

PROGRESS REPORT

EU activities: progress report, September 2025 – September 2026

Edition of 2026-09-09-2 · compiled by Claude Opus from the documents in the Corpus repository

52 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has **No evidence** on it in its own report.

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

The place reports do not share one window; the period above is the range they span.

EU MoUs, engagements and commitments

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	An Italy telecommunications and postal cooperation memorandum signed in July 2025 stands alongside the submarine cable project. The memorandum was signed on 28 July 2025 at a fifth high-level summit and is in force, with the submarine cable project sitting alongside it. Nothing moved on it in the window, and the cable it sits beside remains a memorandum with no build contract, route or landing date. It is the only European instrument the base holds for this country, and no European Union programme, financing or regulatory cooperation appears anywhere on the ledger.	NO CHANGE
Angola	A French-financed earth-observation satellite passed a system milestone in May 2026 and is under construction, on about EUR 225m secured in January 2025. 2026-05-14 — a system key-point milestone was validated on the earth-observation satellite, which entered construction after a March 2026 kick-off with first ground infrastructure delivered from June 2026 and a design of more than 1,000 high-resolution images a day. Financing of about EUR 225m was signed with France in January 2025, with no build started at that point. No launch date is published, and no source states what the imagery is for: no agricultural, meteorological, cadastral or disaster-response programme on this ledger names it as a source. It is the largest single European commitment on the ledger and the only one with construction behind it.	ADVANCED
Botswana	A EUR 1,500,000 digital transformation facility committed in 2022 still shows nothing disbursed. A cooperation facility for digital transformation was committed in 2022 with an activity period running to 2030, at EUR 1,500,000, with nothing disbursed at the record's access date. It is a grant record only and no delivery milestone on the Botswana side is held. Four years of a nine-year facility with no disbursement is the position. The minister has named three European states assisting on legal-framework alignment, and no instrument, value or timeframe for that assistance is stated anywhere on this ledger — so the European contribution to the country's digital statutes is visible in outcomes and invisible in documents.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Burkina Faso	The European country programme ended on 31 December 2024, the Commission recording that conditions for a medium-to-long-term framework are no longer met. The multiannual country programme ended on 31 December 2024 by Commission decision, the Commission recording that conditions for a medium-to-long-term cooperation framework are no longer met, replaced by a EUR 238m envelope for countries in complex settings held inside the regional programme and shared with three other states. The original programme had carried digitalisation as a cross-cutting theme with no allocation of its own, and the 2025 to 2027 allocations it reserved to a later decision were never supplied. So the country lost a bilateral framework in which digital had no money, and gained a share of a regional envelope in which it has none either. What activity there is runs through member-state channels instead, and the Sahel connectivity project reported under digital divides was funded that way.	REGRESSED
Burundi	A regional digital economy programme formally started covering Burundi, and three digital tools were handed to a ministry, against no bilateral digital priority. The bilateral programming instrument carries no standalone digital or data priority area for Burundi; digital appears transversally across the three priority areas – a negative finding, and the frame everything else here sits in. 2026-06-24 – a forum marked the formal start of a co-financed regional digital economy programme covering Burundi as one of eight partner states: digital transformation strategy, e-commerce, interoperable cross-border payments, e-government and cybersecurity. It is the most concrete European digital commitment reaching Burundi, and it reaches it regionally rather than bilaterally. 2026-07-14 – three digital tools were formally handed to the responsible ministry through a UN agency, with a vehicle, seventeen motorcycles and training for 47 officials and 13 managers.	ADVANCED
