

PROGRESS REPORT

Open data: progress report, September 2025 – September 2026

Edition of 2026-09-09-2 · compiled by Claude Opus from the documents in the Corpus repository

52 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has **No evidence** on it in its own report.

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

The place reports do not share one window; the period above is the range they span.

Use of open data

COUNTRY	DEVELOPMENTS	PROGRESS
Angola	The census portal publishes indicators by geographic level, with no open-data licence, bulk download or programming interface stated. 2026-07-02 — the statistics office launched a public portal with demographic, social, economic and housing indicators by geographic level, and a mobile application carrying macroeconomic series. It is the only public data publication on this ledger. No open-data licence, bulk download or programming interface is stated, so what exists is a browsable publication rather than a reusable dataset — and no source records anybody reusing it. No open data policy, no national data portal and no dataset inventory appears anywhere for the country. The contrast worth drawing is with the registers: the population, social and electoral databases reported under registries are being consolidated at considerable expense, and parliament rejected the one amendment that would have opened any of them.	ADVANCED a public indicator portal with nothing published about reuse
Benin	The exchange operator publishes its own request volumes, members and services, and budget transparency scores 77 out of 100, fifth globally. 2026-07-11 — a public directory publishes the exchange's request volumes, members, information systems and services, a rare instance of an African exchange publishing its own usage. Nothing of the kind existed before it, and it is the reason this report can state the traffic figures it does. 2026-06-19 — the 2025 open budget survey scores the country 77 out of 100 on transparency, fifth globally and second in sub-Saharan Africa, with 52 on participation and 72 on oversight, from 1 out of 100 in 2012. It is a reference survey, cited and not absorbed. What is absent is a general open data instrument: no policy, no portal, no licence and no dataset inventory appears. Publication here is a practice of two institutions rather than a rule.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Botswana	A tourism statistics dashboard went live in April 2026, the clearest instance of reuse; the open data policy remains unadopted. 2025-10-17 — Part V of the Digital Services Act establishes the open data framework, requiring machine-readable publication and enterprise data inventories. 2026-04-15 — a tourism statistics dashboard was launched with Japanese agency support, to track industry growth. 2026-03-14 — terms of reference were issued for a second phase of hackathons and a forum, tied to the policy's anticipated adoption. No national open data portal exists, and no dataset count or licence is published.	ADVANCED
Burkina Faso	A joint ministerial order of 10 November 2015 founded the Burkina Open Data Initiative; its portal no longer serves a catalogue. The joint ministerial order founding the Burkina Open Data Initiative names ANPTIC as executing agency and sets the objective of releasing non-sensitive public data for re-use. The instrument is now held and the thing it founded is not working: the national portal hostname serves a data-engineering console rather than a public dataset catalogue. No dataset count, release schedule or licensing statement is held, and no access-to-public-information statute has been located beyond a 2015 text in the broadcasting regulator's library.	MIXED the founding instrument is held and the portal it founded no longer publishes datasets
Burundi	The statistics institute publishes an open licence permitting reuse, redistribution and derivative products, subject to attribution. The institute's open data platform carries a worldwide, free, non-exclusive licence to use, copy, modify, translate, publish, adapt, distribute and build derivative and value-added products from the data, for commercial and non-commercial purposes, subject to attribution. It is Burundi's operative open data licence and it is the whole of what the base holds on open data: one institution's platform, with no whole-of-government portal, no publication schedule, no dataset count and no measure of reuse. The page carries no date, so even the licence's age is a proxy from an archived capture.	NO CHANGE a first record of the licence with no earlier position behind it
Cameroon	An indicator platform launched on 17 September 2025, while the open-data policy provided for in the roadmap is still unpublished. 2025-09-17 - the statistics institute launched a platform publishing development-goal indicator data for public access, built in 2024 with configuration work through the first half of 2025. No update cadence, indicator count or usage figure is on file, so whether it is being maintained is unestablished. The policy layer did not move: a national open-data policy is provided for in the artificial-intelligence roadmap with nothing published, and it is not among the ten priority areas tabled to cabinet on 30 July 2026. No licence, catalogue or publication obligation exists behind the one platform that does publish.	MIXED a development-goal indicator platform launched while the national open-data policy stayed unpublished
