

PROGRESS REPORT

India activities: progress report, September 2025 – September 2026

Edition of 2026-09-09-2 · compiled by Claude Opus from the documents in the Corpus repository

46 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has **No evidence** on it in its own report.

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

The place reports do not share one window; the period above is the range they span.

India MoUs, engagements and commitments

COUNTRY	DEVELOPMENTS	PROGRESS
Angola	An Indian credit line announced in May 2025 carries US\$200m for defence, with digital public infrastructure a separate pledge carrying no money. The joint statement of the May 2025 state visit records a US\$200m defence credit line, with digital public infrastructure, space technology and capacity building as a separate pledge carrying no money. Secondary reporting framed the digital component as part of the credit line, and the base corrected its own framing in favour of the primary. No contract, vendor or engagement has been recorded since, confirmed at a reconcile pass in July 2026. The digital identity platform now out to tender, reported under digital identity, names no Indian involvement.	NO CHANGE
Benin	India's instruments date from the 2019 state visit: four agreements and a US\$100m line of credit. The joint statement of President Kovind's state visit of 28 to 30 July 2019 records four signed instruments — cultural exchange, telemedicine and tele-education, visa exemption, and export-credit and investment-insurance cooperation — and a US\$100 million Indian line of credit. The telemedicine and tele-education memorandum is the digital limb of the relationship. Nothing reports its operation, its outcome, or any Indian digital instrument since.	NO CHANGE nothing on the record since 2019
Botswana	The first presidential visit from India took place in November 2025, with cooperation agreed across digital technology among other fields. 2025-11-12 — India's President visited Botswana for the first time, with cooperation agreed across trade, energy, health, education, defence and digital technology, and a pharmacopoeia agreement signed. 2025-12-17 — the minerals and energy ministry signed a memorandum with India's KP Group envisaging about \$4bn of renewable energy and transmission infrastructure. 2026-04-01 — India's official country brief is the fullest statement of the relationship the base holds. No instrument from the visit is published, and the memorandum carries no build on the record.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Burkina Faso	India's one dated, valued commitment is a US\$25m rural electrification line of credit signed on 29 March 2013. India's Ministry of External Affairs country brief records a 1994 Joint Commission agreement, ITEC and ICCR training cooperation, several lines of credit, India-Africa Forum grant projects, trade figures and recent high-level visits. The one with a stated amount and signature date is a US\$25 million line of credit for rural electrification signed on 29 March 2013. None of the instruments is digital: no Indian supplier contract, technology programme or digital line of credit naming Burkina Faso is held.	NO CHANGE several instruments and none of them digital
Burundi	Talks opened on adapting an India Stack-style identity linked to instant payments, with nothing signed. 2026-06-23 — talks opened on adapting the Indian digital public infrastructure model, an Aadhaar-style identity linked to instant payments, reported again a week later and as a partnership on digital identity. Nothing has been signed. The fit is closer than most such talks: the country has an instant payment system live since April 2026 and a biometric identity card technically ready and waiting on its instrument, which are the two halves the model joins. No memorandum, technical assistance agreement or timetable has followed.	ADVANCED
Cameroon	India committed FCFA 1.4bn under the Pan-African e-Network country accord of 3 September 2007. The Pan-African e-Network country accord was signed on 3 September 2007 by Cameroon's Minister of External Relations, against a commitment from the Government of India of FCFA 1,400,000,000 covering network implementation, recurring costs and five years' maintenance. India's Commerce and Industry Minister named digital technologies among areas for expanded cooperation when he met the Prime Minister at WTO MC14 in Yaounde on 26 March 2026, and invited Cameroon to the India-Africa Conference. The 2026 contact is an expression of interest and not an instrument. Nothing reports what the e-Network delivered or whether it still runs.	NO CHANGE one valued instrument and it is nineteen years old