Cameroon	The EU signed a FCFA 9.83bn grant for digital SME competitiveness in June 2026. The European Union signed a grant convention of FCFA 9,830,000,000 with Cameroon to strengthen the digital competitiveness of very small, small and medium enterprises, one of three financing conventions signed the same day at the Cameroon-EU Economic Forum. Further EU grants covering digital, cocoa and forests followed. The EU's Multiannual Indicative Programme for 2021 to 2027 names digitalisation of administrative procedures and generalised access to dematerialised information as a governance-efficiency objective. No Global Gateway country package for Cameroon and no delegation statement on data adequacy is held.	ADVANCED
Cape Verde	A EUR 300 million gateway package stated in the FY2025 budget speech has no signed instrument, allocation or disbursement. A digital-transformation pillar and a cybersecurity strand were stated as intentions in the FY2024 budget speech, and a EUR 300 million gateway package in the FY2025 speech. Neither has a signed instrument, allocation or disbursement held, and these are intentions stated in budget speeches rather than appropriations. What did happen is smaller and specific: European Union representatives took part in the data and artificial-intelligence strategy kick-off of 28 April 2026, and the telecom guarantee resolution of 20 April 2026 invokes the gateway framing.	NO CHANGE
Central African Republic	European financing runs a civil-status modernisation programme and a EUR 17.5m four-year programme digitising administrative fee collection across about twenty ministries. 2026-04-14 – an implementation workshop with three pilot ministries opened a programme financed at EUR 17.5m over four years, of which EUR 8.5m to one justice component, targeting the small revenues of about twenty ministries and covering issuance of the nationality certificate. It is a single source and no domestic appropriation for it is on file. 2026-02-20 – a steering committee validated the implementing partner's 2025 activities on the civil-status modernisation programme, extending from a capital-and-corridor pilot to new communes with a target of 400,000 birth certificates by 2028, also a single source with no financing figure stated. Between them these two programmes carry the country's civil registration and its non-tax revenue collection, and neither appears in the national estimates – which is the fiscal shape of the whole digital record here.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Chad	European money built the digital Journal Officiel and the police data centre; no regulatory alignment instrument exists. The European Investment Bank financed three feasibility studies in December 2020 on high-speed broadband, improved telecommunications and connectivity for remote rural communities, described by the Bank as its first targeted digital cooperation with Chad (studies). What has since been delivered is state machinery: the Journal Officiel platform launched in May 2026 on European funding with United Nations technical support (platform); the police data centre and forensic-science unit inaugurated in September 2025 under a European-financed regional police programme (centre); and computing and archiving equipment to the Supreme Court in February 2026 (equipment). No adequacy process, data-protection convergence or digital-trade chapter is held.	ADVANCED
Comoros	A European electronic administration project launched on 16 October 2025, covering a single online window and interoperability. 2025-10-16 - the project was officially launched, its stated scope covering a national portfolio of public services, a single online window, procedures conducted electronically, inter-ministerial interoperability and strengthening of the data-protection legal framework. It is the only European digital-governance instrument the base holds for this country. No financing figure, end date or delivery milestone is stated in any account held, so the launch is all there is - and its interoperability component is the second such layer provided for by a donor project, neither of which operates.	ADVANCED
Congo	The European limb of the transformation project began procuring, and a member-state development bank channel opened. A bank loan was agreed in December 2022 and a grant in December 2023, on a consolidated envelope of EUR 136.5m. The same envelope is now procuring: a 24-month cybersecurity strategy, training plan and national conferences mission is out to open international tender with bids closing 2 September 2026, the notice publishing no value. 2026-07 - an exploratory working session at the digital agency opened a channel with a member-state development bank under the European gateway programme, on institutional capacity, structuring digital projects, public-service modernisation and the innovation environment, with no instrument signed and no commitment, sum or timetable named - notable for putting a member-state development bank rather than the Commission at the front of the approach.	ADVANCED
