

MONTHLY UPDATE

Other GovTech and e-Gov: monthly update, July 2026

Edition of 2026-08-19 · compiled from the Data Landscapers source base

46 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.

Algeria

The apostille platform went live on [9 July](#), following Algeria's accession to the Hague Convention on 25 August 2025, with recognition claimed in about 126 states. It was planned at accession and implemented at launch.

The national single window gained a free helpline, 3017, from [29 July](#), open seven days a week. The same account puts the portal at 21 live services in 2026-07 against targets of 62 by end-2027 and 350 by 2028.

A second national portal was announced on 24 July: the Ministry of Labour, Employment and Social Security will consolidate its attached bodies behind one electronic portal, reporting [235 services delivered online in 2026-07](#) and 97% document digitisation in 2026-04, and targeting 50% more online procedures by December 2026. No interoperability with the national portal is stated.

The services-import platform announced on 27 July becomes the exclusive route from 1 August. Nothing held confirms it in operation.

August added two more, and one admission. The trade ministry's [complaints platform for economic operators went live on 11 August](#), for remote filing and tracking of concerns about import and export procedures, and the ministry describes it as the fifth platform it has put into service this year. The Ombudsman institution will [pilot a videoconference citizen-reception service from September 2026](#), to ease access for citizens in remote areas and people with specific needs. Against that, on 10 August the interior minister [ordered his own ministry to accelerate digitisation projects he described as stalled](#), naming vehicle-registration and civil-status services, at a review held under presidential instructions to speed cross-sector interconnection. He does not say in what respect they have stalled, and gives no completion figure or revised timetable.

Benin

The [justice sector's 2026–2033 plan](#) commits to a case-tracking portal, secure hosting of judicial instruments and digitally integrated legal aid. It names no budget, no sequencing and no implementing agency.

Botswana

The government payroll portal was [taken offline on 22 July, with a privacy notice, an impact assessment, multi-factor authentication and disaster recovery added](#) and no reopening date stated.

Burkina Faso

Automated traffic enforcement entered operation at midnight on 1 August after an April pilot, reading plates against the vehicle database, serving fines by message with a link to the national payments rail, and immobilising vehicles for non-payment within a month. It [logged 1,099 offences between midnight and noon that day](#) and five payments. Neither held account reports a legal basis, retention rule or data-protection authorisation; [the justification given is 15,614 road accidents in 2025](#). A pension formalities portal also launched on 21 July, presented as improving data exchange between three administrations rather than as a web front end. The Council of Ministers of 23 July separately converted the trade single window's operator into a state company.

The health ministry's accreditation portal, launched on 7 August, arrived with the one thing most of these launches lack — a use figure. It had taken [more than 247 applications since a soft launch in April 2026, of which 39 were validated](#) by the day of the official launch. The counts are the ministry's own, and the record does not explain the gap between the two.

Burundi

The civil-service ministry [put a set of digitisation claims on the record on 31 July and published the constraints against them](#), which is the more useful half. The programme covers performance evaluation of public agents, a job-classification scheme, an annual costed work plan used across public institutions, progressive interconnection of administrative services, and one-stop service desks. The ministry itself names archive management as still largely manual, service digitisation as unfinished and working tools as insufficient. Citizens interviewed framed digitisation as a distance problem: fewer journeys for people living far from administrative centres.

Central African Republic

Modernisation works opened at the central treasury accounting agency on 27 July for an [application deployed for the treasury single account, tied to regional banking rules and integrated with the regional settlement rails](#). Its stated object is centralising state balances and eliminating parallel and opaque accounts. No cost, financier, vendor, timetable or number of accounts closed is stated, and the architecture is explicitly regional rather than national — the public finances plan of June 2025 named six systems and a data centre and no treasury single account application.

