

PROGRESS REPORT

Access to services: progress report, 2025-09-01 to 2026-09-06

Edition of 2026-09-06-2 · compiled by Claude Opus from the documents in the Corpus repository

48 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has **No evidence** on it in its own report.

CITIZEN FEEDBACK PORTALS · CITIZEN PARTICIPATION IN POLICY · GENDER EQUITY ·
INCLUSION OF PERSONS WITH DISABILITIES · INCLUSION OF REFUGEES AND IDPS

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

The place reports do not share one window; the period above is the range they span.

Citizen feedback portals

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	A complaints platform for economic operators went live on 11 August 2026, and an ombudsman videoconference reception is to pilot. Full record 2026-08-11 - a platform went live for remote filing and tracking of economic operators' complaints on import and export procedures, without attending ministry offices, described by the trade ministry as the fifth digital platform it put into service in 2026. The minister inspected the platform offices on 15 August and ordered faster, continuously monitored processing; no processing time, backlog figure, complaint count or service standard is published, so the instruction to go faster is not measured against anything. 2026-08-09 - the ombudsman announced a videoconference citizen-reception service to pilot from September 2026, to ease access for citizens in remote areas and people with specific needs, with no site list, capacity, appointment rule or evaluation attached.	Advanced
Botswana	Botswana Speaks carries citizen messages to members of Parliament by web and phone, free of charge. Full record 2026-01 — the platform lets citizens communicate with their members of Parliament on constituency and national issues, including Bills, free and through web and mobile. 2025-08-21 — the forensic audit public engagement platform, launched in August 2025, published its contact channels for public submissions. 2026-02-10 — 52 public services are fully available online with a further 179 in integration testing. No submission or response figure is published for either platform.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Burundi	A harmonised national complaints strategy was validated during 2025 and digital reporting platforms for gender-based violence were presented in April 2026. Full record The regulator's free short code and physical suggestion boxes in operator agencies are the standing official feedback channel, and they are sectoral: telecoms consumers rather than a cross-government grievance route. 2026-02 — a harmonised national complaints-management strategy was drawn up and validated during 2025, alongside the ombudsman's 2025 caseload of 776 files analysed and treated. 2026-04-09 — a citizen-facing digital alert and case-management system for gender-based violence was presented, with an interventions-management system for the institutions involved. It is the first citizen-facing reporting platform the base holds for Burundi, and it is one subject: no general-purpose portal exists.	Advanced
Cape Verde	The earmark rose to CVE 74,050,000 for FY2026 across two sub-lines only, the citizen-space and one-stop-shop lines having disappeared. Full record The one-stop shop operated on an earmarked own-service-fee receipt of CVE 74,817,675 at the FY2024 proposed stage and was CVE 59,437,242 for FY2025 across four sub-lines including a citizen-space community line and a one-stop-shop implementation line. For FY2026 it is CVE 74,050,000 across two sub-lines only, service quality and new technological infrastructure: the total rose while the two lines naming physical and one-stop-shop access disappeared. It is still named as a component of the state-modernisation programme, and no service-volume figure is held from any date.	Mixed, the one-stop-shop earmark rose for FY2026 while the two sub-lines naming physical and one-stop-shop access were dropped
Central African Republic	A unified digital portal was launched in December 2025; the only feedback channel with a count behind it is an agency's. Full record 2025-12 - a unified digital portal was launched as a single point of access to government. No service count, transaction volume or feedback function is described for it. The only channel on this ledger with a figure behind it is not the state's: a refugee operation's complaints and feedback system recording 535 complaints. No government complaint channel, response-time commitment or resolution figure appears anywhere, so what a citizen can do with a grievance is not established.	Advanced
Comoros	A justice ministry contact form takes complaints; two programme grievance mechanisms are being stood up. Full record No government-wide feedback channel exists. What the base holds is one ministry's form and two programmes' mechanisms. The justice ministry's live contact form lets a citizen select a complaint as the object of a request, alongside administrative information, case follow-up and document access; no response time or case count is stated. 2026-03 - a national consultation of about sixty participants worked to operationalise a grievance redress mechanism under a food systems programme, with in-person, digital and formal channels and escalation to regional structures. 2026-03 - a water and sanitation programme plans a public feedback and grievance channel with a target of settling complaints within seventy-two hours, planned rather than delivered.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Cote d'Ivoire	A consumer grievance platform launched in July 2026 at FCFA 150 per report, and a telecoms complaints procedure was validated. Full record 2026-07-30 - a consumer association launched an application and web platform at FCFA 150 per report, with eight stages from filing through mediation to published reports and sectoral dashboards. A consumer association rather than a regulator now holds the national grievance dataset, and charges for entry to it. 2026-08-13 to 14 - a procedure for handling consumer complaints on electronic communications was validated and sent to the regulator's council for adoption. A financial-service rating pilot recorded 2,234 evaluations to 31 March 2026, 60% satisfactory and 40% unsatisfactory, with rollout stated for May 2026; nothing establishes that rollout happened.	Advanced, the national grievance dataset now sits with a consumer association that charges for entry
Djibouti	A complaint-management portal is in service at the urban rehabilitation agency; its scope is that agency alone. Full record Nothing of the kind was on record when the period opened. The urban rehabilitation agency now operates a complaint-management portal that routes recovery and technical problems to named internal divisions. That is one agency, not a government channel. No whole-of-government feedback mechanism, service-standard commitment or response-time figure is published, and no complaint volume for the portal itself appears on file. The electronic official journal is the other public-facing service on record, and it publishes rather than receives.	Advanced
DR Congo	The regulator set a binding complaint escalation path by communique of 22 July 2026: 30 working days with the operator, then referral. Full record 2026-07-22 - a communique signed by the regulator's president set a binding escalation path: complain to the operator first and allow a maximum of 30 working days, then refer to the regulator by a free line, an online form or physical filing, with a reasoned opinion undertaken within 30 days. The communique itself is not held; the regulator's site is script-rendered and exposes no document path. No complaint volume, opinion or enforcement outcome has been published since, and the tariff changes subscribers report in the east went unannounced without any complaint under the new path reaching the record.	Advanced
Egypt	The complaints system handled about 229,000 cases in July 2026, while 2,600 appeals followed about 850,000 ration-card deletions. Full record 2026-07 - the system handled about 229,000 complaints, requests and inquiries, 84% referred to the responsible authority, 14% closed and the rest under review, with governorates taking 17% of referrals and nine of them handling 74% of that share. Referral is not resolution: no outcome, resolution time or satisfaction measure sits behind the referred share. Against that, about 850,000 ration cards were deleted under criteria strictly enforced from June 2026, with 2,600 appeals filed, about 0.3%, the ministry attributing the low rate to document hurdles - applicants must obtain proof from other agencies before an appeal can be assessed, and name collisions and stale entries require correction at the agency holding the original record. 2026-07 - data-update forms began to be accepted at 500 post offices on Friday afternoons and Saturday mornings alongside the online route, with a daily adjudication committee and results notified by text - an explicit concession that channel-exclusive digitisation excluded people.	Mixed, the unified complaints system handled about 229,000 cases in a single month while ration-card appeals ran at 0.3% of deletions and had to be reopened at post offices