Cote d'Ivoire	The Commission launched negotiations for a bilateral investment-facilitation agreement in July 2026, naming digital innovation among its target sectors. The standing instrument is the country programming act, which sets three priority areas and names a distinct digital governance strand committing the Union to strengthen and operationalise the country's normative digital framework in line with regional and European standards, to digitise the public administration, and to digitise citizen- and business-facing services in urban and remote areas, running 2021 to 2027. 2026-07-17 - the Commission launched negotiations for a bilateral sustainable investment facilitation agreement alongside the interim economic partnership agreement, naming digital innovation among its target sectors and stating the talks will also address cocoa traceability; Union foreign direct investment stock reached EUR 3.8bn in 2024, over 40% of the total. No negotiating round, text or conclusion date is published.	ADVANCED
Djibouti	The Europe-Africa-India digital corridor was presented in October 2025, centred on a cable landing in Djibouti. The framework is a country partnership financed mainly through the union's external instrument at EUR 82m for 2021 to 2027, covering enterprise digital capacity, digital skills, digitalisation of public services and the Blue Raman cable with Djibouti as a landing point. 2025-08-21 - an assessment of eleven strategic corridors, one running to Djibouti, identifies digitalisation as the hardest investment objective among them. 2025-10-10 - the Europe-Africa-India digital corridor was presented at the Global Gateway Forum, centred on the 11,700 km Blue Raman cable landing in Djibouti, India and Oman. 2025-11-24 - the union co-launched an EUR 7m skills programme.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
DR Congo	Over EUR 180m in new EU and Team Europe investments was announced at the Global Gateway Forum on 9 October 2025. President von der Leyen met President Tshisekedi at the 2025 Global Gateway Forum on 9 October and announced over EUR 180 million in new EU and Team Europe investments across the Kivu-Kinshasa Green Corridor, Lobito Corridor value chains, Kisangani electrification and critical raw materials cooperation, building on a 2023 memorandum on critical raw materials. None of it names digital regulation, data adequacy or a digital governance instrument, and the base holds no EU financing agreement or delegation statement on any of those.	ADVANCED
Egypt	The minister discussed cloud sovereignty with a European vendor's regional president; no instrument is signed. The base carries no statement of the country's position on sovereignty over data hosted on European vendor platforms at the window's opening. 2026-03-31 - talks covered expanding outsourcing operations and investment, cooperation on cloud computing to support the push for greater sovereignty over data and applications hosted on those platforms, artificial-intelligence rollout, and a joint study of labour-market demand; no agreement, value or timetable is stated. It is the only source that touches the country's digital relationship with a European counterparty at instrument level, and it establishes talks only - in a year when the country ran the largest spectrum award on this ledger, hosted a continental settlement system and chaired two Arab working groups.	ADVANCED
Equatorial Guinea	The Commission's own page records no delegation and no country programme for Equatorial Guinea. The country page is the clearest statement of absence in this unit's file: no European Union delegation, no country programme under the external financing instrument, ties handled from a neighbouring capital. European engagement is bilateral and unresolved: the President pressed Spain in October 2025 to return funds after a ten-year delay on a stalled digital terrestrial television project.	NO CHANGE
Eswatini	The third partnership dialogue in May 2026 brought digital and science policy into the formal agenda; no financing figure for digital work is held. The dialogue was co-chaired by the European Union ambassador and the foreign minister under the successor partnership agreement, and discussed cooperation under the Union's investment strategy and its education and research programmes (dialogue). Separately the Union, its member states and the German development agency support the drafting of the national data policy under a data governance initiative for Africa (support). That drafting support is the one concrete European contribution to a digital instrument the base records. No named financing instrument, commitment amount or programme document covering digital work is held at any date.	ADVANCED