Cape Verde	A transparency portal completed public consultation in July 2025, and a statistics access protocol was signed with a university. The transparency portal was built and out to public consultation from 27 June to 17 July 2025, discharging the statutory duty to create a publicly accessible electronic platform, its declared scope covering central government, local government and state enterprises in one portal with downloads in six formats and data exchange by interface. No source establishes whether it went live after the consultation closed. It was designed and implemented by the finance ministry's own directorates with donor technical support, naming no vendor. 2026-03 - a cooperation protocol was formalised providing mechanisms for scientific access to statistical data including metadata and anonymised microdata subject to data-protection rules and statistical secrecy, covering research projects, theses, publications and exchange of expertise; no access portal, request procedure or first dataset is named.	ADVANCED
Central African Republic	The statistics institute integrated an open licence on its data portal and relaunched its microdata archive in 2026. 2026-06-10 - the institute confirms it has integrated a new open licence on its open data portal and institutional website, with a national indicator-update workshop planned for the end of June. 2026-05-29 - its microdata archive, built under a development-bank project and running since July 2020, was relaunched with a modernised interface as part of a wider dissemination upgrade. 2026-05-21 - the licensing question was raised at a webinar run by two international bodies on open-data licensing and dissemination practice. No dataset count, download figure or reuse of the published data appears anywhere on this ledger.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Chad	The digital Journal Officiel opens 68 years of legal texts, while microdata may not be redistributed without written consent. The platform launched on 14 May 2026 gives free centralised online access to laws, decrees, regulatory texts and public procurement notices back to 1958, carried by the government's general secretariat with United Nations technical support and European Union funding (platform). The statistics institute's archive bars users from copying or transmitting microdata to anyone without prior written agreement, requires a prescribed source line and two copies of any report produced (policy) — so the material is published and not open. A water geoportal, a mobile data-collection application and finalised hydrogeological maps were presented at an open day on 24 June 2026 (geoportal).	ADVANCED
Comoros	The microdata archive holds fifteen datasets; two large surveys were added inside the window. The statistics institute's national microdata archive is searchable by study and carries documentation and microdata for fifteen datasets at 23 August 2026. Access to individual files requires registration rather than an open licence, and nothing outside the statistical system publishes a dataset at all. 2026-05 - the 2024 household living-conditions survey, 5,487 households fielded from May to November 2024, was catalogued. 2026-05 - the second agricultural census was catalogued, 73,818 holdings enumerated in a census fielded from December 2023 to November 2024 with a sample survey of 11,454, the first update since the 2004 census. Dissemination is real and narrow: one institute, fifteen datasets, no policy behind it.	ADVANCED
Congo	The statistics institute's Open Data Portal has begun loading ministry and agency data alongside its own. The economy, plan and statistics minister signed a partnership convention for the statistics institute on 5 June 2026, at which the institute's director general described the Open Data Portal loading not only its own data and outputs but those of sectoral ministries and other national agencies, with access, download and re-use in several formats. That is an operating state rather than an announced launch, and it is the closest thing the country has to open data. No founding instrument, dataset inventory, licence statement or usage figure for the portal is held.	ADVANCED
Cote d'Ivoire	An open-data initiative dating to 2014 and a fifth open-government action plan carry commitments; nothing published has followed. The national portal is the technical expression of the Prime Minister's open-government action-plan commitments, piloted by the government information and communication centre with the data-protection authority, the open-government chapter, the digital economy ministry and a civic-technology association, on the 2013 statute on access to information of public interest. The fifth action plan, covering 2024 to 2026, carries twelve commitments of which four are digital - publishing laws and decrees through the information-access authority, promoting open data locally through hackathons, digitalising service delivery through a public-service house, and a citizen price-monitoring application. Against that, the access-to-information programme's five components have produced nothing published in a year and a geoportal launched in June 2026 is not yet built. No dataset count, licence or download figure appears on this ledger.	NO CHANGE an initiative and an action plan on paper with no published dataset behind them