Chad

The 2027 budget orientations carry three govtech commitments and one system already running. From 2027 the [electronic visa is to be the exclusive channel for application, payment, processing and issue, and business creation fully online end to end](#) — exclusivity stated with no fallback channel, and the base holding no statement on whether an electronic visa operates today. The same text extends the integrated public financial management system, already

the mandated expenditure environment, to all institutions, local authorities, public establishments, projects and diplomatic missions, with no coverage figure or count of entities live. Separately a [freight bureau enrolment platform went live for Chadian hauliers working in Cameroon](#), presented at Douala, with no services list, deadline, fee schedule or enrolment target stated.

The platform the state already uses to watch itself surfaced on 7 August, when the Prime Minister [received the two-year delivery report on the president's twelve-project programme, tracked through Guidam, the government's sovereign digital data platform](#), ahead of a cabinet seminar to align implementation reporting. Neither the report nor any description of the platform's custodian, supplier, hosting or public accessibility is held.

Congo

Compulsory electronic invoicing took effect on 1 July for [every economic agent except the state, local authorities on public-service missions and diplomatic bodies](#), three months after its enabling decree, with no phase-in by firm size and no assisted or offline route stated on the accounts held. On the same date a [user guide for the tax filing portal fixed filing regimes, delegation and irreversible submission](#): one delegate at a time, the legal representative's own rights removed for the duration, and no correction route once a return is sent. The same roadmap [commits civil status, passport, criminal record and company creation as digitised priority services within two years](#).

Cote d'Ivoire

All 39 first-instance tribunals were [connected to the justice platform on 29 June 2026](#), completing an arc that began with a two-court pilot in January 2025; nationality certificates and criminal-record extracts are now issued digitally nationwide. The account describes this as completing phase one, with no phase-two scope or date. The regulator's compliance platform [went live on 2 July 2026](#), slipping from a 25 June date, replacing about a hundred physical files a month with online submission, real-time tracking and traceability for conformity, processing authorisations and video-surveillance authorisations. It was built over two years and piloted by the identification office and the treasury.

August turned to the supply side and to the state's own paperwork. The ministry [launched Ivoire GovTech Lab on 29 July, publishing government digitalisation projects for direct bidding by start-ups and small firms](#), opened applications for two 30-company support programmes, and set out a 2026-2028 roadmap naming artificial-intelligence adoption among seven strategic pillars; no project list, budget or award record for the lab is published. Separately the electronic-signature programme run by the public service ministry, which already covers the civil service, the tax administration and the construction and mining ministries, [reached the commerce ministry, whose leadership began enrolling on 12 August](#). No certificate authority, standard, enrolment total or statement of legal effect is held for it.

Djibouti

On 2 August 2026 the Secrétariat général du Gouvernement and UNDP [signed a letter of accord to digitise the SGG's paper archives](#) — indexing, scanning, capacity building for national teams, and secure backup at the ANSIE data centre. [It follows a state-funded programme running since 2023 which the parties report has transferred several thousand archive boxes to the National Archives and produced over 200,000 secured digital files for the](#)

Presidency. From September 2026 it extends to the audit and integrity institutions — the *Chambre des Comptes*, the two financial inspectorates, the anti-corruption commission, the public accounts directorate and the human-rights commission. The accord's text, value and duration are not stated.

Egypt

Two further services opened: the Public Prosecution began returning, through the national digital identity system, criminal judgments registered against an enquirer's own national number, and digital visa-on-arrival began at Cairo International on 1 August, with an issuance fee charged on top of the visa fee.

The judiciary signed for a platform of its own. On 11 August the justice minister and the heads of every judicial body signed a *Unified Digital Justice Strategy and launched a shared judicial-data platform*, built with a foreign vendor and set out in three phases covering remote litigation, cybersecurity and artificial-intelligence-enabled services. No text, timetable, budget or data-protection arrangement is published, and the vendor's contract value and procurement route are not stated. The President returned to the same programme on 17 August, *directing that digital-sovereignty and cybersecurity standards be maintained for litigant data at a review of the City of Justice digital-court project*, alongside justice ministry e-notarisation partnerships with two state banks. A direction is not a standard: none is named, and none is published.