Ethiopia	The EU announced resumed budget support and a EUR150m digital economy package at the April 2026 business forum (announcement). At the EU-Ethiopia Business Forum of 20-22 April 2026 the EU announced the resumption of over EUR140m in budget support, a EUR150m digital economy package and EUR130m in new lending from the European Investment Bank, and noted results delivered under the EUR269m renewable energy and digitalisation programme (announcement). That programme was signed in September 2025 on the margins of the Africa Climate Summit, a EUR120m contribution from the EU and the French development agency to modernise power and digital infrastructure (signing). The governing framework is the EU's multiannual indicative programme for 2024-2027, adopted in September 2023 (programme). The digital economy package is an announced commitment; the base holds no signed instrument or disbursement against it.	ADVANCED
Gabon	The EU's Multiannual Indicative Programme 2021-2027 sets three priority areas, none of them digital. The Gabon-specific programming instrument under NDICI-Global Europe, adopted as annex to Commission decision C(2021)9138, sets three priority areas of EU cooperation — green transition, sustainable growth and green jobs, and governance — with objectives, expected results, indicators with baselines and targets, possible blending and EFSD+ investment guarantees, and a proposed Team Europe Gabon initiative. It is the standing statement of what the EU has committed over the period, and digital is not one of its priority areas. No Global Gateway country package for Gabon is held.	NO CHANGE a standing instrument the base holds for the first time

COUNTRY	DEVELOPMENTS	PROGRESS
Gambia	EUR 193m of grants programmed for 2021-2027, with digitalisation named as one clause under jobs and growth. The Commission's country page puts the programme at EUR 193m of grants for 2021-2027 and mentions digitalisation only as a clause inside the jobs and growth priority, so the digital share is not stated. Two delivered items are dated and specific: a EUR 493,346 platform tracking 237 national development plan indicators launched in April 2026 with no named maintenance plan, and the fingerprint identification system launched in May 2026 with police and European support.	ADVANCED
Ghana	The 2021 to 2027 programme gives digital no priority area of its own, with EUR 136m supplied for 2025 to 2027 at the mid-term review. The EUR 203m for 2021 to 2024 is followed by EUR 136m split between green growth for jobs at EUR 42m, smart and sustainable cities at EUR 45m, good governance and security at EUR 40m and support measures at EUR 9m (programme, amendment). The document's own diagnosis is that the information technology agency lacks both the technical capacity for integrated digital-government planning and the funding to implement the platforms government envisages, which is the sharpest external assessment of the delivery problem the base holds.	NO CHANGE
Guinea	A European co-financed cable reached a construction and maintenance agreement in May 2026 for a Mediterranean-anchored system. The agreement is the only European engagement the base holds (agreement). No programme, financing envelope or cooperation instrument accompanies it, so European involvement in the country's digital build reaches the record as one cable and nothing else.	ADVANCED
Guinea-Bissau	European funding runs through programmes rather than instruments — the justice caravans are one. No European Union memorandum or country digital programme appears in the base for Guinea-Bissau. What appears is co-financing of specific operations: the third mobile justice caravan launched jointly with the development programme in June 2026, using the digital registration system for children's birth registration. European involvement is otherwise institutional and educational: a Portuguese polytechnic opening places for Guinean students in informatics and telecommunications.	ADVANCED
Kenya	A European data-adequacy decision is described as in prospect, on a third party's passing reference with no application or timetable stated. No European Commission or government statement is on file (reference). Cooperation was separately reaffirmed at principal-secretary level across artificial intelligence, cybersecurity, digital identity, interoperability and digital governance, with no agreement text, workplan, timetable or funding figure published (cooperation).	ADVANCED
Lesotho	European engagement on file is the digital birth registration programme run with the European Union and UNICEF since April 2025. The programme launched on 2 April 2025 with the European Union and UNICEF as partners (launch). No value, term or wider European digital engagement is recorded, and no European Union instrument covering the country's digital transformation is held.	NO CHANGE
Liberia	The Commission proposed terminating the EU-Liberia forest agreement in September 2025 after a decade without operative licensing. The voluntary partnership agreement signed in 2011 and in force from December 2013 is the only Liberia-specific EU treaty instrument, and its operative content is a system: the chain-of-custody information system and legality assurance database Liberia was to build for timber licensing and traceability. The licensing target slipped across successive committee meetings — the fifth aide memoire of April 2017 records it as then targeted for 2020 — and in September 2025 the Commission proposed termination after a decade without an operative scheme. It is a proposal, not an adopted termination. EU funding separately delivered the satellite receiving station installed in October 2025.	REGRESSED