COUNTRY	DEVELOPMENTS	PROGRESS
Equatorial Guinea	No complaints channel exists; redress came by Vice-Presidential intervention in the one recorded case. Full record The state's citizen-facing digital layer is an administrative procedure tracker and the document services around it. Nothing in the base offers a route to complain. The one recorded remedy came from the top: the Vice-President found an unauthorised fee scheme and ordered a bank to repay 182m CFA to 12,000 customers in April 2026.	No change
Eritrea	The state telecommunications provider runs a web complaint form for internet faults; no whole-of-government channel exists (complaint hub). Full record The sole state telecommunications provider operates a live web form for internet-connectivity, website-access and web-application problems, with telephone and email alternatives (complaint hub). It is the clearest operational digital feedback channel located, and it is narrowly sector-specific. Nothing on the base records a government complaint portal, a service-standards charter or a published response record, and there is no freedom of information law under which an unanswered complaint could be pursued (review contribution). The base holds no volume of complaints made or resolved.	No change, a first statement of the position and the channel is one operator's, not government's
Eswatini	One public entity launched a feedback platform in June 2026; the only government-wide channel is a grievance mechanism committed in a draft project plan. Full record The housing board introduced a net promoter score platform taking feedback across its offices, digital channels and services (platform). It is one entity's own channel. The Digital Eswatini project's stakeholder engagement plan commits to a multi-channel grievance redress mechanism including an online portal (plan); the plan is a draft and carries no portal address, complaint count or response standard. The regulator adjudicates statutory complaints in the communications sector, which is a sectoral route rather than a service-delivery one. 31 of 419 government services are online. A feedback portal for a service that is not online has nothing to be a portal to.	Advanced
Ethiopia	A secure corruption reporting and case-tracking channel launched across the state holding company's portfolio (Adera). Full record Adera launched in January 2026 as a secure corruption reporting and case-tracking channel for the public and for employees across Ethiopian Investment Holdings' portfolio companies, with anonymity and report tracking (Adera). The unified public service application was inaugurated in June 2026, described by the Prime Minister as bringing services from across institutions onto one platform, saving citizens' time and closing corruption gaps (inauguration). Both are channels into the state rather than published feedback: the base holds no complaint volumes, response times or resolution rates for either, so whether they function as feedback loops is not evidenced.	Advanced
Gambia	The 148 line is sectoral; draft complaints regulations opened for comment in April 2026. Full record The toll-free line and its escalation flow handle utility complaints and are not a consolidated national feedback platform. Nothing else in the base offers citizens a route into government services. The draft complaints, investigations and consumer protection regulations were out for comment from 1 to 10 April 2026 and are not in force. The fact-check centre's public audit trail is the only other published feedback channel.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Ghana	The central services portal carries a live feedback function and a sectoral complaints portal launched in March 2026. Full record 2026-05-30 - a ministerial statement establishes that the central digital-services portal is operational with a live feedback function and is being redesigned under the financed acceleration project into a citizen-centred one-stop shop, the redesign still at planning and stakeholder alignment. 2026-03-16 - the civil aviation authority launched a self-service digital feedback channel for air passengers, reachable from its website and from codes at airport terminals, with automated acknowledgement by email and text, replacing manual complaint channels. Neither publishes a complaint volume, a response time or a resolution rate, so what these channels receive and what happens to it is not on the record.	Advanced
Guinea	A civil-service housing registration platform opened in August 2026, its communiqué warning that payments made outside it engage no government responsibility. Full record The ministry directed officials to use the official platform alone to complete an interest survey and to read the eligibility conditions, warning that no registration, fee or intervention made outside the announced arrangement engages the government's responsibility (communiqué). The warning is the notable part: it names the fraud the platform is meant to displace. A national vehicle-attestation platform was contracted to two foreign suppliers in August 2025 with no service date published (vehicle platform).	Advanced
Guinea-Bissau	A youth feedback platform launched on text message and messaging apps in October 2025. Full record The platform launched on 1 October 2025 with an international agency and a mobile operator is the base's only citizen feedback channel for Guinea-Bissau, and it is youth-specific. A second was piloted rather than launched: a civic input application in late 2025. No response or resolution figure is published for either.	Advanced
Kenya	Escalated consumer complaints to the regulator rose to 670 in the quarter to June 2026 from 362 two quarters earlier. Full record They were 563 in the prior quarter, with 548 or 82 per cent resolved (returns); data services drew 195 complaints against 44 for voice, data billing and charges was the largest single category at 75, and the regulator separately logged 19 data-breach complaints (returns). These are escalated complaints only and no comparable series before October 2025 is held, so the rise measures escalation rather than dissatisfaction. On the other side of the counter, a diaspora portal went live on the national platform for registration, missing-person and death reporting, crisis mapping and a 24-hour response centre, with no user or transaction figure held (diaspora portal).	Regressed
Lesotho	The crime-reporting app launched as a zero-rated feedback channel, alongside the standing contact centre. Full record 2022-05-17 — the National Contact Centre opened as the citizen feedback mechanism. 2025-10-24 — the Ombudsman opened procurement for an electronic case management system to replace manual complaint recording. 2026-04-20 — the crime and violence reporting app launched nationally as a zero-rated channel. None of the three publishes a volume, response time or resolution figure.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Liberia	A youth feedback platform was relaunched in August 2026 on an encrypted messaging channel, targeting at least 8,000 reporters. Full record It is run by two United Nations agencies with an embassy's support under a joint programme with government, letting young people answer polls on health, water and sanitation and other social issues with responses analysable by county (relaunch). The channel is tied to a single mobile operator's cards, which bounds who can take part, and no baseline participation figure or publication rule for the results is stated.	Advanced
Libya	The Raqib platform takes complaints and violation reports against about 750 state bodies. Full record The oversight authority launched the platform at a Tripoli anti-corruption event in December 2025. It is live and its scope is stated: complaints and violation reports against about 750 reportable state bodies. No count of reports received or resolved is published, so its use cannot be measured from the record.	Advanced
Madagascar	The anti-corruption bureau's anonymous reporting platform carried 242 reports in 2024, the only feedback channel held. Full record The bureau's annual report records 242 reports received through its anonymous digital whistleblowing platform in 2024, alongside a named administrative-procedure digitalisation programme (report). The national police launched a reporting and case-tracking platform for gender-based violence and missing persons in July 2026 (platform). Both are reporting channels for specific harms. No general citizen feedback or grievance portal for public services, no service-level complaint mechanism and no resolution figure is held.	Advanced
Malawi	A toll-free short code opened in February 2026 beside an app launched in August 2025. Full record The statutory anchor is thirty years old: the Ombudsman Act establishes the power to receive and investigate citizen complaints against government organs, and no caseload, resolution rate or digital channel of its own is on file for it. 2025-08 - the anti-corruption bureau launched a secure mobile application letting citizens report corruption by text, audio or image, with anonymity and case tracking. 2026-02 - government opened a toll-free national short code as a centralised line for corruption, poor service delivery and abuse of office. Two channels in seven months and no published count of reports received, actioned or closed on either. A channel nobody reports on is indistinguishable from one nobody uses.	Advanced
Mauritius	The government superapp gained a reporting service in July 2026, beside a citizen support portal debated in 2025. Full record A citizen support portal was put to the National Assembly in July 2025 (debate). The government superapp soft-launched in January 2026 (launch). An artificial-intelligence-enabled water leakage reporting service was added to it in July 2026 (service). No case volume or resolution rate is published for either channel, so the base holds the mechanisms and not their effect.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Morocco	The ombudsman opened 9,958 files in 2025, up more than a quarter, while a police reporting platform has taken 12,614 reports since June 2024. Full record The ombudsman's 2025 report gives 9,958 files opened, 1,653 settlement decisions, a mean 815 days to implement a recommendation and 774 days to close a file ending in one (report); the base holds press accounts of the report rather than the report (report, account). The police reporting platform launched in June 2024 and had taken 12,614 reports by the end of that year, with no later count held (platform).	Mixed, a police reporting platform in service against an ombudsman caseload up more than a quarter
Mozambique	A national procurement whistleblowing line was agreed in November 2025 and a personal-data breach reporting platform launched in January 2026; the standing municipal grievance portal is offline. Full record 2026-01-28 — the ICT institute launched a platform for citizens to report personal-data breaches and misuse, with a published complaint-handling workflow. 2025-11-12 — the finance ministry and the prosecutor-general signed a memorandum establishing a national confidential reporting line for citizens, suppliers and public servants to report corruption in public procurement. The standing channel is not working. The municipal development programme's grievance mechanism — an online form with tracking, a phone line and dedicated addresses — states on its own page that it is offline and read-only. Two new channels opened in the window and no complaint volume, response time or resolution rate is published for any of the three, so what reaches a decision cannot be stated.	Advanced, two national reporting channels opened while the standing municipal portal is offline
Namibia	The Ombudsman takes complaints online into an electronic case system, and two regulators launched an artificial-intelligence complaint pilot in December 2025. Full record The Ombudsman's annual report for 2024 records intake by online submission, website form, electronic mail, short message and social media, feeding an electronic case management system (report). The central bank and the communications regulator launched a pilot connecting over 2,000 banking, insurance, non-banking and telecommunications businesses into one multilingual complaint-resolution platform speaking Afrikaans, English, German and Oshiwambo (pilot). The health ministry launched a standard operating procedure for complaints at public health facilities in June 2026 (procedure). A free application takes public reports of infrastructure faults. No complaint volume or resolution rate is published for any of the four channels.	Advanced
Nigeria	A presidency citizens e-feedback portal launched in March 2025 with an initial cohort of agencies onboarded; nothing in the window moved it. Full record The service-compliance office launched the portal in March 2025 on an open-government basis, with an initial group of ministries, departments and agencies onboarded. No complaint volume, resolution rate or agency-coverage figure has been published since, so the portal's use is unestablished.	No change
Rwanda	A general-purpose citizen engagement platform was trial-launched in January 2026, and assembly reporting was routed through the electronic complaints system in June. Full record The local government and technology ministries trial-launched a general-purpose citizen engagement and feedback platform in January 2026 (launch). Revised citizens' assembly guidelines in June formally route assembly reporting through the electronic citizen complaints system, adding a digital reporting mechanism to a local forum (guidelines). Neither carries a caseload, response-time or resolution figure, and the sector plan's own assessment is that existing forums have not translated into influence over policy and budgeting (plan).	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Somalia	A grievance mechanism manual published for the regional digital project sets a multi-level channel with hotline, messaging, email and suggestion boxes. Full record The manual establishes a formal grievance and feedback mechanism running from community through federal member state to ministry, combining digital and non-digital channels — hotline, messaging and text, email, suggestion boxes — aligned to the financier's stakeholder-engagement standard (manual). It is project-scoped rather than a government-wide portal, and no caseload figure is published for it. At municipal level a citizen-engagement platform launched in Baidoa in September 2025 (launch); no federal equivalent is held.	Advanced
South Africa	A province launched a road-defect reporting application that routes each report to the responsible authority, and a municipality launched a service-request channel. Full record 2026-03-04 — a road-defect reporting application launched, geolocating each report and routing it to the responsible road authority, issuing reference numbers and status updates to the reporter. The routing and the reference number are what distinguish it from a complaints inbox, and no volume figure is published. 2026-03-02 — a municipality launched a digital service-reporting channel letting residents log and track requests and receive municipal updates. Both are sub-national and both arrived in the same week. No national feedback channel appears on this ledger, and neither publishes a resolution rate — which is the measure that separates a reporting channel from a service.	Advanced
Sudan	The cabinet opened a complaints and suggestions page on the government portal, and a humanitarian mechanism handled over 230,000 cases in 2025. Full record The ministry of cabinet affairs opened a dedicated complaints and suggestions page on the government portal as a direct channel for citizens, for immediate follow-up (announcement). No caseload or response figure is published for it. The inter-agency mechanism — digital channels plus over 150 community champions, almost 20 of them with disabilities — received more than 230,000 feedback cases in 2025 with almost 90 per cent closed, and over 570 community reports covering the needs of more than 3 million people (chapter). The same chapter records 57 per cent of consultation respondents not knowing how to submit feedback at all (chapter).	Advanced
Uganda	Six of nineteen service centres were operational at a readiness inspection, and the two accounts conflict on the early-2026 operational count. Full record Six of nineteen were operational at the inspection, and two accounts conflict on the early-2026 count (centres, construction). A further centre began construction on a USh4bn contract at the postal service's premises, on a model cabinet approved in 2019 (centre). Their throughput was made contingent on a backbone phase whose latest reported position is a 2023 loan approval, so the constraint on the one-stop centres sits outside the centre programme.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Zambia	Health charters linked facility accountability to the citizen support portal, and labour cases now reach districts with no office through it. Full record 2025-01 — cabinet office launched the national citizen support portal. 2025-11 — national health service delivery charters formally linked facility-level accountability to the portal and to the anti-corruption commission's whistleblower system — a feedback channel gaining a service standard to be measured against, which is what turns a complaint box into accountability. 2026-08 — labour ministry staff were trained to handle labour cases through the portal, extending it to districts with no physical office. No case volume, resolution rate or response time for the portal is published, so its reach can be described and its performance cannot.	Advanced
Zimbabwe	409 free public wireless hotspots are deploying, and a digital centres programme is described as established nationwide offering free internet, equipment and literacy training. Full record The hotspot figure is ministry-reported (hotspots). The digital centres are described as established nationwide with no count, location list or usage figure (centres, kits). A presidential internet scheme is cited as the channel for satellite access with no site count published, and its start date is padded to 2025 because the source says only "earlier this year" (scheme).	Advanced

