deployed in the capital.	ADVANCED
Rural digital data capture	Digitalisation of rural primary schools	A consortium is extending connected classrooms to 40 more schools against a 30,000-pupil target for 2026. The national programme has covered rural schools since its inception: the regulator's initiative brings ICT infrastructure, training and resources to every school including rural ones, with 87 per cent of staff trained and coding pilots from 2016. Operator-led work is extending it: a consortium expanding connected classrooms to 40 further schools against a 30,000-pupil target for 2026, with a national call for volunteers.	ADVANCED
Rural digital data capture	Digitalisation of rural registry offices	80 mobile identity enrolment units served more than 130,000 citizens in 2024, and registry extension to remote areas has no delivery figure. The mobile units are the base's only Morocco-specific rural digital-delivery instrument: 80 units serving more than 130,000 citizens in 2024, with no later figure held (units). Extension of the registries to rural and remote areas via digital and remote applications was a component of the December 2024 project, with at least five programmes targeted by end-2024 and eight by 2028; that target date has passed with no delivery or coverage figure held (extension).	NO CHANGE both figures are from 2024 and the stated extension target has passed

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	Digitalisation of rural police stations	No station-level system is described; police digital provision is online services and reporting portals rather than station records. Nothing in the base records digital case records or connectivity at Moroccan police stations outside the cities. What the ledger carries is citizen-facing: police online services and reporting portals. The rural service presence that has moved is registration rather than policing — mobile identity enrolment units and registry extension to rural and remote areas, both already on the ledger.	NO CHANGE

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	Use of AI in government administration	The country rose fourteen places to 87th on a government artificial-intelligence readiness index, and signed a cooperation agreement on artificial-intelligence tools for corruption-risk prevention. The 2025 index edition puts the country 87th globally and eighth in its region, up fourteen places, attributed in the account to the national roadmap and a regional data-for-sustainable-development hub developed with UNDP; the index is not named in the record held and the starting position is derived from the reported change (index). A cooperation agreement with the anti-corruption authority was signed in May 2026, aiming at transparency through advanced information systems and artificial-intelligence tools for corruption-risk prevention (agreement). No deployed administrative system using the technology is separately recorded.	ADVANCED
AI	Use of AI in sectoral management information systems	The tax directorate is piloting artificial-intelligence property valuation in two cities, replacing auditor discretion. Three deployments are on the record and each sits inside an existing system rather than beside it. The tax directorate is piloting artificial-intelligence property valuation with a private partner in Rabat and Casablanca, replacing auditor discretion; the health ministry has deployed artificial-intelligence ultrasound in two rural clinics and breast-cancer screening in the capital. The governing arrangement is being built alongside: a ministry and protection commission pact for a sovereign Moroccan-language model platform for citizens and administrations, and the minister's presentation of the government artificial-intelligence project and a research institute to Parliament in June 2026.	ADVANCED
AI	Development of national / regional AI systems	Four artificial-intelligence institutes were established by gazette in August 2026, after a founding institute and four regional or thematic agreements. Four public-interest institutes were established by publication in the official gazette, covering research and sovereign systems, education, industrial automation and smart cities, with no budget, staffing or opening date stated (establishment). A founding institute launched in January 2026, and four regional or thematic institutes had been constituted by protocol or founding agreement between April 2025 and March 2026 (founding, industry institute). The regional protocols were signed nine months before the founding institute, and no statute, legal form, campus, governance structure or intake was published for any of them until the gazette (Dakhla).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	Control of AI abuse	A national responsible-artificial-intelligence platform was agreed between the ministry and the data-protection commission in September 2025, with nothing built eleven months later. The agreement commits the two bodies to build national platforms on large language models incorporating Moroccan language, culture, legal framework and digital identity (agreement). No platform, budget or delivery date is on record eleven months after signature, so the country's principal instrument for governing the technology in use is an undertaking between two institutions rather than a working control.	ADVANCED
ICT Industry	National capacity in DT-related production	Digital offshoring stood at 148,500 employed and MAD 26.2bn of exports at end-2024, with three agreements targeting 270,000 jobs by 2030. The end-2024 outturn is 148,500 employed and MAD 26.2bn of exports, and no newer figure has been published (outturn); no official statistical release on the sector is held at all (outturn). Three agreements signed in Rabat in January 2026 cover a training incentive, territorial attractiveness and specialised offshoring hubs, on a stated 2030 target of 270,000 jobs and nearly MAD 40bn in exports (agreements); the texts are not held (agreements). A vendor inaugurated a regional research and development office at Agadir in June 2026, with no headcount or investment figure published for it, and a Casablanca centre announced in 2025 with 1,000 jobs claimed has no outturn on file (office, announcement).	MIXED a large offshoring base whose last published outturn is for 2024, against new agreements targeting 2030
Innovation ecosystem	Technology hubs	A fintech centre operates with no published figures, and an artificial-intelligence start-up programme with a technology park was announced in April 2026. The fintech centre was named by the minister at a payments industry event in June 2025, with no participant, funding or output figure held then or since; a start-up support programme is named alongside it, also without figures (centre). The start-up programme announced at an April 2026 exhibition offers cloud, connectivity, cybersecurity and business use cases to artificial-intelligence start-ups, with no cohort, intake or budget published and nothing on file since (programme).	ADVANCED
Innovation ecosystem	Tech startup ecosystem	The development agency's database lists 1,028 start-ups on a January 2025 release, and a govtech challenge opened a public sourcing channel in July 2026. The 2024 file released on the national open-data portal carries 1,028 entries, the union of four listing exercises, with no funding amounts, no definition of a start-up and unnormalised city and sector fields, so the number is a count of rows (database). A GovTech Innovation Challenge was launched in Rabat in July 2026 as a sourcing channel for public-audit and public financial management tools, with the general finance inspectorate and the court of audit as institutional users and no budget or timetable announced (challenge).	NO CHANGE the start-up count has not been republished since January 2025