Cape Verde	India's one engagement of record is the Pan-African e-Network, inaugurated in Praia on 29 July 2010. The Pan-African e-Network was inaugurated in Praia on 29 July 2010, implemented by the Indian state company TCIL with NOSi and financed by the Government of India, connecting Cabo Verdean institutions over fibre and satellite to a TCIL data centre and studio in New Delhi, to twelve Indian hospitals and seven Indian universities, and to five regional African universities and five hospitals, for tele-education, telemedicine, videoconferencing, internet access and e-government. The base carries nothing on the network after that date — no operating report, no closure notice, and no later Indian line of credit, technical-cooperation record or forum commitment naming Cabo Verde.	NO CHANGE nothing on the record after 2010
Chad	An Indian digital partnership reached a ministerial meeting at which a memorandum was intended and no timeline was announced. The scope asked for was training of Chadian engineers in artificial intelligence, support to the national information technology school, and digitalisation of postal services including a postal bank (partnership, meeting). No memorandum was signed and no timeline was announced. What the country asked for is on the record and what it received is not.	NO CHANGE
Comoros	Six memoranda from October 2019 remain the standing framework, one of them on tele-education and tele-medicine. India's own bilateral brief of April 2026 states that the six memoranda signed at the October 2019 vice-presidential visit remain the standing framework, among them one on participation in the tele-education and tele-medicine network project - the clearest digital commitment on record. Seven years on, nothing on file says what was delivered under it: no facility, no enrolment, no consultation count. 2026-03 - the embassy's own chronicle records a training-programme day held in Moroni on 24 March 2026 attended by Comorian ministry secretaries-general, and a vehicle handover the following day; the record does not name a digital or technology course delivered at it. No Indian telecom investment, submarine cable or data-centre project involving the Comoros is on file.	NO CHANGE a 2019 framework still standing with nothing delivered under it on record

COUNTRY	DEVELOPMENTS	PROGRESS
Congo	India's presence is a Pan-African e-Network node in Brazzaville and Airtel's 2010 market entry. India's own country brief records tele-education, telemedicine and a VVIP connectivity node set up in Brazzaville under the Pan-African e-Network Project, and Bharti Airtel's 2010 acquisition of Zain Communications Network, which established its Congolese telecom operations. The brief is the current standing statement of the relationship and it dates nothing digital after 2010: no line of credit, export-bank facility, IT services contract or capacity programme naming Congo is held.	NO CHANGE nothing dated after 2010
Cote d'Ivoire	A five-year memorandum with an Indian technology company was executed in August 2026, while the technology park's raise is unsecured. 2026-08-19 - a five-year memorandum between an Indian technology company, a continental investment council and an Ivorian mobile operator was fully executed, covering fibre backbones, mobile networks, cable landing stations, exchange points, towers, and identity, interoperability, e-government and payment platforms. It is known only from the company's regulatory filing, and no country programme, project, site or value is named. The technology park has operated since 2004 across more than 600 hectares and is seeking US\$311m for its plan to 2028, with an Indian export-credit bank the original infrastructure lender. The state portfolio report puts it at a first 180-hectare tranche complete with about ten firms housed, and records the operating company among digital holdings whose results fell in 2023.	MIXED a five-year infrastructure memorandum was executed while the technology park's US\$311m raise is still not established as secured
Djibouti	Indian companies were invited to the national artificial-intelligence forum of September 2026. Nothing was held on this at the period's opening. The standing relationship is a platform one: a memorandum with an India-based foundation to deploy an open-source service platform with capacity transfer, signed in December 2024. 2025-10-10 - the Europe-Africa-India digital corridor was presented, resting on a cable landing in Djibouti, India and Oman, with a memorandum linking the European, Indian and African research networks. 2026-07-28 - the government invited Indian artificial-intelligence companies to its national forum of 2 and 3 September 2026, where the national strategy is to be presented. No bilateral instrument with India is on file.	ADVANCED