Citizen participation in policy

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	The finance ministry's budget reform programme lists citizen participation in budget policy; no consultation is recorded. Full record The ministry's page on the organic budget law reform programme explicitly lists citizen participation in the preparation of budget policies among its aims. No consultation, submission count, published response or participation mechanism follows from it anywhere on this ledger. The nearest working channel is a grievance one rather than a policy one: the ombudsman named digitisation of the citizen complaints register as a priority in May 2026, and the virtual citizen reception this ledger holds separately carries no volume figure.	No change, a first stated position with no earlier account behind it
Angola	Two instruments opened or closed public consultation in the window, on digital government and on data protection. Full record 2026-05-06 — public consultation opened on a digital government bill, framed expressly around ending the dispersion of sector rules since 1997 and keeping the digital law and the data-protection law in step, against a stated administrative reorganisation running to 2027. No draft text and no tabling date is held. 2026-06-17 — consultation closed on the data protection revision, due at the Council of Ministers and then parliament. Consultation is happening and its effect is not visible: no source publishes who responded to either exercise, what was said, or what changed in a text as a result. Set against them, parliament rejected the one amendment that would have opened the citizen and electoral databases to parties and citizens, reported under data protection legislation.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Botswana	The pre-budget consultation and constitutional court consultations both ran in the window, on top of the statutory local channel. Full record 2012 – the Local Government Act establishes councils and, at Part XII, the district, urban, village and ward development committees that carry citizen participation into local planning. 2026-01-27 – the pre-budget consultation drew local authorities, youth, civil society and labour into the 2026/27 priorities. 2026-01-29 – trade unions and faith bodies were consulted on the proposed constitutional court, framed as giving vulnerable citizens a route to challenge unfair decisions. No participation figure, and no record of how a submission changed a decision, is held.	Advanced
Burundi	An open online consultation ran on a donor partnership framework, and a data governance strategy was validated with public, private and civil-society actors. Full record The communal administration statute is the founding basis for participation: open communal meetings, consultation of the base for the communal development plan, and hill and quarter development committees. 2025-11-06 to 07 – a national validation workshop for the first data governance strategy followed a stakeholder engagement workshop that brought public, private and civil-society actors together to identify priorities. 2026-04-21 to 05-05 – an open online consultation on a donor partnership framework took views from civil-society organisations, non-governmental organisations, the private sector, academia and the media. It is the clearest instance in the window of an online consultation channel addressed to Burundians – and it was opened by an external body rather than by government.	Advanced
Comoros	The data strategy was validated through multistakeholder engagement with ministries, universities, private sector and civil society. Full record 2026-07 - the draft strategy was reviewed and collectively validated over two days with ministers, regulators, private sector, universities, researchers and development partners, after a capacity-building phase in May. 2026-08 - the strategy was validated as reflecting Comorians' own priorities, following multistakeholder engagement sessions across those same constituencies. The Council of Ministers had sponsored a working group for it in March. The standing arrangement is narrower and is project governance: the digitalisation support project's steering committee seats government, the regulator, the university and civil-society organisations, and its design records consultations with civil society and local communities. No standing national forum, consultation duty or published response exists on file.	Advanced
Congo	A citizen watch of 75 observers reported the polling-day telecommunications shutdown at the March 2026 presidential election, the base's only independent monitoring of it. Full record A Congolese association presented a citizen-monitoring report on the March 2026 presidential election in Brazzaville on 25 July 2026, built on 75 citizen observers deployed across several departments using field observation, interviews, social-media analysis and official documents. It named the polling-day telecommunications shutdown among its main findings, alongside difficulties with the reliability of the electoral rolls, questions over the equity of media coverage and the circulation of false information on social networks, while concluding the election was broadly calm (report). The same association ran a third public session on social media and disinformation on 11 August 2026 at a francophone digital campus of the national university (session). Both are civil-society work financed by a foreign embassy's media and information-integrity fund. No official response to the shutdown finding is on the record, and no duration, scope or legal basis for the shutdown itself is published.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Djibouti	The third development plan was consulted across five regions over three weeks, each required to file a validated contribution. Full record 2025-08-06 - the plan's regional consultation at Dikhil formed part of a five-region, three-week process, each region required to produce a validated contribution report feeding the national plan. 2025-10-06 - co-design workshops brought producers, extension agents, community radios and associations into the design of digital agricultural advisory services, including their data-governance arrangements. 2025-12-06 - the draft land policy was reviewed at Tadjourah with regional authorities, covering access to land for women, youth and vulnerable groups. Every one of these is a convened meeting. No standing or online participation channel exists on file.	Advanced
Egypt	An electronic participation index of 0.5890 ranks 74 of 193; the one published mechanism is a regulator consultation framework. Full record The measured position is an electronic participation index of 0.5890, ranked 74 of 193 in the 2024 survey, against an electronic government development index of 0.6699 and rank 95 - participation scoring better than delivery, which is unusual. The only published mechanism behind it is the telecom regulator's framework for public consultations, with no consultation recorded under it. What operates on any volume is grievance rather than participation: 195,000 complaints, appeals, requests and enquiries in September 2025.	No change, a first stated position with no earlier account behind it
Equatorial Guinea	The consultation body created by decree in 2021 had its composition deferred and has not been recorded meeting. Full record The decree adopting the national development strategy creates an observatory and defers deciding who sits on it. Nothing since records it constituted. The participation that has happened is by invitation to single events: a national artificial intelligence forum drawing ministry, university and international research participants in May 2026, and an interministerial task force on paying digital creators formed in April.	No change
Eswatini	Budget consultations took the national budget process to the regions in 2025, run in response to a 2023 national forum resolution. Full record The finance minister opened an annual round of regional consultations taking the budget process to citizens, in response to a resolution of the 2023 national forum (consultations). That forum is the constitutional route by which citizens petition: Parliament's own record at the state opening describes it as the standing citizen forum (Parliament). The Prime Minister presented a proposed thirty-year national plan to members of parliament in August 2025 with a call to consult their constituencies (presentation). None of the three produces a document on this base: no attendance figure, no submission count, no constituency report, and no trace of any of it in the estimates.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Ethiopia	A national dialogue conference of around 4,000 participants concluded in August 2026, deliberating eight national agenda items (conclusion). Full record The Ethiopian National Dialogue Conference ran from 15 July to 22 August 2026 with around 4,000 participants deliberating eight national agenda items, and submitted its recommendations to the National Dialogue Commission (conclusion). The World Bank ran stakeholder consultations on its 2027-2036 country partnership framework across government, development partners, the private sector, civil society and regional governments, with an online window in May 2026 (consultations). The standing basis is constitutional: citizens have the right to participate in public affairs directly or through elected representatives, and government has a duty to promote participation in forming national development policies (constitution). The base holds participation events, not their effect: nothing records which recommendations were adopted.	Advanced
Gambia	Eight draft instruments went out for public comment in April 2026 under published guidelines. Full record The consultation notice of 2 April 2026 is the clearest single act of participation in the window: eight drafts open at once, under guidelines the regulator published alongside them. The national policy handbook mandates participatory, evidence-based policymaking as the standing rule, and validation workshops carried it in practice for telecom pricing tools in November 2025 and a draft e-commerce policy in September 2025. The Communications Bill went the other way: second reading raised unresolved surveillance-oversight concerns.	Advanced
Guinea-Bissau	A youth dialogue closed with policy recommendations weeks before platforms were blocked nationwide. Full record Structured participation was running: a youth leadership dialogue closed with policy recommendations in October 2025, and the peacebuilding fund's progress report covers ten projects from electoral law to digital-media training. The channel narrowed a month later: radio shutdowns and a nationwide block on four major platforms after the November 2025 takeover, followed by a law against false online information in May 2026.	Regressed
Kenya	A riders' association petition on borrower data and vehicle tracking was committed to the Public Petitions Committee in August 2026. Full record It alleges that an asset financier breaches data-protection law in its collection, processing, storage and sharing of borrowers' personal data and in the tracking devices fitted to financed motorcycles (petition). No finding, regulator action or company response is held. It is the base's clearest instance of a constituency reaching a digital-rights question through Parliament rather than through the regulator.	Advanced
Lesotho	A public survey of digital services experience opened in August 2026 covering access, usability, trust and skills gaps. Full record The survey opened on 9 August 2026, run by the ministry with the United Nations development programme as part of a donor-backed digital readiness assessment, and covers online applications, digital payments and health and education platforms (survey). No closing date, sample target or commitment to publish the results is stated, so the base records that citizens were asked and not that the answers will be seen.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Liberia	The 2010 Act grounds participation; a November 2025 consultation brought non-state actors into data-policy drafting. Full record The Freedom of Information Act defines documents to include electronic records, allows requests by electronic mail, obliges every public authority to maintain a publication scheme in soft copy, and constitutes the Independent Information Commissioner on which the online request platform was later built. A two-day multi-stakeholder consultation on 13-14 November 2025 brought civil society, academia, the private sector, development partners and the media into drafting the National Data Policy. The independent review of the 2024-2026 open government plan rates the electronic procurement rollout and the beneficial-ownership registry its strongest commitments.	No change
Libya	A consultative forum of about 120 members, 35 per cent women, with no binding power. Full record The United Nations mission's own account is candid about the limit: about 120 members, 35 per cent of them women, and no binding power over any decision. Other participation is issue-specific and did move: stakeholders neared consensus on a missing-persons draft law at a March 2026 meeting, and the information authority opened community consultations for the seventh national human development report, including a session dedicated to women.	Advanced
Madagascar	The Refondation implementation programme of November 2025 commits to digitising the electoral roll and to a digital governance mechanism. Full record A decree of June 2015 established the local consultation structure for decentralised territorial collectivities, the standing statutory participation mechanism (decree). The state policy implementation programme signed in November 2025 commits to accelerating digital transformation of the state through a national digitalisation policy and an inter-institutional mechanism piloted from the prime minister's office, and to digitising the electoral roll and computerising the electoral commission's process (programme). No digital participation platform, consultation portal or published response to a consultation is held. The commitments are to digitise an electoral process rather than to open one.	Advanced
Malawi	Parliament and civil society launched a structured platform on 18 March 2026, replacing fragmented engagement. Full record The right is constitutional: authority derives from the people at section 6, and section 40 carries political rights to participate in and influence government policy. No implementing instrument attaches to it. 2026-03 - a civil-society coalition put district-level budget-tracking evidence to parliamentary committees to lobby on education financing, which is participation carrying its own data. 2026-03 - Parliament and civil-society organisations met formally for the first time on 18 March, launching a structured platform. What the base cannot show is any of it changing a text: no submission, response or amendment traceable to a consultation appears on the record.	Advanced
Mali	A project on digital tools and citizen participation reached the stage of capitalising on what it has achieved (report). Full record A project on digital tools and citizen participation reached the stage of capitalising on what it has achieved (report). No participation figure is stated.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Mauritius	Two consultations opened inside four months: national consultations on a 2050 vision and online pre-budget consultations. Full record Periodic reporting to the regional human rights commission is the standing record of participation (report). National consultations on a 2050 vision were launched in December 2025 (launch). Pre-budget consultations for 2026-2027 were opened online in March 2026 (consultations). No account of a consultation changing a published position is held, and no submission count is published for either.	Advanced
Morocco	An online proxy-voting platform for citizens resident abroad opened in August 2026 for the September legislative elections. Full record The platform runs from 24 August 2026 until noon on 22 September under organic law 27.11: the voter abroad names a proxy registered on a domestic electoral roll, certifies the mandate personally, then downloads and sends the mandate on to the proxy (platform). Polling-station notifications are delivered over the same period, and the ministry stressed that the notification is not required to vote, the national identity card remaining the only accepted proof of identity at the polling station.	Advanced
Mozambique	The five-year government programme commits to citizen and non-state participation in policy, and a national dialogue opened public consultation in September 2025 with ten public-nominated working groups. Full record 2025-09-10 — the Presidency launched the national and diaspora public-consultation phase of an Inclusive National Dialogue, with a technical commission including civil-society members and ten public-nominated working groups covering district, provincial, central and diaspora levels — the widest-reach participation channel opened in the window. 2026-03-04 — the social security institute opened a nationwide consultation across all provinces, to 27 March, on revising the compulsory social security regulation, consulting workers, employers, unions, pensioners, academia and civil society against a recorded base of more than 2.8 million worker-beneficiaries and about 42,000 pensioners. The commitment behind both is Programme 4.1.3 of the government's five-year programme, on democracy and participation. What the base does not hold is any account of what a consultation changed: no submission count, response or published outcome for either exercise.	Advanced
Namibia	An electronic identity awareness campaign is running region by region in local languages, with a youth ambassadors programme promoting take-up. Full record The campaign opened in the capital region and its Omaheke leg ran across all seven constituencies in late July and early August 2026, run by home affairs with a development agency and the regulator, with a brand ambassador running sessions in local languages (campaign, conference, preparation). A youth ambassadors programme uses young people to promote take-up and civic participation; participant numbers, cost, duration and any enrolment effect are not stated, and the funding agency's own account is the only source (ambassadors).	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Nigeria	The 2023-2025 action plan closed with its open-budget commitments named among those that did not achieve their intended results. Full record The commitment on citizen participation across the budget cycle was carried in the 2023 action plan. The independent reporting mechanism's final report on that plan, published 28 April 2026, names the open-budget commitments among those that did not achieve their intended results, attributing this partly to the leadership transitions that followed the 2023 elections. Participation in the plan's own co-creation was concentrated in Abuja and Lagos, with high logistics costs and accessibility barriers limiting it elsewhere. No successor budget-participation commitment is held.	Stalled
Rwanda	The twentieth national dialogue resolved that performance contracts should better reflect citizens' concerns — the government's own account of a gap it names. Full record The sector strategic plan states in its own self-assessment that existing dialogue forums have not yet translated into effective influence over policy and budgeting (plan). The national dialogue convened 5 and 6 February 2026 resolved that performance contracts should better reflect citizens' concerns (resolutions) — a resolution that answers the plan's own criticism. Assembly frequency doubled and reporting moved onto the electronic complaints system in June (guidelines). Whether any of it changes a budget line is not something the base can show.	Advanced
Seychelles	Public support for access to government information was measured in a survey round fielded in 2025 and published in August 2026. Full record It is the only measure of public opinion on information access in this ledger (support). It arrives in the same dispatch as the media-freedom perception measure and the report of the broadcasting amendment, so a single external survey is carrying the whole of this unit's civic-participation record.	Advanced
Somalia	A national budget consultation drew 308 in-person and up to 1,700 online participants in October 2025, with recorded questions and agreed follow-up. Full record The finance ministry's three-day consultation in Mogadishu ran sessions for federal and member-state government, civil society and marginalised groups, and the private sector and academia, with recorded questions and answers and agreed follow-up actions feeding the 2026 budget (report). The regulator's April 2026 review of the draft cybersecurity framework brought in government, private sector, education, civil society and technical experts (consultation). Both are government-convened. The one instance of independent initiation is a civil-society advocacy position issued in July 2026 (position).	Advanced
South Africa	A civil-society coalition asked the rights commission to halt data-centre developments pending transparent public participation; no participation process or commission response is on record. Full record 2026-08-10 — a climate justice coalition submitted concerns to the human rights commission calling for a halt on data-centre developments pending transparent public participation, citing strain on scarce water, land and electricity. No participation process, commission response or moratorium is on record. The route it took is the finding. There is no statutory participation step for these approvals to attach to, so the objection was lodged with a rights body rather than a planning or energy regulator, and it arrived alongside the commission's own call for submissions. Participation happening through a human rights complaint is a description of what the ordinary process does not provide.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
South Sudan	The state's own human rights commission rated the country weak on transparency and participation and very weak on accountability, with access to public information limited. Full record Officials of the national human rights commission told a Juba panel on 2 September 2026 that the government treats civil society organisations as enemies or political opponents, rated the country weak on transparency and participation and very weak on accountability, and said access to public information remained limited with civil society given little opportunity to take part in government processes including preparation of the national budget (panel). Participants said the revenue authority, which is required to publish revenue-collection information, has not consistently done so, and that the body responsible for access to information lacks the staff and capacity to enforce the law (panel). No index, methodology or dated measurement sits behind the weak and very weak ratings, and the assessment is the state speaking about itself.	Advanced
Sudan	A messaging-app consultation platform with over 9,000 subscribers ran a ceasefire round, and a response plan drew on 3,429 community members. Full record The platform, built on a messaging chatbot and a deliberation tool, ran a consultation round in October 2025 gathering citizen input on ceasefire negotiations among communities inside the country and in the diaspora; the operator states it is voluntary and not statistically representative, and complements rather than replaces in-person dialogue (report). A consultation process between August and October 2025 engaged 3,429 community members and 145 community-based organisations, including women-led organisations and organisations of persons with disabilities, across all 18 states, to inform a response plan (chapter). Both are humanitarian. The closest governmental instrument is an engagement outcome in a country team report (report).	Advanced
Zambia	More than 11,860 citizen submissions were handed to the President and became an enacted constitutional amendment. Full record The 2016 constitutional amendment provides for citizen petition and public involvement in the legislative process. 2025-12-02 — more than 11,860 citizen submissions to the constitutional reform process were formally handed to the President, converting a nationwide consultation into a policymaking input. 2025-12-18 — a constitutional amendment was enacted creating a mixed-member proportional representation system with reserved National Assembly and council seats for women, youths and persons with disabilities. Consultation reaching enactment inside a month is the rarest sequence on this frame; what is not published is which of the submissions the amendment reflects.	Advanced
Zimbabwe	A citizen scoring platform launched in June 2026 lets residents rate local-authority service delivery, and the AI strategy records a three-city consultation. Full record An artificial-intelligence platform through which citizens rate and flag local-authority service delivery was launched by the President on 18 June 2026, built by a Zimbabwean startup incubated at a state technology institute (platform). The artificial-intelligence strategy names a national multi-stakeholder consultation held in Harare on 28 August 2025 and in Bulawayo and Masvingo on 9 and 11 September 2025, whose interrogation and validation of an earlier draft produced the final text (strategy). Parliament's own record shows the standing scrutiny machinery in operation, the legal committee reporting non-adverse certificates on the statutory instruments gazetted that month (record). No participation, submission or usage count is held for any of the three.	Advanced