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	Digital literacy (civil service)	An executive cybersecurity programme for African officials ran in Rabat in June 2026, and a skills memorandum covers acculturation across administrations. The five-day programme for senior officials of African member states was organised by the continental network of cybersecurity authorities and hosted by the national information systems security directorate, with no participant count or budget stated (programme). A memorandum signed in Rabat in July 2026 covers skills-building and acculturation across administrations, universities and research centres, support to institute-backed start-ups, and public-service use cases, with no sum attached (memorandum). Neither carries a count of officials trained.	ADVANCED
Literacy	Digital literacy (general population)	The national literacy strategy to 2035 names a digital element among its strategic choices, and citizen-level digital literacy remains an absence in this base. The strategy runs from 2023 to 2035 and is delivered through a roadmap covering 2023 to 2027 (strategy). Its eighth strategic choice names a digital element that is not established in the French text held, and no programme, participant count or digital-skills measurement for the general population is held elsewhere in the base.	NO CHANGE
Training and skills	DT-related training in secondary education	A renewed vendor partnership certified 261 teachers in artificial intelligence and programming during 2025. The base rate is the national programme: ICT infrastructure, training and resources to every school, with 87 per cent of staff trained and coding pilots running since 2016. On top of it, a partnership renewed in February 2026 certified 261 teachers in artificial intelligence and programming during 2025, and second-year robotics workshops reached 120 students at one site with ministry-supplied equipment.	ADVANCED
Training and skills	DT-related university facilities and qualifications	Enrolment in public-university digital streams doubled to 21,125 in 2023-24, alongside 183 newly accredited digital degree programmes. The ministry's digital talent brochure gives 21,125 enrolled in 2023-24, up from 10,712 the year before, with 183 newly accredited digital degree programmes and 1,000 people trained through a placement programme by the end of August 2024 (brochure). The figures are ministry-reported and no later enrolment count has been published, so the base holds one year-on-year doubling and nothing after it.	ADVANCED on a figure that has not been republished since the 2023-24 academic year
Training and skills	Graduates entering DT ecosystem	The first paid work-study data and artificial intelligence master's opened with 30 students across four corporate hosts. The target is set: 55,000 digitally skilled graduates by 2029 under the higher education programme. The route being built toward it runs through industry: the country's first paid work-study data and artificial intelligence master's opened in October 2025 with 30 students and four corporate hosts. No series counts graduates entering digital employment, so the target has no published progress measure against it.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Research institutions	Think tanks and academic departments contributing to DT policy	A national research and innovation programme commits MAD 1bn across four editions to 2028, with no digital or artificial-intelligence share stated. The programme has been in force since April 2025, funded jointly by the higher-education ministry and an industrial group, with MAD 1bn across four editions between 2025 and 2028 of which MAD 200m is directed at mobilising Moroccan researchers resident abroad (launch). The first edition's three sub-programmes, covering research and development, young researchers and technology transfer, opened for applications between June and October 2025 (call). No award or disbursement record is held, and no digital share of the fund is stated.	ADVANCED