Djibouti	126 years of the legal record were digitised and published online, alongside a standing open-data platform. The open data platform is in service with no dataset inventory or update policy held, access arranged through a development bank, and the national summary data page was launched at the central bank on 12 June 2025 and is published with no update record held. 2026-08 - 126 years of the legal record were digitised and published online. The account gives no date for when publication began, so the position at the start of the period cannot be stated. It is the one substantial publication of state information the window records, and it is a legal archive rather than a dataset.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
DR Congo	The statistics institute launched data.gouv.cd on 23 February 2026. The Institut National de la Statistique launched data.gouv.cd, the national open-data platform, on 23 February 2026, publishing datasets across demography, economy, health, education, public finance, agriculture and infrastructure in CSV, XLSX and JSON. It is a platform without a governing instrument: no open-data decree, licensing statement, microdata release policy or access-to-information law is held, and no dataset count or usage figure is on the record. 2026-09-06 - the gap the portal does not cover was named: the national academy of sciences called for a national policy on the management and security of environmental data, setting the absence against an observing network that carried more than 125 synoptic weather stations and 400 hydrometric stations in the 1960s, few of which still work. An academic call, not a government commitment: no draft, sponsoring ministry or timetable exists.	ADVANCED
Egypt	A governorate sustainable-development dashboard covering all 27 governorates went live; no dataset catalogue or licence is held. 2025-07-30 - the planning ministry launched an interactive platform displaying sustainable development indicators for all 27 governorates, built on official data drawn principally from the statistics agency and updated periodically. It scores each governorate on the gap to its own 2030 target, the annual rate of change required to close it and its rank among the 27, on an OECD framework. The governing policy sets open-by-default treatment with timeliness, accessibility, free-of-charge and non-discrimination principles, and entered into force in August 2025. The dashboard is a viewing surface, not a catalogue: no dataset download, API, open licence or indicator count is stated for it, and no national open-data portal exists. The other public output of the window was the sixth economic census results and a new agency website. A policy with a dashboard and no catalogue behind it is the position.	ADVANCED
Equatorial Guinea	Data collection for an extractive-industries transparency report opened in July 2026, the last outstanding measure before an international programme validation. No report has been published (data collection). No national open data portal, policy or dataset inventory exists anywhere in the base, so a single sector report driven by an external validation deadline is the entire open-data record.	ADVANCED
Eswatini	No open data portal exists. The digital readiness assessment records the absence, and the draft data governance policy is about sharing between institutions. The assessment places the country at the systematic stage across all six pillars and records no centralised open-data portal (assessment). The national data policy drafting opened in April 2026 with European Union, member state and German development-agency support (workshop), and the draft policy validated in July turns on institutions reaching each other's records rather than publishing them (validation). Where data is published it is published as documents: the 2025 civil registration report was launched publicly with national figures (commemoration). A report is not a dataset. No published dataset, licence or release obligation is held.	NO CHANGE no portal and a policy in draft that is about sharing rather than publishing