The *unified government services card, integrating food-subsidy and civil-service delivery into one platform*, was reviewed by the supply and communications ministers the day before, on database sharing and technical integration. The state's own complaints channel gave its monthly figures: *about 229,000 complaints, requests and inquiries handled in July, 84% referred on to the responsible authority and 14% closed*, with governorates taking 17% of referrals and nine of them handling 74% of that share. Referral is not resolution, and no outcome or resolution time is published behind it.

Investors are to get their own digitised path through the land record. A *cooperation protocol signed on 13 August between the justice and investment ministries would digitise real-estate registration and notarisation services for investors*, to shorten company incorporation. No protocol text, timetable or service list is published, and land-registration coverage for everyone else remains *Not held*.

Equatorial Guinea

The Comité Nacional de la Cuenta Única del Tesoro, chaired by the prime minister, *approved a work programme and institutional roadmap* at the Presidency on 5 August 2026. The general census of all state bank accounts is complete; the new financial-management model will be built on AMS/X and SINTAG, both already used by the BEAC, interconnected with the Treasury's public-finance systems; and implementation runs in five phases with entry into production in the first quarter of 2027. No cost, implementing agency or supplier is stated.

A GITGE study of the ministries, *reported on 2 July*, put interoperability at about 15%, big data at about 21% and data analysis at about 10%. Against that measure, the *Public Administration Institute's launch of its first institutional website on 10 August* — carrying its training offer, calls for applications and publications — is a small step and a fair measure of the starting point.

Eswatini

The state's auditor put artificial intelligence at the centre of its own next four years. The Auditor-General [launched a strategic plan for 2026 to 2030 naming artificial intelligence and digital transformation as the route to stronger public-sector accountability, urging more than 80 audit officers to adopt them](#), developed with the INTOSAI Development Initiative and the African organisation of English-speaking supreme audit institutions. The plan text is not held, and no tool, data access, assurance standard or safeguard for audit use of artificial intelligence is stated — in a country whose national artificial-intelligence strategy is recorded as *Not held*.

Ethiopia

The unified public-service platform launched with [185 services against 41 across twelve federal agencies a year earlier](#), anchored on the national identity credential. An account of 13 August puts the platform at [more than 2,200 services](#), on the occasion of a Beninese benchmarking visit; the base cannot reconcile that with the launch count two months earlier and the two may rest on different counting bases. Its own regional executives say [services are being onboarded before the systems beneath them are digitised](#), that two incompatible integration models have emerged, that no legal framework compels an institution to digitise before joining, and that the platform ran close to a year with no dedicated regulatory framework. Separately the Auditor General's annual report, presented on 6 July, [credits electronic procurement with the decline in cash shortages across 163 audited federal institutions](#) while finding budget-execution gaps, billions of Birr uncollected and repeated financial-rule violations alongside the digital adoption. No Birr amount is attached to the credit, and the report itself is not held.

Gabon

On 2 August the border agency's tourist electronic visa platform, developed in 2025, was presented to the travel trade ([account](#)). A second platform was shown rather than launched: administration.ga was [presented to the Vice-President as an integrated suite for secure messaging, meeting management and the exchange of confidential documents between civil servants, built with a Gabonese start-up, with the state holding the source code at no cost](#). No contract, cost, timetable or hosting arrangement is stated.

Gambia

The revenue authority said on [30 July 2026 that South African and Rwandan customs officials will study its digital excise tax stamp](#), after officials from Nigeria, Senegal and Sierra Leone; the commissioner general attached to it [a claimed 95% reduction in smuggling of excisable goods](#), a figure with no method, made by the authority whose system is being studied. The finance ministry also [named a planned Integrated Tax Administration System](#), with no procurement, vendor or timetable.

The trade ministry said on [4 August 2026 that a Digital Single Window Business Registration System is being finalised](#), with no launch date.

The electoral commission's digitalisation produced its first published contest figure. At a stakeholders' forum on 7 August the chief electoral officer disclosed [1,600 objections filed against the 2026 supplementary voter roll](#), on eligibility and residency, now before Revising Court Magistrates ahead of the provisional register being merged with the 2021 Voter Register. No denominator of supplementary registrations, no outcome of the hearings and no merged register total is held.