Gender equity

COUNTRY	DEVELOPMENTS	PROGRESS
Botswana	A four-pillar gender-responsive violence prevention programme launched in June 2026, with one-stop centres being established. Full record 2026-03-24 — one-stop service centres are being established to bring medical, legal, counselling and psychosocial support for survivors of gender-based violence under one roof, addressing the gap between reporting and support. 2026-06-10 — a joint government and United Nations gender-responsive prevention and response programme was launched on a four-pillar framework. The Department of Gender Affairs is secretariat to the National Gender Commission. No prevalence, caseload or centre-count figure is published.	Advanced
Burkina Faso	The only gender-and-digital instrument on the base ended in 2025 with no evaluation, outturn or beneficiary count. Full record A EUR 2.25m grant programme for girls and women in digital ran from 2021 to 2025 and is recorded closed, with no evaluation, outturn or beneficiary count in the base. It is the only gender-and-digital finance instrument held for the country, and it has ended without a published result. What remains is a training line: 169 young women trained in digital trades in 2025, inside a general skilling programme rather than under any gender instrument. No access, usage or ownership figure is disaggregated by gender anywhere on this ledger — the urban and rural access gap reported under digital divides is explicitly not broken down that way — so the closure removes the only dedicated instrument from a field with no measurement.	Regressed
Burundi	A national survey is the standing sex-disaggregated measure of access to financial and digital services; digital platforms against gender-based violence were built. Full record The national financial inclusion survey is the standing sex-disaggregated measure of access to financial and digital financial services in Burundi, and the only recurring gender-disaggregated series the base holds on this subject. 2026-04-09 — the responsible ministry and a UN agency presented digital platforms built under a national gender-based-violence observatory project: a citizen-facing alert and case-management system through which victims report and are referred for assistance, plus an interventions-management system for the institutions involved, funded by the European Union. What is absent is any sex-disaggregated measure of digital access itself — of device ownership, internet use or digital skills — so gender equity is read here through financial services and through a violence-reporting tool rather than through the technology.	Advanced
Cameroon	A EUR 3m gender-divide project remains active with no dated progress, output or Cameroon-side figure recorded in the window. Full record The project is recorded active with EUR 3m committed for 2023 to 2026, and the position is identical at both ends of the window: no dated progress, output or Cameroon-side figure. It is the only finance record in the tracked non-state set classified to any inclusion subject. The base holds no sex-disaggregated access, usage or ownership figure for Cameroon at all, so a project running to 2026 on closing a gender divide has no measurement of that divide to be read against.	No change

COUNTRY	DEVELOPMENTS	PROGRESS
Central African Republic	The national review report is the authoritative statement of the digital gender divide, against 4.1% of men and 1.5% of women holding technology competences. Full record The national review report of September 2024 is the most authoritative recent statement of the gender dimension of the digital divide. The measured gap beneath it is the household survey's: 4.1% of men and 1.5% of women hold the technology competences it tests - a ratio of nearly three to one on a base so low that both figures are close to zero. No programme, target or obligation addressing it appears on this ledger, and no later measurement exists to say whether it has moved.	No change, a first stated position with no earlier account behind it
Comoros	A women-entrepreneur training programme is named as a 2025 milestone in a group's own strategy communication. Full record The programme is named as training of women entrepreneurs across the country, with no participant count, budget or start date. It is company-reported through a byline-light press wire and the group's own announcement is not held. Nothing earlier exists to compare it against, so no direction can be stated. The base holds no sex-disaggregated figure for phone ownership, internet use, account holding or training completion for this country, and the one quantified gender target on file is the share of trainees the technology park states it will reach.	No change, a first mention with no participant count, budget or start date
Cote d'Ivoire	The only sex-disaggregated measurement is 2017 fieldwork showing a 34-point ownership gap; new programmes state women's targets instead. Full record The regulator's Panorama, deposited with the ITU in May 2019 on 2017 fieldwork of 2,892 households, found 81.38% of men against 47.19% of women owning a mobile phone, a 34-point gap, and usage of 85.27% for men against 58.67% for women. Nothing sex-disaggregated has been published since, so the only measurement of the gap is nine years old. What moved instead is programme design. The small-enterprise guarantee windows state attention to women's entrepreneurship, and access to the new digital-fabrication laboratory is stated to target 50% women. Neither carries a baseline or a reported outcome, so neither is measurable against the gap.	Mixed, two programmes state women's targets while the only measurement of the access gap is nine years old
Djibouti	Two training programmes in the period target women explicitly; no gender-disaggregated access figure is published. Full record 2025-11-24 - the skills programme was launched to train more than 3,000 young people and women by 2029 through a coding campus, regional digital houses and support to business institutions, funded at EUR 7m over four years. 2026-05 - a regional call opened gender-sensitive digital-trade training in mobile money, electronic commerce, digital marketing and financial literacy to women and youth enterprises, with women given application priority. Both are commitments to train. No sex-disaggregated figure for internet use, device ownership, account ownership or public-service use appears anywhere on file.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Egypt	Women's financial inclusion reached 72.5% against 19.1% in 2016, and a second accelerator cohort of twelve women-led startups opened. Full record Financial inclusion overall went from 76.3% of adults at June 2025 to 79% at end-June 2026, 56.4 million active accounts of a 71.4 million eligible population counting bank accounts, postal accounts, mobile wallets and prepaid cards, with women at 72.5% against 19.1% in 2016 and ages 15 to 35 at 58% against 36.3% in 2020; a second national financial inclusion strategy for 2026-2030 is in development. 2026-08-24 - a second accelerator cohort opened with twelve women-led startups and USD 35,000 in equity-free grants split between three at the end; the first edition's outcome is not on file. Against the inclusion gains, the only literacy measure held shows the knowledge barrier to mobile money falling harder on women than on men.	Advanced
Equatorial Guinea	No sex-disaggregated digital figure is published; the national yearbook carries none. Full record The eighth national statistical yearbook publishes civil service headcount, online visas and debt, and no connectivity or digital-skills figure by sex. Nor do the programmes count it: the artificial intelligence and robotics scheme targets 1,000 young people and 400 trainers and the trainer cohort selected 50 from 466 applicants, neither with a sex breakdown. The absence is the finding.	No change
Eswatini	Fifty women from government institutions formed the first cohort of a digital academy in July 2026; no gendered access figure is held. Full record The country was the African pilot for a women's digital academy, with a first cohort of fifty women drawn from government institutions (academy). The digital readiness assessment identifies women and girls among the groups at risk of digital exclusion, and places the country at the systematic stage across all six pillars (assessment). The FinTech Strategy 2025-2030 commits to new digital financial products for underserved groups by 2028 (strategy). Account ownership stands at 63 per cent, led by mobile money (survey), and is not published split by sex. Neither is internet use, device ownership or digital skill: the base holds a diagnosis, a cohort of fifty and no measurement.	Advanced
Ethiopia	The rural mobile-internet gender gap is put at 81%, against 29% in urban areas. Full record The gap between men's and women's mobile internet use is reported at 81% in rural areas against 29% urban (gender gap). No earlier figure is held, so the level is on the record and the direction is not, and nothing is held on what is being done about it: no target, no programme and no gender-disaggregated figure for identity enrolment, account ownership or device access.	No change, a first measurement with no earlier figure behind it
Gabon	63.7% of women against 72.4% of men held a financial account in 2024. Full record The World Bank's Gabon country factsheet, data as of 2 April 2026, puts accounts at a financial institution at 63.7% of women against 72.4% of men, and use of a mobile phone or the internet to pay bills at 35.4% of women against 40.9% of men, both for 2024; it also records 25.5% of parliamentary seats and 27.6% of ministerial positions held by women. It is the first gender-gap series the base holds for Gabon, so the level is stated and the direction is not. No national gender-and-ICT survey or results framework reporting against a target is held.	No change, a first measurement with no earlier figure behind it