DR Congo	India's consolidated brief records instruments from 2008 to 2010, none of them digital. India's Ministry of External Affairs brief records a 2008 Joint Commission agreement, a 2009 cultural cooperation agreement, a May 2010 memorandum on regular Foreign Office Consultations, decades of ministerial visits, MONUSCO troop contributions and early signature of the International Solar Alliance Agreement. It is India's own authoritative statement of the relationship's standing state, and it names no digital instrument: no line of credit, training placement or supplier contract touching the digital estate is held.	NO CHANGE the relationship is on the record and its digital content is nil
Egypt	The two industry ministers agreed a joint study of priority sectors and discussed linking their payment systems. The base held no source at all on this relationship at the window's opening. 2026-08-07 - on the margins of a ministerial meeting the two ministers agreed a joint study of priority sectors for industrial and investment integration, covering market needs, value chains, joint manufacturing, incentives and tariff and non-tariff barriers, with financial technology among the named priority sectors; they discussed linking the two countries' payment systems and settling bilateral trade in local currencies, and one side proposed an industrial integration platform matching companies on joint production, component exchange and supplier development. The payment-system linkage is stated as under discussion only: no central bank, operator or payment rail is named on either side, and no instrument, value or date is given.	ADVANCED
Equatorial Guinea	India's brief records trade at US\$463m in 2024-25 and a digital technology course held in November 2025. India's own country brief is the only source in the base on the relationship: bilateral trade at US\$463m for 2024-25, and a digital technology course delivered under its technical cooperation programme in November 2025. No digital public infrastructure agreement, line of credit or system deployment is named, so the engagement is training and trade rather than infrastructure.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Eswatini	A US\$10.4 million India Exim Bank line of credit for the data centre's disaster recovery site is the only Indian instrument on the base. The line of credit was signed in 2021 for construction of a disaster recovery site for the national data centre under the science park's second phase (line of credit). Five years on the site is not recorded as operating, and the communications regulator was tendering consultancy for a disaster recovery facility in October 2025 (tender). No disbursement figure, completion record or later Indian instrument is held. It is the base's clearest case of a bilateral commitment whose delivery cannot be traced.	NO CHANGE one line of credit from 2021 and nothing since
Ethiopia	An Indian state rail telecom company announced a data centre build in January 2026, with nothing published since. The announcement is a press release from the Indian company stating an intention to build a data centre (announcement). No site, capacity, value, partner, timetable or Ethiopian counterparty is named, and the base holds no other Indian engagement, so the record is one press release and its silence since.	ADVANCED
Gabon	India's digital limb is a proposed capacity-building convention on modernising the public administration. India and Gabon discussed scholarships and a proposed multiannual capacity-building convention whose stated focus is digitalisation of the public administration. India's own country brief records memoranda on holding a Joint Commission Meeting and on foreign-service training cooperation, an investment memorandum between the two business chambers, a 2007 housing line of credit and ITEC and ICCR training places. Nothing digital is signed: the convention is a proposal, and no Indian supplier contract or line of credit touching the digital estate is held.	NO CHANGE a proposal rather than an instrument
Gambia	A digital public infrastructure memorandum signed October 2024, with no funding or milestones stated. India's own country brief records the memorandum signed in October 2024 and attaches neither funding nor milestones to it, so nothing in the base says what it is to deliver or by when. The delivery that is visible is training: the minister cited Gambian information-technology alumni among the officials trained under India's technical cooperation programme in March 2026. No Indian-built system is recorded operating in The Gambia.	ADVANCED
Ghana	An energy-transition memorandum was signed with an Indian company; no bilateral technology instrument is held. 2026-03-07 - the economy secretariat signed a memorandum with an Indian energy-transition company targeting up to 2,000 megawatts of renewable power over five years and 160,000 jobs through a special-purpose vehicle, with a first project of a 20-tonne-a-day biofuel plant, a 100-megawatt solar installation and 500 to 1,000 electric buses within 24 months. It is a commercial commitment with an Indian company rather than a state-to-state instrument, and no financing close or delivery against it is recorded. The bilateral technology relationship itself remains <i>Not held</i>: the base carries no sourced Ghana-India technology cooperation instrument, only the absence.	NO CHANGE a commercial energy memorandum with no technology instrument behind it