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	Citizen feedback portals	The ombudsman opened 9,958 files in 2025, up more than a quarter, while a police reporting platform has taken 12,614 reports since June 2024. The ombudsman's 2025 report gives 9,958 files opened, 1,653 settlement decisions, a mean 815 days to implement a recommendation and 774 days to close a file ending in one (report); the base holds press accounts of the report rather than the report (report, account). The police reporting platform launched in June 2024 and had taken 12,614 reports by the end of that year, with no later count held (platform).	MIXED a police reporting platform in service against an ombudsman caseload up more than a quarter
Access to services	Citizen participation in policy	An online proxy-voting platform for citizens resident abroad opened in August 2026 for the September legislative elections. The platform runs from 24 August 2026 until noon on 22 September under organic law 27.11: the voter abroad names a proxy registered on a domestic electoral roll, certifies the mandate personally, then downloads and sends the mandate on to the proxy (platform). Polling-station notifications are delivered over the same period, and the ministry stressed that the notification is not required to vote, the national identity card remaining the only accepted proof of identity at the polling station.	ADVANCED
Access to services	Gender equity	An insurance technology and inclusion programme targets about 200,000 new insurance users of whom at least 100,000 are to be women. The activity was reported at pipeline stage in April 2026, committing XDR 371,714.70, about US\$508,015 at the provisional annual average rate, over 2026 to 2028 and executed by the insurance supervisor (activity); total cost is US\$680,000, of which US\$510,000 is grant and US\$170,000 counterpart (activity). It is the only gender target in the base's digital record for the country, and it is a target rather than an outturn: no sex-disaggregated measure of access, use or ownership is held.	ADVANCED
Access to services	Inclusion of persons with disabilities	The census analysis counts 1.73m disabled Moroccans, 67.7 per cent with no schooling. The analysis of the 2024 census published in March 2026 is the country's current disability baseline: 1.73m people, and 67.7 per cent of them with no schooling — an education gap that precedes any question of digital access. Measurement is being deepened with a third national disability survey launched in January 2026, and the one concrete access measure in the window is transport: a permanent 50 per cent rail fare reduction for disability card holders and their guides.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	Inclusion of refugees and IDPs	18,900 refugees registered at the end of 2024; no digital service route for them is described. The refugee agency records 18,900 refugees registered at the end of 2024, and the census counted 148,152 foreign residents, up 76 per cent since 2014. Neither source describes how either population reaches Moroccan digital services. The identity credential that carries service access is a national one, and no equivalent for non-nationals appears in the base.	NO CHANGE
Digital divides	Bridging of digital divides	The only device-cost measure on file is an operator refurbishing 6,000 internet boxes in 2025, saving a reported EUR 1.5m. An operator sustainability report published in July 2026 gives 6,000 boxes refurbished in Morocco during 2025 with EUR 1.5m in savings, company-reported (report). Only the group figure of 164,000 boxes across Africa and the Middle East carries a prior year (group figure), so the Moroccan number has no direction. No urban-rural, income or gender divide measure is held for the country. A private barometer puts platform use at 86 per cent of Moroccans, WhatsApp at 83 and TikTok at 32, with 61 per cent saying they do not trust the news they see there (barometer). Sample and method are not stated.	NO CHANGE a first company-reported figure with no earlier year behind it