COUNTRY	DEVELOPMENTS	PROGRESS
Gambia	A 2025-2034 gender policy replaces one that expired in 2020, and a women's digital-economy project launched in October 2025. Full record The policy succeeds an instrument that lapsed in 2020, so the country ran five years without one. The digital-specific action is a project launched in October 2025 to give women-owned small firms digital skills, e-commerce and finance access. Measurement arrived separately: a gender data dashboard for The Gambia published in April 2026, and connectivity and financial inclusion microdata released in October 2025. No sex-disaggregated internet-use figure is published by the statistics office.	Advanced
Ghana	A women's business bundle passed 54,000 subscribers against a 20,000 target for 2028, on a base where women are 14 per cent less likely to use mobile for business. Full record The bundle launched in April 2025 for women business owners and had more than 54,000 female subscribers by May 2026 (bundle). The same industry research finds women micro-entrepreneurs 14 per cent less likely than men to use a mobile phone for business and 17 per cent less likely to use one across three or more business use cases, naming affordability of data, low perceived value, weak skills and confidence, and limited access to internet-enabled handsets as the barriers (research). A long-running girls' programme has reached about 18,000 girls and 1,800 teachers since 2012 on a two-week residential model, and added an artificial-intelligence module as its largest curriculum expansion after a vendor agreed free training for 3,000 girls (girls programme); the 18,000 is cumulative rather than annual, and no start date, cohort or delivery report has followed in five months (girls programme).	Mixed, a business bundle beat its target while the measured gap in business use of mobile persists
Guinea-Bissau	Women hold 49 per cent of the legal rights men hold and 22 per cent have an account. Full record The gender data landscape published in April 2026 is the first sex-disaggregated evidence the base holds for Guinea-Bissau: women hold 49 per cent of the legal rights men hold, and only 22 per cent have a bank or mobile money account. The training response is small and counted: 50 women completed a seven-day digital security and financial literacy trainer course in July 2026, and more than 260 women traders received regional biometric cards at the border in March.	No change, a first count with no earlier figure behind it
Kenya	Internet use runs at 37.8 per cent of men against 32.2 per cent of women, with rural mobile ownership at 48.6 per cent against 64.6 urban. Full record Urban internet penetration is 56.5 per cent against 25 per cent rural, and more than 42 per cent of women micro-entrepreneurs who own a device use it mainly for personal communication rather than business (figures); the figures are attributed to the statistics bureau and the regulator but cited in a training write-up rather than taken from a published release (figures). A women's digital accelerator opened trainer-of-trainers cohorts in the capital on 19 August 2026 for a first 100 women instructors and in a second county on 24 to 26 August, against a goal of 15,000 women trained across three counties by 2028 (second county); participants are certified after a post-training evaluation, and the organisers state that funding partners scaled back support after aid cuts, forcing a reduction in the project's original scope (second county, first cohort).	Mixed, a training accelerator opened its second county while the measured gaps in use and ownership persist

COUNTRY	DEVELOPMENTS	PROGRESS
Lesotho	A dedicated women in digital forum was held in April 2026; no gender gap figure is published. Full record 2024-12-30 — the National Digital Policy is the overarching statement. 2025-11-20 — the minister described a community inclusion model whose digital ambassador approach targets women. 2026-04-20 — a dedicated women in digital forum ran on the Commonwealth digital roadshow. No sex-disaggregated figure for phone ownership, internet use or digital skills in Lesotho is held, which is what this indicator turns on.	Advanced, on convening rather than measurement
Liberia	36.74 per cent of 3,035 operator training beneficiaries were women, against 3 women among 41 machine-learning graduates. Full record The largest counted throughput is an operator's: 3,035 beneficiaries across 44 sessions in 2025 with a footprint in all 15 counties and 36.74 per cent female participation. It is a training count, not evidence of placement. At the advanced end the picture reverses: 3 women among the 41 machine learning bootcamp graduates and 18 women graduating in Python, out of 204 trained in foundational artificial intelligence. The regional digital project sets a forward target of about 30,000 officials trained at 40 per cent women.	Mixed, strong participation in operator training against three women among 41 bootcamp graduates
Libya	An eleven-point gender gap in account ownership against 74 per cent of women using the internet. Full record The central bank's financial inclusion strategy puts the gender gap in account ownership at eleven points and access to mobile or internet banking at 14 per cent overall. Connectivity is not what stands in the way: the household survey puts 92 per cent of women use mobile phones and 74 per cent use the internet. The international agency series leaves every Libyan gender indicator unreported, so the survey is the only sex-disaggregated evidence the base holds.	No change
Madagascar	The statistics office published its first dedicated gender statistics compendium in February 2026, alongside national survey results. Full record The compendium is the office's first dedicated gender statistics product, aligned to the national gender equality policy for 2025 to 2035 (compendium). Results of the seventh multiple indicator cluster survey were released in February 2026 from fieldwork across 19,785 households (release), a United Nations account putting the sample at about 21,000 households with a 99 per cent response rate covering 43 indicators across 11 goals (account). The two household counts are stated on different bases and are not reconciled. No gender-disaggregated figure for digital access is quoted in either capture.	Advanced
Malawi	The High Court enforced the Gender Equality Act in October 2025, ordering the health minister to amend guidelines. Full record The statute has been in force since 1 April 2014, prohibiting sex discrimination and harmful practices, setting a 40 to 60 per cent sex-balance requirement in the public service and guaranteeing sexual and reproductive health rights. No compliance figure against the sex-balance requirement is published anywhere on file. 2025-10 - the High Court held that denying a raped thirteen-year-old access to lawful termination breached her rights under the Act, ordered the health minister to amend post-abortion-care guidelines, and found the human rights commission in breach of its enforcement duties. It is the first enforcement of the Act on this record. 2026-05 - a nationwide campaign vaccinated more than 2.27 million adolescent girls at 91 per cent coverage in a single week, which is delivery at a scale no digital service here approaches.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Mali	A women's digital-training target of 70 per cent by 2032 was set inside the November 2025 operator loan, with no interim figure published. Full record The target was set as a condition of the development-bank loan rather than by the state (target). No interim figure, baseline or sex-disaggregated measure of access, ownership or use is published for the country, so the only gender commitment in the base sits in a private financing agreement and has no measurement behind it.	Advanced
Mauritius	No gender-disaggregated digital measure is held; the 2026-2027 budget annex carries the statistics office's independence and no such indicator. Full record The budget annex of June 2026 carries the independence of the statistics office (annex). Household ICT penetration is published without a gender split (indicators), and the 2025 ICT release does not carry one either (release). No national gender policy text reached the base. The absence is dated and searched: what would settle it is a gender-disaggregated access or usage figure, or the policy's own text.	No change, a searched absence with no disaggregated measure found
Morocco	An insurance technology and inclusion programme targets about 200,000 new insurance users of whom at least 100,000 are to be women. Full record The activity was reported at pipeline stage in April 2026, committing XDR 371,714.70, about US\$508,015 at the provisional annual average rate, over 2026 to 2028 and executed by the insurance supervisor (activity); total cost is US\$680,000, of which US\$510,000 is grant and US\$170,000 counterpart (activity). It is the only gender target in the base's digital record for the country, and it is a target rather than an outturn: no sex-disaggregated measure of access, use or ownership is held.	Advanced
Mozambique	EUR 28m was signed with a stated focus on women in the digital economy, while the credit gap widened from 31-59 to 34-66 per cent. Full record The agreement was signed in June 2026 within a four-agreement package of EUR 178m, with the recipient organisation unspecified and no disbursement recorded (agreement). Access to credit ran at 31 per cent of women against 59 per cent of men in 2024 and 34 against 66 in 2025, so the gap widened over the same year in which women's mobile money holding rose 24 per cent (gap). The account gap narrowed and the credit gap did not, which is the distinction a headline inclusion figure would lose.	Mixed, EUR 28m signed for women's participation while the gender gap in credit widened
Namibia	The third national gender policy carries a communications theme, and a women in technology initiative launched in May 2026; no gendered access figure is published. Full record The current national gender instrument, approved by Cabinet in October 2023, carries a dedicated thematic area on gender, media, information and communication (policy). A women in technology initiative launched at an industry congress in May 2026 alongside a talent programme targeting 200 women engineers (initiative). A global financial inclusion study catalogued for the country in January 2026 carries sex-disaggregated indicators for mobile phone ownership, internet use and digital financial services from 2024 fieldwork (study); the catalogue entry is held rather than the microdata, so no figure reaches this base. Financial inclusion overall stands at 86 per cent (inclusion). The data to split it by sex exists and is not on the record here.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Nigeria	A digital self-care platform went live for university students, routing to free contraceptives through the state health supply chain with discreet delivery. Full record The platform is live for students at one university and routes to free contraceptives via the state health ministry and an agency supply chain, with discreet delivery and pharmacist support, and expansion to other campuses planned (platform). No user count, uptake figure or data-protection arrangement for reproductive-health requests is published, which is the sensitive-category question the country's own Act would reach.	Advanced
Rwanda	A financing strategy for women entrepreneurs targets USD 75 million by 2029, and a bank memorandum targets over 10,000 women. Full record The revised national gender policy of February 2021 is the operative instrument, covering equal access to education, health and social protection (policy). A financing strategy published in June 2026 sets a mobilisation target of USD 75 million by 2029 for women entrepreneurs (strategy) — a target, not a committed sum, which is why no deal record stands behind it. A memorandum signed in October 2025 targets over 10,000 women for financial and digital inclusion, including 3,000 entrepreneurs and 1,000 cross-border traders (memorandum).	Advanced
Somalia	Women's share of business and identity registrations rose from 21 to 31 per cent between 2024 and 2025, against a study finding education and wealth dominate internet access. Full record A study of 12,408 Somali women finds wealth and secondary education raise the odds of internet access roughly fourteen and fifteen times, that textual literacy is negatively associated with internet use, and that nomadic women show higher financial-inclusion odds through mobile money (study). Women's share of business and identity registrations rose from 21 per cent in 2024 to 31 per cent in 2025 as the registration system expanded into second-tier cities and rural areas (feature). The ministry ran a girls-in-technology forum in April 2026 with the national telecommunications institute (release).	Advanced
South Africa	The gender equality commission announced a national study on women's participation in the digital economy, aimed at policy recommendations to close the access gap. Full record 2026-03-19 — a national study on digital gender transformation was announced by the gender equality commission, on women's participation in the digital economy and aimed at producing gender-responsive policy recommendations to close the digital access gap. Nothing of the kind existed on this ledger before it. The standing instrument beside it is a framework on gender-responsive planning, budgeting, monitoring, evaluation and auditing, which is a budgeting method rather than a digital measure. No sex-disaggregated access, use or skills figure appears anywhere on this ledger, so the study would be measuring something the country has never published.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Sudan	A study found about 10 per cent of women phone owners use them for business, and a programme enrolled 221 women and displaced people in July 2026. Full record The Kassala study identifies practical digital skills, affordability, electricity and connectivity reliability, trust and safety, and institutional intermediaries as what actually stops use, beyond device access, finding only around 10 per cent of women who own phones use them for business (brief). A programme launched on 8 July 2026 enrolled 221 conflict-affected women and internally displaced people in a free three-phase entrepreneurship and digital-entrepreneurship course, delivered in two languages through a mobile-first platform with offline access, running to February 2027 (programme). The regulator runs an annual girls-in-ICT programme (statement). No national gender-digital-access dataset exists.	Advanced
Tanzania	A digital transformation centre for rights and gender equity carries a EUR 3,000,000 commitment for 2024 to 2027 – the only commitment in the whole finance base tagged to digital divides. Full record It is recorded in the compiled finance layer on a year-padded date, with no disbursement, outturn or beneficiary count held (centre). That it is the only such commitment in the finance base is the finding, in a unit whose only measurement of online gendered violence is a civil-society researcher's own study.	No change
Togo	An offline-capable platform for reporting gender-based violence and routing victims to the nearest care point was piloted (pilot). Full record An offline-capable platform for reporting gender-based violence and routing victims to the nearest care point was piloted (pilot). It is a pilot; no case volume or coverage is stated.	Advanced
Uganda	A EUR 2,250,000 girls and women digital programme ran 2021 to 2025 and its stated period has elapsed – the only gender-and-digital-skills commitment in the tracked non-state set. Full record The commitment is recorded for 2021 to 2025 and the period has elapsed (programme). No successor is held. A diversity study of female startup co-founders is the only other gender measure in this ledger, and it holds no prior national figure to compare against.	No change
Zambia	A constitutional amendment reserved National Assembly and council seats for women, over a cross-sector gender status report. Full record The fifth cross-sector gender status report covers governance, poverty, education, health, employment, land and gender-based violence – the standing official measurement. 2025-12-18 – a constitutional amendment created a mixed-member proportional system with reserved National Assembly and council seats for women, the most consequential equity instrument on this ledger and one whose effect is testable at the next election. 2026-04 – specified sexual offences were made non-bailable. What the base does not hold is any sex-disaggregated measure of digital access – of device ownership, internet use or digital skills – so gender equity here is read through representation and law rather than through technology.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Zimbabwe	A national gender policy is in force and a digital skills hub for rural women was launched in October 2025; no gendered digital-access figure is held. Full record The current national gender policy is grounded in sections 17 and 52(2) of the Constitution and names the Data Protection Act as the instrument addressing gender-based violence in digital spaces (policy). The women's affairs ministry launched a digital empowerment initiative in Harare in October 2025 to equip rural women with technology skills for agriculture, business and enterprise (hub). At the artificial-intelligence strategy's launch the United Nations resident coordinator called for gender-responsive and inclusive design and for diverse, high-quality datasets to confront bias and exclusion (launch). Where a gendered figure does exist it is in education rather than access: 152 of the 192 recipients of laptops under a technical and vocational bursary in July 2026 were women (laptops). No sex-disaggregated internet, device or skills figure is published.	Advanced