Ethiopia	The statistics service formalised public data access as a standing dissemination function (mandate). The Ethiopian Statistics Service now carries statistical data dissemination and access as a dedicated departmental function, covering its data bank, microdata repositories, web portals, anonymisation, public use files and dashboards (mandate). Ethiopia OpenAgriNet launched in February 2026 as an open-standards, consent-based agricultural data platform (launch). The last authoritative statement on the general-purpose portal is from 2018: data.gov.et launched in March 2016 with 29 datasets posted in open format, three of five planned citizen-facing applications delivered, and the open-data policy guideline still in draft (supervision report). The base holds no later status for data.gov.et and no dataset count for it after 2018, so what moved here are the sectoral platforms rather than the national portal.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Gabon	An external assessment judged the country not to meet minimum fiscal transparency requirements again in its 2026 report. The 2026 report, published on 11 August 2026 for the review period to 31 December 2025, presses governments to publish and regularly update information on state financial obligations including those of major state-owned enterprises; of 139 governments and one entity reviewed, 73 met the requirements and 67 did not, 14 of the latter judged to have made significant progress (assessment). The previous review found only limited information published on debt obligations, excluding state-owned enterprise debt, no timely publication of the executive budget proposal or end-of-year report, and quarterly execution reports judged limited and unreliable. The base holds no open government data portal or policy.	NO CHANGE
Gambia	The Gambia ranked third in sub-Saharan Africa on budget transparency in the 2025 open budget survey (report). The Gambia ranked third in sub-Saharan Africa on budget transparency in the 2025 open budget survey (report). Budget transparency is not the same as open data, and the base holds no dataset count. 2026-09-04 - the ministry's own account of the data-governance programme sets the open-data and cloud work alongside the services platform, against gaps it names in the protection bill and in the infrastructure. It is a presentation rather than a portal, and the strategy's own finding of no registry, no legal framework and no portal is unretracted.	ADVANCED
Ghana	A fisheries information system launched in June 2026 is the only open data platform held, and it is underfunded. It was built by the fisheries ministry with the national multi-stakeholder group, with inadequate funding constraining the wider transparency commitment it sits under, and talks on reviving a fisheries funding mechanism reported as under way and nothing concluded (fisheries system). No open-data policy, portal, licence or dataset inventory exists anywhere in the base; the nearest record is a data-literacy week at the planning commission.	ADVANCED
Guinea	Loi L/2020/0027/AN requires proactive publication of sixteen categories of public information and makes re-use free by default; no portal implements it. The access-to-information law's Article 10 imposes proactive publication, refreshed at least quarterly, of sixteen categories including statistical, economic and social information, budget and public-finance data at central, regional and local level, national accounts, public debt and procurement projects, and Article 11 requires the site to carry the legal framework, request forms and appeal routes. Chapitre 3, Articles 27 to 32, governs re-use: public information may be re-used for other purposes, restrictions only on proportionate general-interest grounds, and re-use free of charge by default with cost-recovery fees only for commercial re-use. The statute is held and no national open-data portal implementing it is. Nothing states how many requests are received, how many are granted, or whether any refusal has been appealed.	NO CHANGE a standing statute the base holds for the first time
Guinea-Bissau	No open data portal or dataset release is recorded; the national summary data page is the only routine publication. The base holds no Guinean open data portal, licence or dataset catalogue. Routine publication is limited to two instruments the ledger already carries: the fund's national summary data page, and the state budget volume published with the 2026 budget. The access to information bill that would create a right of access remains in development.	NO CHANGE
Kenya	The ministry asked that electronic legal deposit and a national digital knowledge repository be written into the library service bill. The requests were made at a Senate committee hearing on 4 August 2026 and also cover digital preservation of public records, artificial-intelligence-supported cataloguing and interoperability with government digital infrastructure; the bill is held only as an unreadable image, so its own provisions cannot be stated (hearing). Against that, the state's other open-data instrument is a proposal to sell rather than publish: a marketplace of more than 1,000 datasets at KSh 396m to build and operate (marketplace).	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Lesotho	A 2021 assessment found no active government open-data programme and no portal, and nothing since records one. The capacity assessment of September 2021 found no government open-data activity (assessment). A civil-society open data initiative launched in 2019, and the country ranked 151st of 187 in the 2020 Open Data Inventory. No government portal, dataset catalogue or publication commitment has appeared in the base in the five years since.	NO CHANGE