Ghana

The finance ministry reported to Parliament that the customs valuation system had [analysed about 366,000 declarations to 17 July](#), 24% triggering more than one risk indicator, with collections up 17.5% against a 6.3% rise in declared value. A second public sector reform strategy was validated on 30 July on seven pillars, 27 programmes and 135 activities.

The revenue side gained a plan on 12 August. A [Korean-backed Tax Modernisation Master Plan covering income tax, value-added tax, tax administration and electronic tax administration was set out](#), with artificial intelligence already in service on customs valuation. No cost, timetable or implementation schedule accompanies it, which puts it a stage behind the customs system it is presented alongside.

Guinea

The treasury [began rolling out CÉil du Trésor](#), a platform for prefectural treasurers to submit and track fund calls. No cost, vendor or completion date was disclosed.

Two more of the administration's own paper processes went onto systems in August. [GEME, an electronic system for managing state mission orders, was launched on 13 August](#) to control costs and improve accountability; no custodian, coverage, cost baseline or saving target is stated. The next day the President said he would [personally oversee GEDA, the decrees-and-orders management tool](#), to speed administrative processing, tying it to accelerating the Simandou 2040 programme. Personal oversight by the head of state is not an institutional control, and no throughput figure or publication rule is stated for either system.

Kenya

The Controller of Budget's report entered July's reading: [1,695 of a target 11,000 services](#) were migrated onto eCitizen in the year to 31 March 2026, against 3,458 the year before, described as a dismal performance.

The platform sells better abroad than it migrates at home. Its operator [pitched the Democratic Republic of the Congo's digital economy ministry on 12 August on digital company registries, beneficial-ownership traceability and real-time state-revenue tracking](#), citing eCitizen's forty-plus digitised services and existing registry deployments in Malawi and South Sudan; the Congolese minister asked officials to continue talks toward a partnership. The claims are the vendor's own, made in a sales meeting, and the same operating consortium's domestic position remains under challenge.

Lesotho

MICSTI hosted the [first national stakeholder consultative workshop on a National Data Value Creation Blueprint](#) in Maseru on 14–15 July 2026, opened by Principal Secretary Kanono Ramashamole and supported by Smart Africa, the African Union and the German Embassy. A Smart Africa representative is reported saying Lesotho had been selected to participate in the programme alongside Senegal and Kenya; that account of a spokesperson's remarks is the only evidence held for the membership, and no Smart Africa programme document naming Lesotho is on file.

At the CSIRT launch the ministry also stated a plan to move ICT services out of the civil service into a separate agency, for which no enabling instrument or date was given.

Liberia

The e-procurement platform published its first operating figures on 5 August: [more than 1,200 vendors registered and more than US\\$400,000 in revenue generated](#). No contract value transacted, tender count, bidder numbers or share of government procurement passing through the platform is given. Two days later it became an export: Sierra Leone's procurement authority [sent a delegation to Monrovia on 6-7 August to study the implementation](#), where the executive director dated the national launch to February 2025 after a six-institution pilot and credited the African Development Bank and the World Bank with the backing behind it. A later account of the same visit [records the telecommunications regulator receiving equipment to strengthen its own use of the platform](#), framed as deepening bilateral cooperation on digital transformation and procurement transparency.

Licensing moved off paper in the same week. The telecommunications regulator [put an automated telecom licensing and renewal platform into service](#), letting applicants apply and renew online while keeping in-person service available. No licence count, processing time or fee schedule is published.

Libya

On 23 July the Ministry of Labour and Rehabilitation [reported the Libya Experts Forum electronic application ready for launch](#), with the minister instructing that the highest standards of data protection and confidentiality be observed. The instruction names no statute, regulator or standard.

On 30 July the Libyan Export Development Authority reported [LD 79.5 million of exports processed through the electronic Unified Export Window between April and July 2026](#): 354 registered companies, 190 distinct products, more than 20 destinations, and 129 orders to Tunisia — 66% of the total, against 28 to Turkey and eight to South Korea.