Inclusion of persons with disabilities

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	A 2025 statute requires accessibility of public services, spaces and communications, and assessment was reorganised. Full record 2025-02-20 - the overarching disability-inclusion statute requires accessibility of public services, spaces and information and communications. 2026-04-05 - decrees reorganised disability assessment: a 15-day maximum decision period, 48-hour notification, home visits where the person cannot travel, and a national appeal commission. The statute's accessibility requirement covers communications, and no accessibility standard for public digital services, no conformity test and no compliance measure follows from it on the record.	Advanced
Botswana	Core Parts of the Persons With Disability Act were commenced and disability defined by regulation in December 2025. Full record 2025-12-04 — two statutory instruments were gazetted, one defining who qualifies as a person with a disability and one commencing specified Parts of the Act. The base holds nothing on accessibility of digital public services, assistive technology provision, or whether the commenced Parts carry duties on the systems this report covers. The instrument is in force and its reach into digital service delivery is not on the record.	Advanced
Burundi	The state's initial report to the disability rights committee sets out the statute, the policy, the national committee and the gaps in access to information technology. Full record Burundi's initial report under the disability rights convention is the state's own comprehensive statement of position: ratification, the 2018 statute promoting and protecting the rights of persons with disabilities, the 2020-2024 national policy, the national committee, assistive devices, census data, and the gaps in access to services and to information and communication technology. It is a baseline and it is the state's own account, submitted nine years after it was due. Nothing else in the base measures digital accessibility: no website accessibility standard, no assistive-technology provision figure and no disaggregated access measure is held, so the position can be described and not tracked.	No change, a first statement of position with no earlier account behind it

COUNTRY	DEVELOPMENTS	PROGRESS
Central African Republic	An international study-period report states the position on access for persons with disabilities; nothing national is held. Full record An international study-period report covering 2018 to 2021 states the position on access to telecommunications and technology services for persons with disabilities and others with specific needs. Nothing later exists, and no national measure, obligation, accessibility standard or programme appears anywhere on this ledger. The country's own disability rights report is separately on the base without a digital dimension. So the position is a five-year-old external assessment and no domestic instrument to check it against.	No change, a first stated position with no earlier account behind it
Comoros	The 2014 disability law is formally in force and largely unimplemented: the high authority it creates was never set up. Full record The law's own text is now on file: forty-nine articles adopted on 22 December 2014 and ratified by decree in May 2015, providing an equality-of-opportunity card at article 3 and a high authority at article 45. A joint civil-society submission to the forty-sixth periodic review describes it as formally in force and largely unimplemented: the high authority was never constituted, the card is not applied, and the law lacks the accessibility and reasonable-accommodation provisions of the 2006 convention. 2026-04 - a roadmap to implement the review's recommendations was launched at Fomboni with civil society and technical partners, ahead of the next review in 2029. Nothing in the law or the roadmap addresses digital accessibility.	No change, a law in force for eleven years with its principal machinery never constituted
Djibouti	A skills project trained about 1,500 people on pathways prioritising persons with disabilities, among other groups. Full record 2026-04-20 - the skills development project reports about 1,500 people trained in logistics, construction, energy, hospitality, big data, cybersecurity and other sectors, described as inclusive by design with training pathways prioritising women, refugees and persons with disabilities and adapted support alongside. That is the whole of the record. No number of participants with disabilities is given, no accessibility standard for public digital services is on file, and no assistive-technology provision or accessibility audit of any government platform appears anywhere in the base.	Advanced
Egypt	An accessibility toolbar was published on every page of the ICT ministry's own website under a presidential initiative. Full record The base carries no accessibility tooling or standard before this date. The toolbar offers screen-reader compatibility, keyboard-only navigation, text enlargement, contrast switching, font and line-spacing changes, reading-focus highlighting, animation suppression, cursor enlargement and link highlighting, executed by the ministry's academy for persons with disabilities, whose mandate is to propagate the standards to other government bodies. No deadline, list of bound entities, conformance level or audit route is stated, so what exists is a demonstration rather than an enforceable standard - on one site, against 242 services on the national platform and 460 licences on the investment window.	Advanced
Equatorial Guinea	The state's own review names no disability statute, only a 2022 national agenda. Full record The national report to the human rights council's periodic review is the state's own account, and it names no disability statute — a 2022 national agenda is the whole of the framework it cites. With no statute there is no accessibility duty to attach to public digital services, and nothing in the base records disability-disaggregated access data or an accessibility standard for any Equatoguinean platform.	No change