Liberia	Public-use microdata is published with download counts, and the extractives board scored Liberia 80 points in July 2026. The statistics office publishes anonymised public-use datasets on its own microdata catalogue – the 2024 agriculture survey, whose record carries download and view counts, and the 2024 women's empowerment and nutrition survey – under stated access conditions resting on the 2004 statistics Act. The only dated external assessment is sector-specific: the extractives validation of 23 July 2026 scores Liberia Very Good at 80 points, with data accessibility and open data cited as a strength. No adopted national open data policy underlies any of it.	ADVANCED
Libya	The government open data platform carries indicators over 91 datasets, joined in 2026 by an information-for-all committee and a trial mineral map. The platform was launched on 27 November 2025 and by February 2026 carried indicators covering 91 datasets (platform, indicators). A National Committee for the Information for All Programme was established under Decision No. 50 of 2026 and met first on 20 July (committee). A trial national digital mineral map was launched on 12 August 2026 on a database of roughly 1,200 ore and mineral indicators with geological maps at 1:250,000 scale, and no access terms, licence or publication date is stated (mineral map).	ADVANCED
Madagascar	The national assembly runs a licensed open-data interface serving five parliamentary datasets, while a general portal carries no datasets or issuing institution. The parliamentary interface serves deputies, legislative texts, sittings, committees and parliamentary groups as structured data under an open licence compatible with attribution reuse, rate-limited to 60 requests a minute; its page counters read 163 deputies, 45 texts and 128 sittings at capture (interface). The general portal is a reachable landing page with six undated category tiles and four unlinked project cards, naming no issuing institution, dataset count or licence, and its footer credits only a private vendor, so it is not established as a government portal (portal).	ADVANCED
Malawi	The electoral commission refused an observer coalition analysable electronic copies of the voter roll, and the same position stands after the elections. The commission held that the elections statute limits inspection to verification of entries at registration centres and regional offices; the request explicitly excluded biometric data, and the commission published the correspondence itself (refusal). Nothing held records a later request, appeal or change of practice, including after the September 2025 elections. It is the base's only recorded test of machine-readable access to a government dataset in the country.	NO CHANGE
Mali	There is no open-data portal and no single access-to-information law, while a government monitoring system publishes completion rates. A 2026 evaluation found no single access-to-information law: the right is split across three statutes, and no open-data portal or policy is held (evaluation). The government action monitoring and evaluation system published its first evaluation, covering the second half of 2025, and is operating and publishing completion rates (system). That first evaluation puts 43.43 per cent of planned activities completed, 109 of 251, with 83 in progress and 59 not started (execution). A state that publishes its own shortfall but has no open-data instrument is doing transparency by exception.	MIXED no open-data portal or single access-to-information law against a government monitoring system publishing its own completion rates
Mauritania	The national open data portal carries 24 downloadable datasets from four public providers, last of four benchmarked countries on every published measure. The portal is run by the statistics agency and carries 24 datasets from four providers, with no membership of the international open-government partnership (strategy). A June 2023 national open-data strategy proposed a new governance framework, a portal redesign and reviving the decree creating a state digital agency as operator; none of that is reported delivered three years later, and the portal is where it was.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Mauritius	A statistics data platform launched on World Statistics Day 2025, nine years after the open data policy. The national open data policy dates from May 2017 (policy). The statistics office launched a data platform with United Nations development agency support in October 2025 (launch). The national data strategy of January 2026 revisits the policy's ground (strategy). No dataset count, download figure or reuse account is held for the platform or under the policy. 2026-09-03 - the central bank put its statistics on a standards-based platform: it launched its statistical data platform on 3 September, built with monetary fund and development bank support on an open data platform with standardised statistical data and metadata dissemination, stated as the first African central bank on that platform's second version. No dataset count, series coverage, licence or machine-readable access statement accompanies the launch.	ADVANCED