On 9 August the economy and trade minister [launched an Exhibitions and Conferences Platform in Tripoli](#), presented as the country's first official specialised system for the sector: electronic management of registration, participation and event logistics, and an integrated database of exhibitions, conferences, organisers, participants and visitors. As with the expert register and the export window, no supplier, cost, hosting arrangement or data-protection basis is stated.

Madagascar

On 28 July the national police [presented a free public reporting platform at Anosy](#), six days after the national day of mourning of 24 July that followed a run of kidnappings and killings. Built by the police's own information-systems directorate, it runs 24 hours a day on web and an Android application in Malagasy and French, taking reports of gender-based violence and of disappearances of children, adults and people with albinism. Reports may be filed anonymously, an automatically generated reference number lets a declarant track the file, and reports are triaged by specialist services before routing. Its scope is [explicitly digital](#): online harassment, non-consensual image sharing, sextortion, online defamation and AI-falsified content are reportable categories in their own right. No data controller, retention rule or supervisory authority is named.

On 3 August the higher-education ministry [presented an accreditation platform](#) centralising applications for authorisation, accreditation and equivalence and letting an institution track its file. It published its queue with it: 546 applications as at 10 July 2026, of which about 250 are expected at the commission session opening on 21 September 2026.

Two further builds are financed rather than delivered. The Maritime Single Window, centralising port administrative procedures, is [being deployed on more than 3.4bn Indonesian rupiah, about 816m ariary, from Indonesia's international development agency](#) through the port, maritime and river agency; no go-live date, port coverage or procedure list is stated. And the social-protection fund is [recruiting a consultancy to build a human-resources management ERP under a World Bank-financed project, bids due 26 August](#), having separately tendered on 7 August for a payroll server under a World Bank contingent emergency response project. Neither tender discloses a value.

Malawi

Passport printing resumed at Mangochi, stated in Parliament on 20 July, where a member said applicants who filed nine months to a year earlier were being overtaken by same-day issuances. The homeland security minister accepted in principle a sequence number assigned at application.

Mali

The same 24 July Council of Ministers session heard the labour ministry report Mali's integrated human resources system to the pan-African public administration forum in Rabat.

On 29 July the Council of Ministers took note of the first published output of the government monitoring system: [43.43% of planned activities completed in the second half of 2025 – 109 of 251, with 83 in progress and 59 not started](#).

Mauritania

The Ministry of Foreign Affairs and the digital ministry [launched a consular-services platform on 9 July 2026](#) with a first phase of nine online services. On 29 July it [went into service for the Riyadh mission's zone of competence](#) – Saudi Arabia, Bahrain and the Maldives – delivering consular registration, the consular card, travel authorisation,

legalisation, attestation of power of attorney, appointment booking and burial and repatriation permits, most without attending the mission. A second platform registers residence and permitted activities country by country and builds a digital register of national skills abroad. The consular registration desk remains the competent authority.

On 4 August the digital ministry [launched the digitisation of SNDE's services and their integration into the Mes Services portal](#), with the water utility's transactions available remotely from that day. German cooperation was thanked by name with no amount, instrument or term stated, and no usage figure exists.

The clearest disclosure of the month came at a [workshop on the tax regime for public bodies on 30 July](#). The Finance Minister announced an electronic invoicing system for public institutions, handling VAT and withholding at source by transferring data automatically to the tax directorate, and put [more than 500 taxpayers on the tax directorate's electronic platform producing 36.45% of directorate revenue in 2026](#). The Director-General of Taxes gave the counter-figures: of 642 legally constituted public bodies only 339 are active with the tax administration, around 20 are absent from the national taxpayer register, and on the electronic tax-services platform 66 public bodies are enrolled, 53 file electronically and 3 pay through it. The compliance guide announced alongside is in preparation, not published.