COUNTRY	DEVELOPMENTS	PROGRESS
Eswatini	The country launched its first costed disability plan in July 2026, and 13 assistive devices were handed to schools in June. Full record The Persons with Disabilities Act of 2018 establishes the national advisory council and a right of access to information and communications technology (Act). Eight years later the first costed national plan of action for 2026-2028 was launched with United Nations cultural-organisation support, as the funded implementation roadmap for that Act (plan); no budget figure for it is held. The communications regulator's universal access fund handed 474 smartphones for vulnerable citizens and 13 specialised assistive devices, including screen and braille readers, to the education ministry for learners with visual impairments (handover). Disability indicators were integrated into the education management information system in November 2025, which is the first step towards counting the learners the devices are for.	Advanced
Ethiopia	Two national disability inclusion guidelines were disseminated, moving from policy development to mandated implementation (guideline). Full record The national guideline for inclusion of persons with disabilities in skill development and employment was officially disseminated in February 2026, developed with the labour and skills ministry after a one-year review and moving from policy development to implementation across technical training and the labour market (guideline). A disability inclusion guideline for food security was launched at a national dissemination workshop in August 2025 and handed over to the women and social affairs ministry, the urban and infrastructure ministry and disability associations (workshop). The statutory basis is Ethiopia's ratification of the Convention on the Rights of Persons with Disabilities in 2010 (ratification). Neither guideline addresses digital access, and the base holds nothing on accessibility requirements for public digital services. 2026-09-01 — an operator foundation and the national federation of disability associations signed a three-year memorandum framing collaboration on digital inclusion, accessible technology, inclusive education, economic empowerment, healthcare and rights advocacy (memorandum). It is the first private-sector instrument on this indicator; the two guidelines before it were state ones, and no target, budget or beneficiary count is attached to any of the three.	Advanced
Gambia	A monitoring framework for the 2021 Act was validated in February 2026, five years after enactment. Full record The Persons with Disabilities Act 2021 enacts the rights framework and an advisory council; the printing held here leaves the commencement date blank. Oversight arrived in February 2026, when the human rights commission validated a monitoring framework for its implementation. Digital access specifically is visible only as a donation: 15 screen-reader-equipped computers to the school for the blind in October 2025. No disability-disaggregated access data is published.	Advanced
Ghana	Two assistive devices are in pilot with a disability association at a target price of about GH¢2,000 and a 1,500-user target within a year. Full record The devices are smart glasses and an ultrasonic obstacle detector, developed from a prototype that came out of a 2024 hackathon (pilot). It is the only disability-specific digital provision the base holds, and no accessibility standard, procurement requirement or service-design rule applies to any government platform on the record.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Guinea-Bissau	An agency delivered mobility and computing equipment to the national disability federation for data advocacy. Full record The delivery of February 2026 — wheelchairs, crutches and a computing kit to the national disability federation for data advocacy — is the only disability-related digital record the base holds for Guinea-Bissau. No disability statute, accessibility standard or disability-disaggregated access figure appears anywhere in the file.	Advanced
Kenya	The 2025 disability statute is in force setting no artificial-intelligence accessibility standards and no enforcement mechanism. Full record The gap is named in an academic analysis rather than by the regulator (analysis). It matters against what this ledger records elsewhere: automated decisioning is running on the country's largest payments rail, three draft guidance notes read the data statute onto the technology, and none of them carries an accessibility requirement.	No change
Lesotho	An accessible digital library and insight centre was announced in March 2026, under a statute in force since 2021. Full record 2021-03-12 — the Persons with Disability Equity Act establishes the advisory council and accessible-communication duties. 2025-10-15 — the UN resident coordinator called for accessible technology investment at the country's first disability accessibility conference. 2026-03-16 — a memorandum with the incumbent operator announced a 4G-enabled digital library and insight centre carrying assistive technologies. Five years after the Act, the base holds no accessibility standard for public digital services and no compliance assessment against the statute's communication duties.	Advanced
Liberia	A 2026-2030 commission plan proposes a research and data department; the first treaty review closed in May 2026. Full record The published statistical baseline is the 2022 census thematic report, which puts functional-difficulty prevalence at 534,316 people, disaggregated by sex, age, residence and county. It is a statistical output, not an administrative register, and no national disability register has been shown to exist. The National Commission on Disabilities launched a 2026-2030 plan proposing a research and data management department, a sign language and braille education department and a monitoring framework. The treaty body concluded Liberia's first review in May 2026, recording that no replies to the list of issues were submitted and that the state did not attend the dialogue despite saying it would.	Advanced
Libya	The digital accessibility policy moved from plan to mandatory compliance in February 2026. Full record The statutory frame is old and analogue: the 1987 disability law imposes shelter, access and financial-aid duties and carries no digital-accessibility mandate. The information authority launched the implementation path of the national digital accessibility policy with regional commission support in February 2026, moving it from plan to compulsory compliance. Market provision is thin and specific: an operator halved data pricing on a line restricted to certified deaf and hard-of-hearing users.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Madagascar	The governing instrument is a 1998 law that predates digital service delivery and carries no accessibility duty. Full record The law on persons with disabilities was promulgated in February 1998 after adoption by the National Assembly in December 1997 (law). The seventh multiple indicator cluster survey, released in 2026, carries the sustainable development indicator framework under which disability disaggregation would be reported (survey). What the base does not hold is any accessibility standard for public digital services, any assistive-technology programme, or any disaggregated figure for digital access by disability. The 1998 law is the whole of the legal position.	No change
Malawi	A national policy launched in August 2025 and the 2026-27 budget put 2.0 billion kwacha behind it. Full record The statute commenced on 5 April 2024 by Government Notice 18 of 2024; no implementing regulation, accessibility standard or digital-accessibility requirement under it is on file. 2025-08 - a national disability policy was launched to replace the 2006 policy and run to 2030, aligned to the disability rights convention. 2026-02 - the budget statement allocated 2.0 billion kwacha to the disability trust fund, 250 million of it as direct grants, and removed taxes on supportive devices including adapted vehicles, prosthetic limbs and hearing aids. 2026-08 - a digital-skills programme at the school of government is taught by master trainers who are themselves visually impaired, the constituency teaching rather than being spoken for.	Advanced
Mauritius	A disability pension reform was agreed in Cabinet in November 2025 and carried into the 2026-2027 budget. Full record The Protection and Promotion of the Rights of Persons with Disabilities Act 2024 is the governing instrument (Act). Cabinet agreed a disability pension reform in November 2025 (Cabinet), carried into the 2026-2027 budget in June (budget). The 2024 Act carries no accessibility duty for public digital services, and none is held elsewhere. The movement is on income support rather than on access to the systems the state now runs online.	Advanced
Morocco	The census analysis counts 1.73m disabled Moroccans, 67.7 per cent with no schooling. Full record The analysis of the 2024 census published in March 2026 is the country's current disability baseline: 1.73m people, and 67.7 per cent of them with no schooling — an education gap that precedes any question of digital access. Measurement is being deepened with a third national disability survey launched in January 2026, and the one concrete access measure in the window is transport: a permanent 50 per cent rail fare reduction for disability card holders and their guides.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Mozambique	Law 10/2024 sets disability rights including accessible information and disaggregated statistics, and a 2026 regulation created a free identification card as proof of status. Full record 2026-04-14 — the Council of Ministers approved the regulation implementing the 2024 statute, creating a free personal disability-identification card issued by the health ministry as official proof of status for access to services and benefits. It converts a statute into an administrative-access mechanism, which is the movement that matters here. 2025-11-05 — the health ministry and partners published a standard operating manual for making sexual and reproductive health and gender-based violence services accessible to persons with disabilities, with accessibility checklists, referral pathways, provider training and monitoring. The frame is the 2024 statute, covering priority public-service treatment, accessible information, health, education, employment, transport, building accessibility and disaggregation of statistics. No card issuance figure, accessibility audit or disaggregated statistical series is yet published.	Advanced, the 2024 statute gained the administrative mechanism that makes it usable
Namibia	A national disability policy committing to accessible ICT came into operation in October 2025, and a sign language app launched in September. Full record The policy for 2025 to 2030 was gazetted by substitution into the Schedule of the National Disability Council Act and came into operation on 14 October 2025, committing to accessible information and communications technology, information and electronic government services (policy). The national association of the deaf launched a sign language learning application for both mobile platforms in September 2025 (application). Of the five national statistics standards issued in September 2025, one is a leave no one behind standard (standards). No accessibility audit of a government service, and no figure for digital access among persons with disabilities, is held. A commitment to accessible electronic government sits against 31 online services.	Advanced
Nigeria	A four-and-a-half-year programme for young people with disabilities opened in Lagos, while none of eight public websites audited in May 2026 met baseline accessibility. Full record The programme is run by a disability-rights organisation with a philanthropic foundation to expand employment access through digital skills, entrepreneurship and inclusive employment pathways, opened with the state disability office's stated support (programme). No budget, participant target or state-government commitment beyond stated support is published. It is the only disability-specific digital programme in the base for the country. 2026-08-31 — none of eight public websites audited in May 2026, among them the admissions board, the identity commission, the revenue service and the disability commission itself, had baseline accessibility features. An earlier assessment of all 36 states and the Federal Capital Territory found 26 non-compliant with the agency's website guidelines and 14 sites unusable for people with disabilities — different samples, not a series. The guidelines are in force and the web design standards meant to make them buildable published no toolkit a year on, while the regulator ran a fourth assistive-technology hackathon in Abuja on 26 and 27 August 2026 — the assistive half of the problem, not the accessibility half. An estimated 35 million Nigerians are persons with disabilities.	Mixed, a disability-specific programme opened while the accessibility standard stalled and no audited public website met a baseline

COUNTRY	DEVELOPMENTS	PROGRESS
Rwanda	A first dedicated disability cash-transfer pilot began in March 2026, under a policy whose strategic plan ran to 2024. Full record The national policy and its four-year strategic plan covered 2021 to 2024 (policy); the plan has run its term and no successor is held. Local leaders were trained on 25 and 26 March 2026 to deliver the country's first dedicated disability cash-transfer pilot under the flagship social protection programme (training). A second national dialogue on special needs and inclusive education produced a three-point government commitment (dialogue). Financial inclusion of adults with disabilities is separately tracked on the ledger.	Advanced
Senegal	An advanced-level digital course for blind and partially sighted people launched in July 2026, with no start date for the programme and no funding figure or state role reported. Full record The advanced course launched on 6 July 2026 (course). The programme's start date is not stated, so the cumulative figure it reports has no start point, and no funding figure or state role is reported. It is the only disability-specific digital instrument in this ledger.	Advanced
Somalia	A diaspora pilot distributed adapted speaking phones to blind people in Mogadishu; no public accessibility standard is held. Full record The pilot distributed individually adapted speaking mobile phones to blind people in Mogadishu, to support digital inclusion, independent communication and access to mobile banking (project). It is a diaspora-run pilot rather than a government programme, and no count beyond the pilot is published. The digital inclusion policy finalised in August 2025 is the one national instrument addressing marginalised groups' access to ICT services (policy). Nothing sets an accessibility requirement for a public digital service.	Advanced
South Africa	A seven-point plan on disability-inclusive data, universal design and AI-enabled assistive technology was agreed on 12 August 2026, anchored in a proposed centre of excellence. Full record 2026-08-12 — a seven-point plan was agreed with a bilateral partner to deepen cooperation on disability-inclusive data, universal design and artificial-intelligence-enabled assistive technology, anchored in a proposed disability centre of excellence working with the national statistics office. No instrument, funding, timetable or data-sharing arrangement is published for cooperation that names the national statistics office as a partner, which is the gap worth naming: an agreement about disability data with a foreign partner, and no domestic statement of what data would be collected, held or shared. It is also the only disability-related digital instrument on this ledger.	Advanced
Sudan	A national strategy for 2026 to 2030 was issued in December 2025, calling for accessible communication including digital channels. Full record The strategy, issued by the human resources ministry and the national disability council, identifies the 2017 disability act and the national council as the existing legal and institutional basis, situates itself against the 2021 to 2030 national disability strategy, and calls for disability-inclusive service delivery and accessible communication including digital and social media (strategy). Organisations of persons with disabilities took part in the community consultation informing the 2026 response plan (chapter), and almost 20 of the mechanism's 150-plus community champions have disabilities (chapter). No accessibility standard for public digital services is held.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Tanzania	The central bank launched braille editions of its publications in August 2026. Full record No print run, distribution channel or digital-accessibility counterpart is published (braille). Braille editions of financial publications are the only disability-specific measure in this ledger, and the absence of a digital-accessibility counterpart is worth noting in a unit whose financial system is overwhelmingly mobile.	Advanced
Uganda	An ICT hub for persons with disabilities was commissioned in August 2026 with no commitment value published, and information technology training for youth with disabilities recorded a disbursement for 2025. Full record The hub was commissioned with no commitment value published, so the base carries no finance record for it (hub, commissioning). The training record is a commitment rather than a delivery report, with no trainee count, curriculum or outcome stated (training). Two disability-specific instruments, neither with a published outcome, is more than most units in this frame hold and still not a measurable programme.	Advanced
Zambia	A national policy replaced the 2015 one and a constitutional amendment reserved seats for persons with disabilities. Full record 2025-05 — a national policy on persons with disabilities replaced the 2015 policy. 2025-08 — a disability inclusive service site assessment tool was validated with the health ministry and partners, a measurement instrument rather than a statement of intent. 2025-12 — a constitutional amendment reserved National Assembly and council seats for persons with disabilities. Policy, a measuring tool and reserved representation in seven months is real movement. Nothing in the base addresses digital accessibility specifically: no website standard, no assistive-technology provision figure and no disaggregated access measure is held.	Advanced
Zimbabwe	A Persons with Disabilities Act was passed in November 2025 and awaits commencement; two training programmes ran in 2026. Full record A three-month project on accessible digital civic participation for blind communities was launched in Bulawayo (launch). The Act repeals the Disabled Persons Act and establishes a National Disability Affairs Board; its definition of communication expressly takes in Braille, tactile communication, large print, accessible multimedia and accessible information and communication technology, and it carries a universal design standard covering equipment, facilities, programmes and services (Act). It comes into operation on a date to be fixed by the President, and no commencement notice is held. Librarians from more than 22 state universities were trained on assistive technologies over two days in June 2026, the devices, software and inclusive furniture funded by a US\$220,000 grant secured by the university libraries consortium (workshop). The telecommunications regulator and a civil-society internet chapter trained 35 participants with disabilities from the Lupane, Dete and Binga districts in basic ICT skills (training). No figure for digital access or device ownership among persons with disabilities is published.	Advanced