COUNTRY	DEVELOPMENTS	PROGRESS
Libya	European engagement on file is one programme: GIZ's municipal support, funded by the European Union and Germany, behind a municipal assistant in pilot. BaladiyaBOT is being developed under the GIZ Support to Municipalities in Libya III programme, funded by the European Union and the German development ministry, and development began on 19 April 2026 (programme). No value, duration or wider European digital engagement is recorded, and no European Union instrument covering the country's digital transformation is held in this base.	ADVANCED
Madagascar	Enhanced partnership agreement negotiations concluded in June 2026, carrying a digital trade chapter. A sustainable fisheries partnership agreement has been in force since December 2023, committing the parties to fisheries control, monitoring and surveillance (agreement). Negotiations on an enhanced economic partnership agreement with four Eastern and Southern African states concluded in June 2026 (conclusion), carrying digital trade and customs assistance chapters bearing on cross-border data flows (summary). The digital trade chapter's own text is not held — the capture of the Commission's summary stops before it — and the agreement is not signed or ratified.	ADVANCED
Malawi	A EUR 143 million annual action plan launched on 21 August 2026, after a partnership dialogue in April. The standing frame is the EUR 480 million partnership for 2021 to 2027, whose named digital-connectivity commitment is the regional fibre connectivity programme. 2026-04 - the fourth partnership dialogue was held on 16 April 2026, covering new gateway investments. 2026-08 - a EUR 143 million annual action plan was launched on 21 August 2026. Three dated records, one named digital commitment and no digital share stated in any of them. What the money buys in this sector is not knowable from the base, which is a different problem from the money not existing.	ADVANCED
Mali	There is no dedicated 2025-2027 country programme; the country is funded instead from a regional complex-settings allocation, with no digital activity named. The Commission's country page states the country is funded from the central-Sahel complex-settings allocation for 2025 to 2027 rather than a dedicated country programme, against EUR 151m committed for 2021 to 2024 for growth and green economy and for human development and youth (country page). No digital or data-governance activity is named in either tranche, and no separate termination instrument was found, so what the base establishes is the disappearance of the country programme and not a decision to end digital cooperation.	REGRESSED
Mauritania	European financiers put more than EUR 43.5m into the second submarine cable, funded resilience work in 2020, and run a EUR 4m German cooperation project. More than EUR 43.5m was committed by the European investment bank and the union for the second cable connection, with construction under way and the cable not yet commissioned (financing, launch). A resilience submarine cable financing was committed in 2020 with no completion or outcome report held (resilience). A German cooperation project has run since January 2025 at EUR 4m, supporting the public digital service standards framework, with no output or completion report published (project, framework). European money is the largest single source in the country's digital record, and none of the three carries a published result.	ADVANCED
Mauritius	The European relationship on file is a data-protection adequacy assessment being pursued in 2026, with no application date, stage or decision published. Adequacy is being pursued with full alignment of the law to the European regulation, confirmed by the data-protection commissioner in May 2026 (assessment). No application date, assessment stage or decision is published, and no European funding instrument, memorandum or project for the country's digital programme is held. The relationship is regulatory rather than financial, which is unusual in this base.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Morocco	EUR20m of the 2026 EU action programme was reserved to the digital partnership (programme). The European Commission reserved EUR20m of a maximum EUR148m 2026 action programme to the digital partnership support programme (programme). The Commission's list of recognised third countries, current to August 2026, names sixteen jurisdictions plus one international organisation, none of them in Africa; an intention to seek adequacy was reported during 2025 (list, roundup). Convention 108 was ratified during 2019, the exact date not held (accession). Neither adequacy source is tagged to the country, and no Morocco-tagged governance source in the base mentions the European Union at all, which is itself the finding.	ADVANCED