Khdamati, the remote-transactions platform named as the third phase of the Ijraati roadmap in February and untouched since, moved into integration work in August. On 13 August the ministry [took forward its integration with the Diwan territorial-administration system with the German embassy's charge d'affaires and GIZ's resident director](#), as part of decentralisation and local-development cooperation. Diwan itself is not separately held, and the integration is reported as under discussion rather than delivered.

Separately the state is preparing to [recruit 3,852 education-sector agents through a national competitive examination](#), with ministries coordinating the digital mechanisms planned for the process. No platform is named.

Mauritius

The same omnibus also gives clinical trials a statutory electronic licensing system, with the procedure written into the same Act as the channel.

Morocco

An interior ministry circular reported on 25 July abolished 22 administrative certificates and replaced them with sworn declarations, on the ministry's finding that citizens had routinely been made to produce them with no legal basis, and confirmed that only procedures published on the national portal are legally enforceable ([circular account](#)).

Switzerland's economic secretariat, the World Bank Group and a Swiss innovation body launched a public-audit innovation challenge in Rabat on 22 July with the general finance inspectorate and the court of audit as institutional users; no budget, award size or timetable was announced ([launch account](#)).

The ombudsman's 2025 annual report, presented on 23 July, gives the counterpoint: 9,958 files opened, up more than 25% year on year, 1,653 settlement decisions, and a mean 815 days to implement a recommendation and 774 days to close a file ending in one ([report account](#)). The institution holds that several administrations moved existing steps onto platforms without reworking the underlying process, and attributes repeated demands for the same documents to weak interconnection of administrative databases ([commentary](#)).

Mozambique

The tax authority made the fiscal clearance certificate available online from 3 August with a ten working-day issuance ceiling and a published complaints address ([authority account](#)).

Namibia

Legally recognised electronic signatures have [no launch on record, the February 2026 nationwide target having passed](#), with accreditation of service providers still under way. The capability is now [described instead as a component of the September 2026 identity card](#) — a target absorbed into another target.

Niger

On 15 July the tax directorate [convened a national seminar on digitalising the tax administration](#), its core systems back at full operation after sanctions, with recommendations sought toward a round-the-clock digital tax service.

Nigeria

The [Government Service Portal](#) was soft-launched on 30 July as a single sign-on gateway built with Korean financing, piloted since 2025, [the Korean agency named as a delivery partner alongside the communications ministry](#). Behind the login it integrates with the national data exchange so agencies share citizen data rather than each re-collecting it. The lawful basis and the audit arrangements are unstated, and no published rule answers either.

At state level a second donor took the policy layer rather than the platform: on 16 August [the UK opened a digital policy and regulatory reform project with Ekiti State](#), to produce a digital-economy strategy, a DPI roadmap, a civic-technology strategy and a connectivity-reform framework. Its value and duration are not published.

Rwanda

The government's services portal was reported on 30 July as carrying [more than 600 services, of which more than 240 are paid, across 4,000 agents](#). The same account records the stack being sold abroad: two neighbours have adopted the electronic billing machine, a third is mid-adoption, and one state has taken the electronic procurement platform and is co-developing it. No revenue or contract value is disclosed for any adoption.

On 20 July an information society authority and a West African digital ministry identified artificial intelligence, electronic health and electronic commerce as areas to explore around that procurement platform — areas identified, nothing signed.

Senegal

The month's clearest movement is a removal rather than an addition. The tax authority [withdrew the paper fiscal stamp on 20 July, making the digital service the sole recognised channel nationwide](#), with QR-coded stamps bought and received remotely. Unused paper stamps were exchangeable until 15 August and no offline or assisted route is stated. Eight days later the [free electronic stamp service was suspended by its provider, citing an administrative decision outside its control, with refunds promised within 72 hours and users stating they now pay additional fees for an identical service](#) — the first consumer-cost consequence of state-platform exclusivity the base holds, and it is not stated whether the decision was addressed to that provider or to the distribution channel generally. Separately the state procurement platform is [operating and named by the procurement regulator as intended to capture the procedures of a thousand administrations](#), with its protection a stated priority alongside critical state digital infrastructure; no count of administrations onboarded, procurement volume, availability record or security accreditation is given.