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	National strategy for development of statistics	A 51-article statute promulgated on 28 July 2026 remakes the planning commission as an autonomous good-governance body. The reform was announced before it was legislated: the commission's head set out a peer-reviewed overhaul of official statistics, a 2026 employment survey reform and administrative data agreements in October 2025. The statute followed, adopted unanimously by the second chamber in July 2026 and promulgated on 28 July, splitting the statistical and evaluation functions across 51 articles, alongside the law creating a national statistical information council.	ADVANCED
National statistics	Censuses and surveys	A redesigned labour force survey ran for the first quarter of 2026 with the sample raised by half. The census fixed the legal population at 36.83m at 1 September 2024, which is the frame every survey is drawn against. The survey programme was then rebuilt: a redesigned labour force survey aligned to international methodology for the first quarter of 2026 with the sample up 50 per cent, a third time-use survey covering more than 14,000 households with field collection from 20 April 2026, and a third disability survey launched in January.	ADVANCED
National statistics	Statistics from administrative data	The commission announced administrative data agreements alongside its statistical overhaul in October 2025. The statistics directorate has long been charged with processing administrative and civil-registration statistics; what it lacked was the agreements to get at the sources. Those were announced in October 2025 alongside a peer-reviewed overhaul and the 2026 employment survey reform. The national statistical information council created in July 2026 is the body that would govern such flows, and no published series yet rests on them.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Open data	Use of open data	The national open-data portal operates with a documented publication procedure, and its published datasets include a 1,028-entry start-up database. The portal has run with a documented publication procedure since April 2021 and its governance was documented in August 2026, with a steering committee of ten bodies coordinated by the development agency (governance, manual). Its published datasets include a start-up database of 1,028 entries released in January 2025 (dataset). The portal's own dataset count, publication statistics and open-data action plan are not held, so the base can describe how publication is governed and not how much is published.	ADVANCED
Use of satellite data	Agricultural use of satellite data	Two national earth-observation satellites launched in 2017 and 2018 support applications named in water, land use, agriculture and disaster management. The country's own statement to the United Nations committee on the peaceful uses of outer space names the two satellites, operated by the royal remote sensing centre, and the application areas they serve (statement). No product, user, coverage or accuracy figure is published for the agricultural use, so the base records a capability and not its application to a crop, a season or a decision.	ADVANCED
Use of satellite data	Meteorological use of satellite data	The meteorological directorate hosted a regional satellite data processing workshop with the European satellite organisation in June 2026. The service names weather satellites as essential to its 24-hour observation network alongside radar and ground stations, so reception and use are long established. What the window adds is a change of role: the directorate and the European satellite organisation ran a Casablanca workshop on satellite data processing for operational meteorology across Africa, which puts Morocco in the training seat rather than the receiving one.	ADVANCED

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	USA / hyperscaler MoUs, engagements and commitments	A vendor opened a regional research office in June 2026, while its two announced cloud regions have no record of entering service, under a science and technology framework. Two cloud regions were announced in May 2024 at about US\$140m over five years, and no held source records either entering service (regions); what the base establishes is the absence of a launch record, not that the regions failed to open (regions). The same vendor's regional research and development office was inaugurated at Agadir by the head of government in June 2026 (office). A bilateral science and technology agreement is in force under a 2023 protocol; its signed pages carry no text layer, so its operative terms and term of years are not established, and it is a science framework rather than a digital instrument (protocol).	MIXED a research office opened while two announced cloud regions have no launch record

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
China activities	Chinese MoUs, engagements and commitments	The only Chinese engagement on file is a vendor dual-band radio deployment on rail and motorway corridors, in commercial service in 2026. An operator and a Chinese vendor put the first commercial deployment of a 1.8 GHz and 2.1 GHz configuration into service on rail and motorway corridors, claiming a 13 dB coverage gain, 83 per cent higher average downlink throughput and 3.2 times the active users with no additional sites built (deployment, partnership). Every performance figure is the operator's and the vendor's own and is unverified. No Chinese state instrument, loan or technology cooperation framework for the country is held.	ADVANCED
EU activities	EU MoUs, engagements and commitments	EUR20m of the 2026 EU action programme was reserved to the digital partnership (programme). The European Commission reserved EUR20m of a maximum EUR148m 2026 action programme to the digital partnership support programme (programme). The Commission's list of recognised third countries, current to August 2026, names sixteen jurisdictions plus one international organisation, none of them in Africa; an intention to seek adequacy was reported during 2025 (list, roundup). Convention 108 was ratified during 2019, the exact date not held (accession). Neither adequacy source is tagged to the country, and no Morocco-tagged governance source in the base mentions the European Union at all, which is itself the finding.	ADVANCED
Gulf/UAE activities	Gulf MoUs, engagements and commitments	Twelve investment memoranda span rail, energy, ports and data centres; no data centre has since been recorded proceeding under them. The exchange ceremony of December 2023 put twelve memoranda on the record covering rail, energy, ports and data centres. Nothing in the base since names a data centre proceeding under any of them. Where a large facility has moved it has moved on other paper: the convention signed in April 2026 launching studies for a 500MW green data-centre campus at Dakhla, between ministries, the region and state funds.	NO CHANGE
India activities	India MoUs, engagements and commitments	The country is turning to India to develop artificial intelligence adapted to its national languages, on an August 2026 report. The turn to India was reported in August 2026 as a stated direction rather than an agreement (report). No instrument, partner institution, language list, budget or timetable is published, so the base records an intention and nothing that would let a later run check whether it was acted on.	ADVANCED