Mozambique	Four agreements worth EUR 178m were signed in June 2026, of which EUR 28m is digital transformation and EUR 50m education and skills. The package was signed at a business forum on 9 June 2026, with EUR 28m for digital transformation focused on women's participation in the digital economy and the recipient organisation unspecified (package). A further EUR 50m covers preparing students for a digital and sustainable future, with no recipient organisation, work plan or disbursement named (education). No disbursement against either is recorded, and an earlier European digital programme committed in 2022 has nothing disbursed on the published record.	ADVANCED
Namibia	The European indicative programme has no digital priority area, allocating EUR 26,000,000 for 2025-2027 with digitalisation only cross-cutting. The initial 2021-2024 envelope was an indicative EUR 37,000,000, and the mid-term review set the 2025-2027 allocation at EUR 26,000,000: inclusive green growth twenty, good governance and gender equality two, support measures four, and foundational skills education nil (amendment, programme). The named digital offer is support to Parliament's electronic-parliament blueprint, and data protection and cyber security appear once in the programme, qualified as possible.	NO CHANGE
Niger	The European country programme ended on 31 December 2024, replaced by a EUR 238m complex-settings envelope inside the regional programme. The programme was ended by a Commission implementing decision and replaced by a regional envelope rather than a dedicated country allocation (decision). No digital or data-governance activity is named in either the ended programme or the replacement envelope, so what the base establishes is the disappearance of the country programme and not a decision to end digital cooperation.	REGRESSED
Nigeria	A EUR 820m digital envelope was stated at a workshop, a EUR 45m package was signed in 2025, and a Danish case-management platform is deployed across federal ministries. The envelope was stated at a framework validation workshop rather than in an instrument, alongside a national innovation hub standards framework that is validated rather than adopted (envelope, gateway). A digital economy package of EUR 45m was signed in December 2025 (package). The case-management platform is deployed with a Nigerian provider across federal ministries on the assurance that all sovereign data remains in Nigeria (platform). A cyber and digitalisation memorandum was signed with Finland in March 2026 (cyber), and Sweden signed a connectivity memorandum (connectivity).	ADVANCED
Rwanda	No European adequacy decision has been sought or granted, on a desk review whose counts are round estimates single-sourced to a secondary tracker. None has been sought or granted (adequacy). The country holds a data protection law fully in force since 2023 and a named supervisory authority, so the absence is not for want of a regime. Nothing on file records an application, an assessment or a stated intention to seek one.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Sao Tome and Principe	A new four-year fisheries protocol worth 3.3 million euros was signed in October 2025, over a 2021-2027 indicative programme mobilising 13 million euros to 2024. The delegation's country record states that relations are governed by the partnership agreement, describes a partnership dialogue in May 2024, sets out the multiannual indicative programme with 13 million euros mobilised for 2021-2024 across governance, green transition and human development, and records about 5.3 million euros more through regional programmes (record). The protocol's own text splits its 3.3 million euros over four years into 325,000 euros a year for access against a reference tonnage of 6,500 tonnes and 500,000 euros a year of sectoral support, the latter funding monitoring, control and surveillance against illegal fishing, scientific stock assessment and the value chain (protocol); it applies provisionally from 6 October 2025 (signature). The digital content of the relationship sits in the electoral reform project, which built the registration platform and trained the technicians who maintain it (project).	ADVANCED
Senegal	The delegation's own statement names no standalone digital memorandum; a EUR 13m package runs to July 2027. The delegation states the union's investment strategy is the frame, implemented through Team Europe with the private sector, and that under the digital transition strand it accompanied Senegal in drawing up its data-management and artificial-intelligence strategies and will support implementation of the priority actions those strategies set out. No standalone memorandum on the digital economy, data or digital governance was located. The financing is concrete where the instrument is not: EUR 13m running 1 August 2024 to 31 July 2027, funded by the union, the German state and France, on three axes, with named work training public actors in artificial intelligence and supporting 20 startups developing artificial-intelligence and geospatial products. The publisher there is a French implementing agency rather than a union institution, and it names no signed instrument between the union and Senegal.	NO CHANGE cooperation runs through programming and Team Europe financing rather than a standalone instrument