Parliament's own systems entered the record for the first time, and only as a purchase order: on 5 August the United Nations development programme [opened a tender to supply IT equipment for the National Assembly's SIPOP system](#). What that system does, what it costs and when it runs are all absent from the notice, which is the whole of what the base holds on it.

Seychelles

Vice-President Ahmed Afif [announced an eight-week automated traffic-enforcement pilot for Roche Caiman, Mahe, on 30 July](#), repurposing the public CCTV estate with the Australian firm Acusensus; no data-protection basis for the processing was stated. Permanent adoption depends on the pilot's outcome.

Sierra Leone

The National Public Procurement Authority [sent a delegation to Liberia on 6-7 August to study that country's electronic government procurement system](#). No Sierra Leonean platform, procurement decision or timetable follows from it on the record. The visit was reported on 12 August as [a deepening of bilateral cooperation between the two countries' regulators and procurement authorities on digital transformation and procurement transparency](#), which restates the same event rather than adding a commitment.

Two systems the state watches itself with did move. The audit service's [management information system entered final user-acceptance testing after post-configuration training on 3 to 5 August](#), built with World Bank funding by customising a platform of the African organisation of English-speaking supreme audit institutions, before it is declared operational. And the monitoring and evaluation agency is [expanding its information system for real-time remote tracking of the 100 to 250 public projects launched each year](#). Neither account states a cost, a go-live date, or whether any of the tracked data reaches the public.

Somalia

A national single window is named as planned within a regional trade project, alongside a trade information portal and the existing customs and livestock traceability systems it is to connect to. It is stated in an agenda piece by the national trade facilitation coordinator rather than in an instrument, and no design, timetable or budget is published.

South Africa

Operation Vulindlela's quarterly report of 31 July recorded an update under way to the [Minimum Interoperability Standards and the Government-Wide Enterprise Architecture](#), with an update due September 2026.

On 3 August the single citizen application was reported as a [production-ready pilot](#), its first credential use case a digital matric certificate built with Umalusi, with the verification approach in testing.

Two of the state's own systems produced numbers in August, one improving and one lost. Home Affairs cut nationwide system downtime from 35,426 hours in 2024/25 to 13,867 in 2025/26, a 61% reduction, and a parliamentary reply gives the fuller picture: the population register's own downtime fell only from 14,720 to 11,479 hours, a 22% improvement, with the department crediting the state IT agency's move from a bronze to a silver service level, 226 links migrated to fibre, 182 offices moved to a web service manager and 439 offices running on the identification system. The register — the layer everything else depends on — improved least, and the department led with the front-office figure.

The courts project went the other way. On 13 August the justice minister [referred the courts digitisation project to the special investigating unit and the police priority crimes unit, after the contractor holding outsourced records since 2021 denied the department access to its own records at the Master of the High Court in Pretoria](#). No contract value, term, custody arrangement or data-protection provision for those records is held; a department locked out of its own files is a custody failure before it is a procurement one.

South Sudan

On 20 July revised fees were [published on the electronic visa portal](#), putting US\$50 on citizens of Kenya, Uganda, Rwanda and DR Congo and US\$100 on Somali, Burundian and Nigerian citizens.

Sudan

Baladna was adopted as the sole national platform for all foreign-trade transactions on 5 August 2026, with permits issuable from any location, at a finance-ministry-chaired meeting that also resolved to unify state-level border-trade protocols into a single national legal framework. [The Judicial Authority signed a contract with the National Technical Company on 4 August](#) for a judiciary digital-transformation project, financed by the finance ministry and vetted by the justice ministry's contracts department, with no value, duration, system list or delivery timetable disclosed. A second procurement system entered service: [Nazaha, a national digital public-procurement and contracting platform, was launched and stated as aimed at transparency and fair competition in the allocation of government contracts](#) (12 August). No coverage, entity count, procurement value or mandatory-use instrument is published for it.