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Morocco-China technology cooperation framework	A signed state-to-state instrument; the base holds six sources on this subject and every one is a vendor relationship, with no government-level framework on file	2026-08-06
Morocco-United States bilateral digital or artificial-intelligence agreement	A signed bilateral instrument on digital or artificial-intelligence cooperation; the base now holds the 2023 protocol extending the two states' 2006 science and technology agreement, which is not one, and otherwise a commercial guide, ambassadorial attendance at two openings and an unresolved satellite licensing position	2026-08-06
Founding decree or statute for the Al-Jazari institutes	The founding agreements or the constituting decree; the base now holds the ministry's own accounts of four regional or thematic signings from 2025-04-14 and of the founding institute launched 2026-01-12, and no statute, legal form, governance structure, budget, campus or intake for any of them	2026-08-06

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Official start-up investment statistics	A publication by the digital development agency, the investment agency or the ministry giving funded-company counts and amounts; the agency's own 1,028-entry start-up database (2025-01-03) carries no funding amounts, and investment totals remain two third-party trackers whose 2025 Morocco figures disagree	2026-08-06
Start-up legal status	A bill, decree or published legal definition of start-up status; the base carries a 3,000-start-up target and several accelerator programmes, and no instrument conferring status	2026-08-06
Accession to the modernised Council of Europe data-protection convention	The ratification or accession instrument for the modernising protocol, or a statement that Morocco has not acceded to it; accession to Convention 108 itself is now established from the 2012 committee opinion and the regulator's recital of a 2019 ratification, and nothing on file addresses the modernised text	2026-08-06
Ombudsman's 2025 annual report	The report's own text; it was presented in Rabat on 2026-07-23 and is known only through two press accounts, and the wiki records that the institution's own site is unreachable	2026-08-06
Promulgated organic law amending the electoral code	The gazette publication of the enacted electoral organic law; the base holds the bill as tabled with its provisions, and no held source carries the adoption or constitutional-review dates, so every citation must say it rests on the draft	2026-08-06
Digital Morocco 2030 progress report	An official progress or monitoring publication against the strategy's stated targets; the base carries the targets and no delivery figure against any of them at any date	2026-08-06
Data-protection authorisation for the facial-recognition patrols	A data-protection commission decision, authorisation or opinion covering live facial recognition in the patrol vehicles; the base now holds the commission's 2019-2020 facial-recognition instruments and its 2025-03-21 decision to open hearings towards a video-surveillance deliberation, none of which reaches the patrols, and law 09-08 article 2(4) excludes processing in the interest of national defence and state security	2026-08-06
Data-protection commission annual report	Any annual or activity report of the national data-protection commission; the base now holds four of its deliberations and two communiqués directly, and still no enforcement statistics, registration counts or sanction record for any year	2026-08-06
Digital ministry appropriation in the 2026 finance law	The 2026 finance law or the ministry's budget annexes for 2025 and 2026; the ministry's own budget-by-chapter series is now held to 2024 and stops there, so no appropriation is established for either year the report covers	2026-08-06
National digital inclusion index or indicator framework	A ministry or planning-commission publication defining inclusion indicators and targets; the base carries the published finding that inclusion objectives are not operationalised and a connectivity baseline from a private tracker, and no Moroccan inclusion index, vulnerability profiling or territorial targeting instrument	2026-08-06
National cybersecurity workforce plan	A government plan or published target for cybersecurity skills; the base holds one vendor study's figures of 6,000 certified professionals against demand above 12,000, and a general target of training 100,000 people by 2030, with no cybersecurity-specific plan, intake target or progress reporting	2026-08-06

ABOUT THIS DOCUMENT