Seychelles	The EU and Seychelles concluded an enhanced trade agreement in June 2026 barring unjustified data localisation and duties on electronic transmissions. The ninth political dialogue of October 2022 recorded an agreement to explore cooperation on cybersecurity, disinformation, safer internet use and the protection of personal data (dialogue). In June 2026 the Union and four eastern and southern African states including Seychelles concluded negotiations on an enhanced Economic Partnership Agreement, described as the Union's first modern comprehensive free trade agreement with sub-Saharan African partners, carrying a binding prohibition of unjustified data-localisation requirements and a permanent ban on customs duties on electronic transmissions (agreement). The 2026-2030 fisheries protocol sets confidentiality and personal-data rules for electronic vessel data exchanged between the parties (protocol).	ADVANCED
Sierra Leone	The Multi-Annual Indicative Programme 2021-2027 carries digital targets, and the first EIB loan to a domestic bank was signed in October 2025. The programme carries digital transformation and data technology among the EU priorities and sets targets of 650,000 people benefiting from EU-supported digital services and 100,000 with enhanced access to digital government services, from a baseline of zero, alongside an integrated national civil register of vital statistics (programme). The European Investment Bank signed EUR 10 million with Vista Bank (SL), its first intermediated loan to a Sierra Leonean bank, under EFSD+ and the Global Gateway strategy (loan); a EUR 22 million green mini-grid facility launched through the EU delegation in October 2025 (facility). No progress report against the programme's digital targets is published, so the base holds the targets and nothing measured against them.	ADVANCED
Somalia	An EU-funded project launched a network linking three innovation hubs in July 2026; no bilateral digital instrument is held. The project convened innovation forums in Mogadishu and Hargeisa, centred on the launch of a network linking three of the leading innovation hubs under a memorandum, into a community of practice with harmonised incubation standards (launch). That is a funded programme delivered through an implementing agency, not a government-to-government instrument. No European Union or European Investment Bank digital financing, memorandum or programme naming Somalia directly was located.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
South Africa	Team Europe announced a package of nearly EUR 12 billion covering digital connectivity among other areas, and the science and technology committee met for the eighteenth time. 2025-10-09 — a package of nearly EUR 12 billion was announced covering digital connectivity among other areas, building on EUR 4.7 billion announced at the March summit, at which the two sides committed to cooperate on artificial-intelligence governance and the Global Digital Compact. The digital share of the package is not itemised anywhere on the record, so what reaches connectivity is not derivable from it — which is the standing difficulty with headline figures of this kind. 2026-06-18 — the joint science and technology cooperation committee met for the eighteenth time, marking thirty years of the bilateral agreement, with commitments on wider research-programme participation and bilateral artificial-intelligence cooperation.	ADVANCED
South Sudan	EUR 304 million was allocated 2021-2024 under the programming framework, with no digital instrument named within it. The partnership runs under the 2021-2027 programming framework and the Global Gateway strategy, with EUR 304 million allocated between 2021 and 2024 across agri-food systems, jobs and education, health, migration and governance (partnership). A further EUR 35 million of humanitarian funding was allocated in November 2025 within a EUR 143 million sub-Saharan package (humanitarian), and the Council reviewed and maintained the restrictive-measures listing of a serving minister in June 2026, updating it to reflect his move to the justice portfolio (sanctions). Development money and a sanctions listing running at once. No digital-sector instrument is named in either.	ADVANCED