Guinea	India's one Guinea-specific digital instrument is the e-VBAB memorandum with TCIL, signed in Conakry on 2 August 2019. Of three memoranda signed in Conakry on 2 August 2019 during the Indian president's state visit, one is between Guinea's higher education ministry and Telecommunications Consultants India Limited for participation in the e-VBAB Network Project, the technology upgrade of India's Pan-African e-Network tele-education and telemedicine satellite platform. It is the only Guinea-specific Indian digital instrument on the record, and nothing reports its operation, its outcome or any successor.	NO CHANGE nothing on the record since 2019
Guinea-Bissau	No Indian digital engagement is recorded for Guinea-Bissau. Nothing in the base names an Indian agency, credit line, training programme or system in connection with Guinea-Bissau's digital estate. Where the country's officials have travelled for technology capacity building it has been to the Sino-Lusophone forum in Macau rather than to an Indian programme.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Kenya	A trilateral sovereign artificial-intelligence partnership targets 100 deployment programmes by 2030 on multilingual low-bandwidth voice systems. It was launched at a summit in February 2026 as a three-country arrangement, and no programme delivery, budget, participating institution or first deployment has been reported anywhere since (partnership).	NO CHANGE
Lesotho	The memorandum with India of July 2025 named digital identity, a unified payment environment and once-only exchange as priorities, and nothing under it is on record. The memorandum was signed during the Indian minister of state's visit to Maseru on 29 July 2025, naming those three priorities for the year (memorandum). No deliverable, workstream or funding under it is on record a year later, though both the identity and the interoperability workstreams recorded elsewhere in this ledger cite it as their starting point.	NO CHANGE
Libya	Libya and India agreed cooperation on artificial intelligence and quantum skills in February 2026, with no programme document published. The cooperation was agreed on 1 February 2026 and covers upskilling in artificial intelligence and quantum technologies (cooperation). No programme document, participant numbers, funding or delivery date has been published since, and no other Indian engagement is recorded in the base.	ADVANCED
Malawi	Officials met for a demonstration of India's unified payments interface on 10 April 2026; no memorandum was signed. India's own bilateral brief confirms a tele-education and tele-medicine network programme and a power-sector memorandum as the standing engagements. Neither carries a delivery figure. 2025-10 - the high commission's account of a business seminar names digital public infrastructure as a collaboration area. 2026-04 - officials met on 10 April 2026 for a demonstration of India's unified payments interface, the most significant distinct engagement in the window. No memorandum was signed, and the country already runs a national switch of its own, so what an interface built elsewhere would displace is the question the record does not answer.	ADVANCED
Mali	The Indian foreign ministry's bilateral relations brief is the record the base holds of the channel, and it carries no digital instrument. The brief is one side's own account (brief). Nothing in it is extracted here as a digital commitment, and no instrument, value or project is carried — which is itself the finding for a channel that elsewhere on the continent produces named lines of credit and technology centres.	NO CHANGE
Mauritius	The first bilateral cross-border payments agreement was with India in February 2024, and a new transoceanic cable would run between the two countries. The payments link has been in force since February 2024 as the country's first such agreement, with no volume or corridor figure published since (link). The cable participation commitment is to a system connecting the United States and India, behind which sits a signed non-disclosure agreement and unfinished negotiation (cable). Between them these are the country's two named Indian engagements, one operating and unmeasured, one committed and unsigned.	ADVANCED
Morocco	The country is turning to India to develop artificial intelligence adapted to its national languages, on an August 2026 report. The turn to India was reported in August 2026 as a stated direction rather than an agreement (report). No instrument, partner institution, language list, budget or timetable is published, so the base records an intention and nothing that would let a later run check whether it was acted on.	ADVANCED