Morocco	The national open-data portal operates with a documented publication procedure, and its published datasets include a 1,028-entry start-up database. The portal has run with a documented publication procedure since April 2021 and its governance was documented in August 2026, with a steering committee of ten bodies coordinated by the development agency (governance, manual). Its published datasets include a start-up database of 1,028 entries released in January 2025 (dataset). The portal's own dataset count, publication statistics and open-data action plan are not held, so the base can describe how publication is governed and not how much is published.	ADVANCED
Mozambique	A public infrastructure data portal publishes road, bridge and project data under an open licence and an international contracting standard. The portal is run by the roads fund with foreign development support and was validated as a publisher against the infrastructure contracting standard in 2026 (portal). It is the only government open-data publication in the base carrying an explicit reuse licence, and it covers one sector. No national open data portal, policy or publication mandate is held. Where electoral data is concerned, access rests on a bilateral undertaking rather than publication: the elections commission and a civil-society consortium signed a memorandum in April 2023 giving the consortium a right of access to electoral-process information for the 2023 municipal and 2024 general elections in return for a duty to support the electoral bodies (memorandum). What was released under it is not held, and the European Union observation mission separately records that most of the commission's 2024 decisions were not accessible from its own website (mission).	ADVANCED
Namibia	The statistics agency runs data portals and a microdata catalogue of sixteen studies with stated access terms, while a reporting application and an environmental platform publish no dataset. The agency operates a data portals page and a catalogue holding sixteen Namibian studies from 1992 to 2023, each carrying a stated access term; the source states explicitly that this is agency-run dissemination and not a government-wide open data policy or portal, which the base does not hold for the country (catalogue). An infrastructure reporting application launched nationwide takes public reports of more than thirty kinds of fault onto a mapped national dataset with automatic facial and licence-plate redaction; it is privately built and privately held, with no user count, data-sharing arrangement with any authority, or licence for the dataset stated (application). An environmental agreements monitoring platform launched at N\$12m to centralise environmental data for planning and national reporting, with no public access, dataset list, licence or publication rule stated, so it is a reporting tool rather than open data on the record held (platform).	MIXED an agency microdata catalogue with stated access terms against two new platforms that publish nothing
Niger	A multisectoral government and United Nations data platform is in build with the statistics institute, with no launch date published. It is being built alongside an artificial-intelligence training programme (platform). No dataset, licence, access terms or launch date is published, and no national open-data portal or policy is held for the country, so the platform is an intention recorded inside another programme's account.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Nigeria	A 2018 open data policy is still the operative framework, while the open contracting portal is the one national dataset assessed as in use. The open data policy issued in July 2018 remains the only national instrument expressly titled one, and no revision, review or compliance report under it is held; a national data action plan for 2025 to 2028 was launched above it in December 2025. The data exchange was launched at a stakeholder workshop in August 2025 explicitly framed as enabling anonymised public-data use, and the public portal of the national education management platform is the first opening of a national administrative dataset to the public the base records; no dataset list, licence or update cadence is published for either. The open contracting portal publishes standardised procurement data with dashboards, and the procurement bureau reports about N173bn of savings in the first half of 2025 — the only case in the base where published data is assessed against an outcome.	ADVANCED
Rwanda	No national open-data portal, catalogue or policy is on file, against a data-sharing policy that runs open by default. Nothing is held: no portal, no catalogue, no policy (absence). The data-sharing policy is open by default with a safe-access framework, so the country has adopted the principle for government-to-government sharing and has published nothing that opens data to anyone outside government (policy).	NO CHANGE
Sao Tome and Principe	A civil-society citizen's budget for 2026 reuses the official budget law, summarising how the State plans to raise and spend public resources. The citizen's budget was built from the budget law as gazetted and links to the full official text, and states that it is intended to meet the budget transparency index (citizen's budget). It is a civil-society reuse of official data rather than a government open data portal or an approved open data policy (citizen's budget), and no portal or policy is held. The other published series a reuser could reach are the regulator's sector statistics (statistics) and the central bank's payment series (payments), neither offered as data.	ADVANCED