Sudan	The EU's October 2025 Council conclusions set political and humanitarian asks and carry no digital programme, financing or memorandum. The Foreign Affairs Council approved conclusions on 20 October 2025 reaffirming commitment to Sudan's sovereignty, unity and territorial integrity, setting four political asks — a ceasefire, humanitarian access, inclusive civilian governance and accountability — and committing to intensify restrictive measures where warranted (conclusions). Nothing in the captured paragraphs names digital infrastructure, connectivity or digital public infrastructure. No EU or European Investment Bank digital financing, programme or memorandum covering Sudan was located anywhere in the base.	NO CHANGE
Tanzania	The first Samoa Agreement dialogue recorded EUR 726 million for 2021 to 2027 and named no digital instrument. The first partnership dialogue under the Samoa Agreement, held in December 2024, produced a joint communique recording European commitments of EUR 726 million for 2021 to 2027, a planned security dialogue and Tanzania's first request under the European Peace Facility. No standalone digital instrument is named in it. European digital money reaches Tanzania through project financing instead — a rights and gender equity centre with EUR 3,000,000 committed is the base's clearest example — so the bilateral record and the funding record do not meet.	NO CHANGE
Togo	The largest European digital commitment found is about EUR 24 million signed in May 2026 under a European guarantee. Poland's development bank signed long-term financing of about EUR 24 million on 18 May 2026 as the first phase of an investment of more than EUR 80 million over twelve years in the cybersecurity joint venture, secured by a European guarantee; the European Union ambassador is quoted calling it the first European-supported digital investment in Togo under the connectivity strategy. The standing framework is the joint programming document for 2021 to 2027, associating the Union with Germany and France and naming the digital economy within a broader inclusion priority, with no digital-specific amount or date stated. European money also funds training — the digital ambassadors sessions and the summer school.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Tunisia	The 2023 strategic partnership memorandum commits both sides to digital cooperation and names the Medusa cable, and remains non-binding. The memorandum on a strategic and global partnership, signed at Tunis on 16 July 2023, commits both parties in its digital-transition section to cooperate on capacity building, technological cooperation, financing and joint projects, names the Medusa submarine cable as a connectivity opportunity and Tunisia's potential role as an Africa connectivity hub, and undertakes to assess Tunisian participation in the Digital Europe Programme. It is a political framework and not an instrument: nothing held records whether the Digital Europe Programme assessment was carried out, and the concrete European money in this ledger — the cable grant and the operator loan — sits under project financing rather than under this text.	NO CHANGE
Uganda	A regional infrastructure acceleration technical assistance tender was published with requests to participate due September 2026, and a national funding window for a sovereign infrastructure loan package was named within it. The tender was published in July 2026 (tender), and the delegation's funding is named as an added national window inside it (window). A separate regional project pipeline consultancy was tendered in August 2026 under the same programme; the record is a procurement notice, so it fixes the consultancy stage and nothing about any project it may prepare (pipeline). Three procurement notices and no financed project is the state of the European relationship on this record.	ADVANCED
Zambia	Over EUR 200 million in Team Europe investments and a 2026 partnership dialogue, on a raw materials rather than a digital agenda. A signed memorandum establishes a critical raw materials strategic partnership, the founding instrument of the relationship. 2025-11 — more than EUR 200 million in Team Europe investments was announced at a corridor business forum, deepening the raw materials memorandum and the connectivity commitments. 2026-02 — a partnership dialogue was held at which the Union welcomed an invitation to deploy an election observation mission and reaffirmed corridor and raw materials cooperation. None of the three carries a digital or data component of its own. That is the finding: the largest external partnership on this ledger is minerals and corridors, and digital appears in it nowhere.	ADVANCED and not about digital
Zimbabwe	The multiannual indicative programme for 2021-2027 carries no digital priority area, and no country-specific artificial-intelligence or adequacy instrument is held. The programme was adopted under a Commission implementing decision and has no digital priority area (programme). No domestic artificial-intelligence or adequacy instrument with the bloc is held at any date. The only European involvement in this ledger is a commissioned data-centre market brief and an accelerator at expressions-of-interest stage.	NO CHANGE