Mozambique	An information technology park was delivered under an Indian concessional line of credit, with no location, value or completion date stated. The park is named in an Indian bilateral brief of April 2025 as delivered under a concessional line of credit; the brief states no location, value or completion date (brief). It is the only Indian digital engagement on record for the country, and nothing in the base establishes whether the park is operating.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Namibia	A cyber security memorandum was signed in July 2025 and cooperation was advanced at a joint trade committee in August 2026. The memorandum was signed at State House during a visit, alongside an entrepreneurship centre agreement, and no implementation activity, funding or programme has been reported since (memorandum). Cooperation was advanced at the fourth joint trade committee in New Delhi in August 2026, building on a memorandum signed by the two heads of government in July 2025, with bilateral trade put at more than US\$592m in 2025/26 (committee); the memorandum text is not held and no workstream, funding or timetable is attached (committee). A five-node computing cluster is separately specified for a university campus under a bilateral centre of excellence (cluster).	ADVANCED
Niger	A ministerial delegation visited ICRISAT's headquarters in February 2026 and confirmed a genebank contribution; no new bilateral agreement has been signed since 2023. The agriculture minister led a delegation to Hyderabad from 7 to 9 February 2026, launching the institute's Niger dossier and confirming a contribution toward its genebank — following through on the alliance renewal agreed in September 2025 with the foreign minister. India's own bilateral brief, current as at 9 April 2026, lists the 2018 convention-centre grant, the 2020 consultations protocol and lines of credit for solar electrification, power and water infrastructure, and records the digital-cooperation memorandum on tele-education and tele-medicine as still unsigned. No India-Niger agreement or investment commitment is recorded as signed since the 2023 change of government.	ADVANCED
Nigeria	A \$1 billion steel-sector memorandum was signed in April 2026, after a defence-industrial bilateral meeting. A \$1 billion steel-sector memorandum was signed at Kolkata on 14 April 2026, the first dated commercial commitment the base holds since the 2024 state visit. It followed a defence-industrial bilateral meeting in New Delhi on 12 August 2025 advancing cooperation on equipment and joint research. The digital thread is still the older one: the 2024 joint statement names cyber security, fintech and space, records a memorandum between the two computer emergency response teams and carries an offer to share open-source health digital infrastructure. Neither memorandum's text is held.	ADVANCED
Rwanda	An Indian-origin technology investment named the country as a future edge site in December 2024, on sponsored content carrying the company's own projection. The naming is in sponsored content and is the company's own projection rather than a commitment (projection). It is the only holding the base has for this subject, and no site, date, capacity or investment figure attaches to it.	NO CHANGE
Sao Tome and Principe	A consolidated country brief lists agreements from 2009 to 2018 and names an Indian vendor's work on the national digital identity and citizen portal. The brief records a protocol for foreign office consultations signed in December 2009, an agreement for economic cooperation and a memorandum on traditional medicines signed in March 2018, a framework agreement on space cooperation signed in September 2018, signature and ratification of the solar alliance framework, a 50kW solar installation at the prime minister's office, six school buses gifted in April 2025 and five occasions of humanitarian medical assistance (brief). It also records an Indian firm's open-source-based national digital identity and citizen portal work, funded by the lender and a digital public infrastructure centre (brief) - the same integrator a lender mission names on the identity build (mission). The in-window activity is a workshop marking the tenth Ayurveda day in September 2025 under the 2018 memorandum (workshop).	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Senegal	India's own bilateral brief names sixteen lines of credit and a training centre but no instrument dedicated to digital public infrastructure. The brief, current as at April 2026, records a joint commission agreement signed in 1997, sixteen lines of credit totalling USD 350m across sectors that include information-technology training and equipment, buyer's credit of about USD 305m, and an entrepreneurial training centre at Dakar set up under Indian grant in 2002 that has trained around 6,000 students, upgraded in two phases to December 2023. The one in-window contact it names is a ministerial one: Senegal's digital minister took part in an artificial-intelligence seminar in New Delhi in February 2026. The brief names no India-Senegal instrument dedicated to digital public infrastructure, a payments stack or e-governance, so the relationship carries technology through training and credit rather than through a digital agreement.	NO CHANGE a long-standing relationship with no digital instrument on record