A third oversight system was announced without a shape. The finance ministry says a [comprehensive electronic oversight system covering public bodies and government companies is forthcoming](#), in the same statement in which it attributes a significant rise in first-half 2026 public revenue to expanding the electronic collection system, rolling out electronic invoicing and tightening customs and tax exemptions, without new taxes. No revenue figure, baseline or attribution method is given for the rise, and no scope, custodian or timetable for the oversight system.

Tanzania

The central bank [launched a sovereign yield curve system on 7 August](#), letting investors compare secondary-market government-security returns against domestic and international alternatives before investing. [Retail participation stands at 32,631 investors against 897 in 2016](#), on the governor's own figures given at the launch.

Upstream of any single system, German cooperation [tendered a consultancy on 5 August to identify and prepare bankable digital public infrastructure projects across Tanzania, Kenya and Uganda](#) — identity, data exchange, payments and e-government — under the European programme with the East African Community. A procurement notice fixes the consultancy and nothing about any project it may produce; neither value nor duration is stated.

Togo

Two government systems advanced without either being shown in production. [Document management and digitisation training ran at the finance ministry](#), with no statement that the system itself is live; and the volunteering agency's [mobile application is live](#) carrying four programmes for registration and record tracking, with no formal launch date and nothing establishing whether it authenticates against a national citizen account or mints a separate identity store.

Tunisia

Two more registers moved. The employment ministry [launched the national register of community companies on 20 July 2026](#), and the launch figures were the disclosure: 230 companies created, 15,000 participants, but only 60 operational and 380 jobs. On [4 August the tax directorate put business tax registration online](#), ending the required visit to a tax office; it was announced by video capsule rather than by gazette, and its confidentiality assurance names no instrument and no supervisory authority.

A restricted ministerial council of 16 August put a count on the rest: [114 projects in execution, some reported above 90% complete](#), covering remote residence certificates, driving-licence renewal, remote passport and identity-card applications, the national health identifier and the customs and health-insurance systems. It is not the same measure as the 192 projects the February council tracked, and the two should not be read as a fall. The council also announced [the imminent launch of a Khadamet mobile application offering more than 40 administrative services, reached through the national digital identity and paid by card or virtual wallet](#). No launch date was given, and the application sits on top of the existing administrative portal of the same name rather than replacing it.

Uganda

Electronic government procurement reached [136 entities onboarded with version 2.0 in service, verifying suppliers automatically against the revenue, registration, identity and social-security registers](#), and training opened for a further 100 entities on 3 August. An onboarded entity no longer advertises tenders in newspapers and may transact only with registered providers. Onboarding is stated to continue each financial year until all of government is on the system.

Two further e-services launched on 12 August under the same government network programme: [a teacher-training platform with more than 6,600 teachers enrolled, and a case-management system for the Human Rights Commission](#). Neither carries a published retention rule or data-protection assessment, which is the sharper omission for a system holding complaint records.

Upstream of any of it, German cooperation [tendered a consultancy on 5 August to identify and prepare bankable digital public infrastructure projects across Uganda, Kenya and Tanzania](#) — identity, data exchange, payments and e-government — under the European programme with the East African Community. It is a procurement notice: it fixes the consultancy and nothing about any project it may produce, and neither its value nor its duration is stated.

Zambia

A contract tracking and management system was launched with the Ministry of Justice on 12 July for digital submission of government contracts to the Attorney General's Chambers and real-time tracking of approval progress; no volume or turnaround figure was published.

Zimbabwe

An implementing partner reported on 28 July that it had been building artificial-intelligence competency among research, committee and budget-office staff in Zimbabwe's Parliament, and that staff were using public tools on personal judgment, with limited monitoring of data flows into those platforms and no consistent approach to identifying fabricated output ([partner account](#)).

The same capacity gap shows in the state's own books. The Auditor-General found that [only 26 local authorities submitted their 2024 financial statements on time, while the revenue authority pushes businesses onto its fiscalisation data management system](#) — a reporting failure inside government that the revenue drive does not address. The denominator of local authorities is not given in the record held, so the share filing on time cannot be stated.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