Senegal	The national data archive publishes per-dataset consultation counts while stating access per dataset as licensed or withheld. The archive is the only Senegalese public-data system publishing per-dataset consultation counts: 4,808,203 views on the 2013 census, 24,422 on the 2024-2025 agricultural survey and 19,910 on the 2023 census, with access stated per dataset as either licensed or withheld. The terms are explicit on one survey: any use requires written authorisation from the agency's director-general, the data may not be copied or transmitted onward without written agreement, a citation string is mandatory and three copies of any report must be sent back. Views are not downloads, and this is authorised re-use rather than open data under an open licence.	NO CHANGE a licensed catalogue with consultation counts rather than an open-licence portal
Seychelles	A fisheries information system gives public access to statistics, licensing and export data — the clearest operating open-data system held. The responsible ministry describes the system as operational and providing public access to fisheries statistics, licensing and export data, showcasing it to a visiting delegation in June 2026 (system). In May 2026 an openly licensed Seychelles energy-system dataset covering demand, cost, efficiency, emissions and resource-availability parameters from 2023 to 2050 was published (dataset). The central bank publishes payment-system series and the statistics bureau its national accounts (accounts). No dataset count, catalogue or download figure is published, and there is no government open-data portal.	ADVANCED
Sierra Leone	Three public-use microdata files were released in the period, ending with version 2 of the 2024 women's empowerment and nutrition survey. The Annual Agricultural Survey 2023 public-use file was released in November 2025 (2023 survey), the Annual Agricultural Survey 2024 microdata in April 2026 (2024 survey) and the second version of the Women's Empowerment and Nutrition Survey 2024 in May 2026 (WEN survey). Three releases in seven months from one producer is the whole of the open data activity in the base. No government open data portal, no licence statement and no dataset inventory outside the statistics catalogue is held, and the two open data policies recorded separately bind one sector and one commission.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Somalia	The statistics platform publishes under a CC-BY 4.0 licence in machine-readable formats; the government portal was carrying eight datasets across ten ministries. The terms of use published in July 2024 set the operative licensing and format conditions for the statistics open-data platform: a CC-BY 4.0 licence, machine-readable formats and a stated regular update cadence (terms). The separate government open-data portal carries no dateline of its own; its vision statement targets 2020 and eight datasets across ten ministries were listed at the time of the probe. What the bureau does publish moves: a business establishment booklet in January 2026 (booklet) and an energy indicators report (report). No publication obligation binds any other body.	NO CHANGE
South Africa	A national broadband map was launched on 31 March 2026 and is recorded as not public, so the gaps it reveals are visible to its holders and not to anyone else. 2026-03-31 — a national broadband map was launched, the first the country has held, and the ledger records it as implemented but not public. That combination is the whole of the finding. A map that identifies where coverage is absent is the input every subsequent decision needs — the connectivity programmes, the spectrum release, the rapid-deployment by-law reported elsewhere in this report — and none of those decisions can be scrutinised against it while it stays closed. The regulator's draft infrastructure database would compel operators to submit geo-referenced passive-infrastructure data twice a year, which would deepen the same holding without changing who can see it. The one open instrument on the ledger is narrower: an open science policy covering publicly funded research output, with no commencement date stated. 2026-09-07 - a costed national roadmap did reach the public: a development bank and planning commission study puts universal household broadband at R108-142bn in 2025 real terms, on a 0.76 square-kilometre hexagonal-grid mapping exercise. A costing, not an appropriation.	ADVANCED a national map built and not published