Seychelles	Nine instruments were signed in June 2026, including a payments memorandum with the central bank and a INR 1,250 crore credit line. India's bilateral brief of August 2024 inventories agreements back to 1981, including a 2010 information-technology centre memorandum and a 2018 cybersecurity memorandum (brief). The February 2026 state visit produced a joint vision committing India to comprehensive work on the build-out of Seychelles' digital public infrastructure including digital payments (vision), a Digital Transformation memorandum between the two ICT ministries (memorandum) and a USD 175 million special economic package (package). June 2026 added nine instruments, among them a payments memorandum with the central bank and an umbrella line of credit of INR 1,250 crore (signing).	ADVANCED
Sierra Leone	A standing relationship of training slots and tele-education, above which officials joined a learning mission on digital public infrastructure. India's own bilateral brief records a tele-education and telemedicine centre inaugurated in July 2021 under a 2019 memorandum, an ITEC allocation raised from 50 to 86 training slots in 2024-25, scholarships expanded from 15 to 50, and digital infrastructure among the standing bilateral tracks alongside lines of credit that include US\$32 million for a university of science and technology at Koidu (brief). A further line of credit financed potable water works, tendered in January 2026 (tender). Senior officials joined a south-south learning mission to India on digital public infrastructure, hosted by UNDP, with Karnataka receiving the delegation on 1 September 2026 (mission). Training and exposure, with no digital agreement, financing or technology transfer named on either side.	ADVANCED
Somalia	Cooperation runs through a tele-education and tele-health network joined in 2010; no current digital-infrastructure instrument is held. The bilateral brief records diplomatic relations since 1960, bilateral trade of USD 800.86 million in 2024-25, and development cooperation running through a continental e-network that Somalia joined in August 2010, with its tele-education and tele-health successor programme (brief). It also records a 2018 training arrangement between the two foreign services. Nothing dated inside the window adds to this. The relationship is real and its digital component is fifteen years old.	NO CHANGE
South Africa	Indian industry committed to expanding investment including in technology during the deputy president's visit, and a province studied India's procurement marketplace. 2026-06-02 — Indian industry committed to expanding investment in South Africa including in information and communications technology during the deputy president's visit, with engagements involving the Indian technology industry association and a trade and technology council. These are commitments by industry rather than by government, with no value or instrument published, against a 2016 joint statement as the standing bilateral frame. 2026-04-15 — a provincial treasury engaged the Government of India on its government electronic marketplace, drawing on Indian digital public-procurement experience to inform provincial reform. It is knowledge exchange rather than a binding instrument, and it is the only case on this ledger of a province conducting its own digital diplomacy.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
South Sudan	The first Foreign Office Consultations were held in December 2025, six years after the memorandum providing for them. India's bilateral brief consolidates the 2019 consultations memorandum, a December 2025 framework agreement, the first consultations round and a research association concluded in April 2026 between a Juba institute and an Indian research body (brief). The consultations were held in Juba on 4 December 2025, reviewing capacity building, health, technical and vocational training, trade and people-to-people relations, with a second round agreed for New Delhi (consultations), and a technical and vocational education partnership was launched with UNESCO and the education ministry on 31 October 2025 (partnership). Capacity building and training throughout. No digital agreement, financing or technology transfer is named on either side.	ADVANCED
Togo	The one India-Togo digital engagement found is a ministerial panel appearance in February 2026, with nothing signed. India's own press release records Togo's digital transformation minister on a high-level panel at the summit, setting out Togo's artificial-intelligence priorities, its use of artificial intelligence over satellite imagery and telecom metadata for aid targeting, and an in-house data science team established in the ministry. It is a ministerial engagement, not a signed instrument: no memorandum, financing or programme between the two states appears in the base. The substance the minister described is documented elsewhere in this ledger — the targeting model and the government data laboratory — and rests on Togolese and multilateral rather than Indian arrangements.	NO CHANGE
Tunisia	Two draft memoranda and a joint working team were agreed on health cooperation in May 2026; nothing is signed. The communication technologies minister and the Indian ambassador met in January 2026 on capacity building, expertise exchange, Tunisian participation in India's global artificial-intelligence summit and joint digital-transformation projects. In May 2026 the health minister and the same ambassador agreed to form a joint working team and draft two memoranda, on medical tourism and on drug manufacturing, with expert exchange on digital health and telemedicine, and Tunisia invited India to a telehealth event. The gap this settles was open because no bilateral memorandum, line of credit or programme document naming Tunisia was held. Two drafts and a working team are still not a signed instrument, and none of it carries a value or a date.	ADVANCED
Uganda	The 2018 joint statement carries four memoranda, lines of credit and a commitment to ICT collaboration; no digital project under it is on record eight years on. The founding modern instrument is the joint statement issued on the Indian prime minister's state visit of 24 to 25 July 2018, the first in twenty-one years, carrying four memoranda alongside lines of credit and grants. Its technology content is a commitment rather than a project: a joint undertaking to collaborate in information and communications technology, and Uganda's stated intent to replicate Indian digital inclusion schemes while implementing its own public key infrastructure project. No dollar figure is attached to that strand. Nothing in this base records a digital project, procurement or system delivered under the statement in the eight years since. That is now a dated and cited absence rather than an unexamined one, and it is the position at both ends of this window.	NO CHANGE a 2018 instrument with nothing delivered against its technology strand since
Zambia	A comprehensive official bilateral brief lists memoranda and credit lines since 1964, with a mutual legal assistance treaty in negotiation. 2025-08-22 — a framework agreement was signed for a pharmaceutical manufacturing joint venture, 51 to 49 per cent with the Zambian side. 2025-11-14 — the prosecution authority and the Indian high commission held talks to finalise a mutual legal assistance treaty — a commitment being negotiated rather than concluded, and the one with the clearest data dimension, since mutual legal assistance is how evidence crosses a border. 2026-04 — India's foreign ministry published a comprehensive bilateral brief listing memoranda, lines of credit, trade and investment since 1964. It is the most complete external account of the relationship the base holds and it is the counterparty's own.	ADVANCED

COUNTRY	DEVELOPMENTS	PROGRESS
Zimbabwe	India and Zimbabwe reaffirmed reciprocal support for each other's Security Council bids in January 2026; no digital or data instrument is named between them. India has pledged to support Zimbabwe's bid for a non-permanent Security Council seat for the 2027-2028 term and Zimbabwe to back India's candidature for 2028-2029, reaffirmed at the Indian embassy's national day in Harare on 26 January 2026 and framed by both foreign ministries as south-south cooperation (reaffirmation). India's own bilateral brief records a defence cooperation memorandum signed during a Zimbabwean ministerial visit to Aero India 2025, alongside a joint commission agreement of 1987 and an air services agreement of 2014 (brief). Zimbabwe's foreign minister also named the International Solar Alliance and a readiness to expand collaboration in green energy and skills development (national day). No instrument on digital transformation, information technology or data is named in either account. 2026-06-25 - standing bilateral machinery appeared and it is not digital: an inaugural Joint Coordination Committee on mining and mineral resources met on 25 June 2026, carrying no digital component on the record. It is the first bilateral committee the base holds, which makes the absence of a digital counterpart to it the finding.	ADVANCED on diplomatic support rather than on any digital instrument

ABOUT THIS DOCUMENT