South Sudan	The first nationally representative household dataset since independence was released in April 2026, alongside a public food security dashboard. The statistics bureau and a United Nations agency released the 2025 Multiple Indicator Cluster Survey publicly with full results and detailed data (survey). The food security information system's public dashboard lets users query state-level phase populations for April to July 2026, turning a major humanitarian assessment into queryable data (dashboard), and the bureau runs an open data portal on public, registered and restricted tiers (portal). Fifteen years to a first national household dataset. Everything open in this base is statistical, and no policy requires any of it.	ADVANCED
Sudan	Land governance data are not open and none has been online since 2023; the last inventory assessment scored Sudan 24, ranking 159th worldwide. The assessment finds land governance data and information are not open, no open data has been available online since the 2023 conflict escalation, and Sudan's last Open Data Inventory assessment, in 2018, scored 24 and ranked 159th worldwide (assessment). No open-government-data portal or policy was located. The access-to-information law of 2015 is the closest instrument, and the commission it requires was never effectively established (law). What data does reach the public reaches it through partners: survey microdata catalogues and humanitarian data platforms rather than a national portal.	NO CHANGE
Tanzania	An external fiscal transparency assessment found the country not meeting the minimum requirements in 2026. It is an external assessment on a foreign government's own criteria, and it is the only recurring transparency measure the base holds for this country (assessment). No national open-data portal, catalogue or policy appears anywhere in this ledger, so a foreign assessment of fiscal transparency is doing the work an open-data indicator would otherwise do.	NO CHANGE
Togo	A national digital observatory went live in November 2025 centralising sector data for citizens, researchers and business. The observatory went live on 13 November 2025, built by the digital transformation ministry with German technical support, as a public platform centralising digital-sector data with an annual report planned. The general portals launched 19 December 2024 — an open data portal and a geoportal for infrastructure data — and are being rebuilt to a second generation with standard metadata modelling. Use is where the base is thinnest: no download, reuse, dataset-count or user figure is published for any of the three, and no adopted licence tells a reuser what they may do with what they take.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Tunisia	A national public data registry is confirmed live and enabling citizen data requests, and an agrifood sector data portal launched in July 2026. The registry's live status is a finding of an independent review mechanism's report published in August 2026, cited for that specific finding rather than absorbed in full; the registry's own launch date is not given (registry). The agrifood portal launched on 23 July 2026 after a full functional test two weeks earlier (portal, launch). A femicide data platform was announced for launch in August 2026 by a non-governmental organisation, included here because it is the country's gender-based-violence data infrastructure and the state has none (femicide).	ADVANCED
Uganda	A mapping report on procurement portal conformance with an infrastructure data standard was presented, and no delivery record has followed. The authority committed to reflecting the data points in a coming upgrade; no delivery record since (mapping). It is the only open-data item in this ledger. No national open-data portal, catalogue or policy appears anywhere in it.	NO CHANGE
Zambia	A national spatial data infrastructure policy and portal was launched, and a national carbon registry launched with counts given by the permanent secretary. The spatial policy and portal were launched in the capital; the event date is inferred from a relative reference in a June 2026 report, and the policy document itself is not held (spatial, open source). The carbon registry's launch counts — more than 90 carbon projects at stages of approval, and bilateral agreements with three European states — are the permanent secretary's own (registry), and no public access, transaction count, custodian ministry or disclosure rule for its holdings is stated (holdings). A registry of tradeable environmental assets with no published disclosure rule is worth naming as the transparency question it is.	ADVANCED
Zimbabwe	The statistics agency runs a second version of its open data portal, while the strategy's own data platform and a data commons remain announcements. A second version of the statistics agency's open data portal is in use, with an openly published sustainable development goals portal launched on 9 July 2025 and an access and tutorial guide issued for it (guide). The guide mixes several dates and carries none of its own, and no dataset count, download figure or licence statement is held. The artificial-intelligence data platform is provided for in the strategy and is to be introduced gradually (platform, launch). The data commons was announced in August 2026 (commons). Neither announced instrument carries a dataset, custodian, licence or access rule. What is actually open is one agency's portal; what is promised is a platform and a commons under a strategy with no legal force.	ADVANCED