Inclusion of refugees and IDPs

COUNTRY	DEVELOPMENTS	PROGRESS
Botswana	The Refugees (Recognition and Management) Act commenced on 1 November 2025, replacing the 1968 framework. Full record 2026-03-01 — the minister confirmed commencing the Act on 1 November 2025, its provisions aligned to protection of refugees' family members. 2026-06-22 — 64 long-term refugees were granted citizenship on World Refugee Day, meeting a Global Refugee Forum commitment. 2026-04-03 — flooding in the Palapye sub-district between 15 and 19 March 2026 displaced people and cut access to services. No framework for internally displaced people is held, and no figure for registered refugees is published.	Advanced
Burundi	Level-2 biometric registration of 54,343 Congolese refugees was completed at one site, and cash transfers reached refugees over their own phones. Full record Asylum claims are recorded in an international agency database and claimants enrolled with fingerprint and iris biometrics, with a refugee identity card issued under the 2021 migration law — a registration system operated jointly by the national office and the agency. 2025-09 — a cash-transfer programme run by government, the World Bank and the food agency closed in one province after two years, having paid 73,600 BIF every two months over recipients' own mobile phones. 2026-07-06 — level-2 biometric registration of 54,343 Congolese refugees was completed at one site, stated as strengthening protection, improving data quality and better targeting assistance. The refugee population is more completely biometrically enrolled than the citizen population, which is the structural fact this indicator keeps recording.	Advanced
Central African Republic	37,389 Sudanese refugees are registered with card-based registration and a complaints system recording 535 complaints. Full record 2026-08-19 - an operational update for the second quarter of 2026 records 37,389 registered Sudanese refugees, card-based registration, and a complaints and feedback system recording 535 complaints. It is the clearest instance the base holds of a digital feedback channel reaching a displaced population, and it is run by an agency rather than by the state. A national statistics initiative would count them: an effort under way since September 2025 would include, for the first time, forcibly displaced people and those at risk of statelessness - about 447,000 internally displaced and some 62,000 refugees - in national statistics.	Advanced
Chad	A memorandum on secure identity for vulnerable populations was signed with a migration organisation, and more than 4,000 refugee identity numbers have been issued in a pilot. Full record The memorandum was signed in May 2026 (memorandum). The refugee pilot is lender-funded with the refugee agency and the national refugee commission, on a French supplier's technology (pilot, identities). A refugee digital learning centre was inaugurated at a one-stop shop in the east with Italian funding, and no cohort numbers are held at either end (centre). Biometric enrolment of displaced people, again with no protection statute behind it, is the largest inclusion activity in this ledger.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Comoros	Seventeen asylum-seekers and seven refugees were registered at 30 November 2025; no national asylum system exists. Full record 2025-11 - the regional protection dashboard records the Comoros holding seventeen asylum-seekers and seven refugees, twenty-four people, out of a regional total of 197,509 across seven countries - the smallest caseload of the seven, and a first count with no earlier figure behind it. 2026-01 - a senior protection officer's mission to Moroni and Anjouan in December 2025 assessed the national response to mixed movements, identified gaps in policy, legal frameworks and operational capacity, recommended the government organise referral pathways and humanitarian assistance delivery, and noted the absence of a national asylum system. Registration in the country runs under the agency's own mandate. Nothing on file gives a refugee a digital identity, a registration route or access to any government service.	No change, twenty-four people registered and no national asylum system behind them
Cote d'Ivoire	93,200 refugees and asylum seekers were recorded at June 2026, with registration yielding attestations that serve as proof of identity and documentation gaps a stated protection challenge. Full record The statutory basis is in force: on recognition of status a biometric refugee identity card is issued after inscription in the national register of natural persons and serves as residence title, civil-status documents are issued on the same terms as for nationals, and communication of identifying data to the country of origin is forbidden except for travel documents when executing an expulsion; the national organ the law creates awaits its decree. 2026-06 - 93,200 refugees and asylum seekers, about 82,254 of them from Burkina Faso, against 930,958 stateless; 3,619 new arrivals in 684 households registered in the north between April and June 2026, with continuous registration entering refugees in the national refugee database and yielding attestations serving as proof of identity, while cost and travel barriers to civil registry offices limit birth registration and so school enrolment. A profiling of 4,209 newly registered asylum seekers found over 90% of adults without schooling and high financial exclusion.	Advanced
Djibouti	Displaced people were brought into the national household survey through a boosted sample with displacement modules. Full record 2025-09-08 - refugees, migrants and undocumented residents were included in the national household survey through a boosted sample and a questionnaire carrying modules on migration history, access to services, livelihood barriers and integration, with technical assistance to the statistics institute and anonymised microdata planned for release. 2026-05-19 - a technical facility was appraised to improve refugees' and host communities' access to affordable financial services and financial literacy; nothing confirms disbursement or launch. The social registry's founding decree was amended in 2020 with provisions to facilitate refugees' inclusion; no count of refugees registered is published.	Advanced
DR Congo	Fizi Territory has been off calls, SMS and internet since 3 July 2026, and soldiers seized four broadcasters' satellite kits. Full record At the window's opening one territory centre was off all networks because generator fuel could not reach tower sites, with other eastern areas reconnected in February 2026. 2026-07-03 - Fizi Territory including Baraka went off calls, SMS and internet and was still cut more than six weeks later amid fighting; soldiers seized the satellite kits of four community broadcasters on 8 July, telling journalists the equipment would be returned only when the war ended, and some outlets have suspended news bulletins, an account given from Baraka itself. No licensing or administrative decision for occupied territory is held, and no restoration date is stated.	Regressed

COUNTRY	DEVELOPMENTS	PROGRESS
Egypt	The executive regulations of the asylum law were issued by decree, taking effect three months after publication. Full record 2026-05-21 - the executive regulations of the foreigners asylum law were issued by decree, published in the official gazette and taking effect three months after publication. The held text states no registration procedure, documentation standard or service-access provision bearing on digital systems, so what the regulations mean for a refugee's access to identity or services cannot be stated from them. No refugee or displaced population figure, no registration count and no service-access measure appears anywhere else on this ledger either.	No change, a first stated position with no earlier account behind it
Equatorial Guinea	The refugee agency records no domestic refugee status law despite treaty accession. Full record The agency's rights mapping sets out the position: Equatorial Guinea has acceded to the refugee treaties and has enacted no domestic status determination law. Without a status procedure there is no registration or documentation system to assess, and no refugee population figure appears in the base for the country.	No change
Eswatini	77 machine-readable travel documents were dispatched to refugees between April and June 2026, on a statute in force since 2018. Full record The Refugees Act of 2017, commenced in November 2018, provides for the recognition, protection and control of refugees and establishes the commissioner for refugees (Act). The refugee department received 82 applications for machine-readable convention travel documents in the first quarter of 2026/27 and dispatched 77, alongside 70 refugee status permits (quarterly figures). A regional refugee-agency report names the country among those incorporating refugees and asylum-seekers into national civil registration and documentation systems (report). The documents are machine-readable, which is the only digital property the base records of them. No refugee population figure, and no statement of refugee access to any other digital public service, is held.	Advanced
Ethiopia	A refugee-inclusion framework covering 1.1m refugees and 2m displaced people makes the national identity central to a state-led model. Full record The framework adopted in July 2026 puts the national identity at the centre of a state-led inclusion model covering 1.1m refugees and 2m internally displaced people (inclusion framework). The lender's March 2026 mission records about 190,000 refugee registrations against 170,000 identity issuances (aide-memoire). Neither figure is broken down by camp, region or status, and the base holds nothing on what services a refugee holding the identity can actually reach.	Advanced
Gambia	4,214 refugees and 552 others of concern at 31 May 2026; the 2008 Act provides for cards with no issuance count. Full record The Refugee Act 2008 constitutes the refugee commission and provides for status determination, refugee identity cards and travel documents. The 2020-2030 migration policy names it as the operative instrument for refugees, displaced people and statelessness. The population is small and counted — 4,214 refugees and 552 others of concern at 31 May 2026 — and the base holds no figure for cards issued or for refugee enrolment in the national identity system. The state validated its second migration progress report in May 2026.	No change

COUNTRY	DEVELOPMENTS	PROGRESS
Ghana	Refugee registration appears as a line in the identity authority's fee schedule; no refugee population or registration figure is held. Full record The identity authority's fee schedule carries refugee registration as its own line, alongside the foreigner identity system and separate regional, continental and rest-of-world tiers - the clearest statement the base holds that refugees are inside the identity system at all. 2026-08-25 - a European Union-funded action on birth registration and legal identity pairs the births registry with the health service in six low-coverage regions, framed around refugee protection as well as registration gaps. No refugee or displaced population figure, no registration count and no service-access measure appears anywhere on this ledger, so the position is that the systems name this group and the base cannot say how many of them the systems reach.	No change, a fee line and a registration action with no population figure behind them
Guinea-Bissau	32 refugees and 37 returnees recorded at 31 May 2026. Full record The agency's operational data records 32 refugees and 37 returnees for Guinea-Bissau at 31 May 2026. The population is small enough that no dedicated registration, documentation or service system is described for it, and none appears in the base.	No change
Kenya	A GBP 2.3m programme across eight arid-lands counties including two refugee-hosting counties passed its March 2026 completion date with no report held. Full record Activities were to start in late 2025 (programme). Against it, American-funded inclusion and connectivity programming including work in remote counties slowed or stopped after the 2025 wind-down, with no replacement funder named (withdrawal).	Regressed
Lesotho	Biometric registration for refugees has run since 2018 on a separate system, with no stated pathway into the mainstream one. Full record 2018-10-11 — a biometric registration system for refugees and forcibly displaced people was handed to government. 2026-02-26 — the 2026 identity work plan advances the mainstream platform and states no refugee or displaced-person inclusion pathway. Two identity systems run in parallel and the newer one is being built without a route from the older. No count of registered refugees is published.	No change
Liberia	A March 2026 memorandum enrolls eligible refugees in the national biometric system and issues specialised refugee cards. Full record The Refugee Act 1993 already entitled every recognised refugee to a prescribed identity card and empowered officers to take fingerprints, palm-prints and photographs, so biometric refugee identity is not new in law. What is new is the connection to the national register: a memorandum under Executive Orders 144 and 147 has the refugee commission screen and validate integrated Ivorian and other eligible refugees while the identity registry enrolls them and issues specialised biometric refugee cards. In June 2026 Executive Order 159 rebranded the commission and extended its mandate to statelessness, deportees, returnees, displaced persons and migration governance.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Libya	Registered foreign residents were opened to electronic wallets in March 2026, on lower transfer limits. Full record Registration itself is the agency's rather than the state's: 44,223 refugees registered on the agency's own system with biometric enrolment deployed from August 2020. Financial access moved in the window. The central bank opened electronic wallets to Libya's registered foreign residents with lower daily transfer categories in March 2026, and a commercial bank launched the first such wallet, requiring no bank account. Both reach the base through press reporting rather than a published circular.	Advanced
Madagascar	A rights mapping entry records a refugee reform bill and a pledged office; no digital service for displaced people is held. Full record The rights mapping entry records a reform bill scheduled for a vote in 2025 and a pledge to establish a dedicated office by the same year (entry). The page carries no publication date of its own; its year is inferred from those forward references, so the position it states may already have moved. No registration system, identity credential, cash transfer mechanism or service portal for refugees or internally displaced people is held, and the social registry's coverage of displaced households is not stated anywhere in the base.	No change, a single undated entry with nothing behind it
Malawi	Dzaleka camp was included in the 2024 demographic and health survey; floods displaced 6,155 households. Full record The governing statute is from 1989: it establishes the refugee committee, status-determination procedures and non-refoulement protection, carries no provision on registration data, identity documents or access to digital services, and awaits a reform nothing on file dates. 2026-03 - the floods of January to March affected 69,088 households, 310,896 people, with 6,155 households displaced into 84 camps and a 10 million US dollar appeal for restoring basic services. No digital registration or service-access figure attaches to any of it. 2026-07 - the refugee camp was included in the 2024 demographic and health survey, the first systematic comparison of refugee indicators against national averages. Inclusion in a survey is not inclusion in a service.	Mixed, refugee data entered the national survey while 6,155 households were displaced by floods
Mauritius	A treaty body's concluding observations are the only account on file; no digital service for displaced people is recorded. Full record The racial discrimination committee's concluding observations of May 2025 are the whole of what the base holds on the question (observations). No refugee or statelessness framework, registration system, identity credential or service portal is recorded. The absence is dated and searched. What would settle it is a framework instrument, or any digital service the base can show reaching displaced people.	No change, a searched absence with one treaty-body account behind it
Morocco	18,900 refugees registered at the end of 2024; no digital service route for them is described. Full record The refugee agency records 18,900 refugees registered at the end of 2024, and the census counted 148,152 foreign residents, up 76 per cent since 2014. Neither source describes how either population reaches Moroccan digital services. The identity credential that carries service access is a national one, and no equivalent for non-nationals appears in the base.	No change

COUNTRY	DEVELOPMENTS	PROGRESS
Mozambique	About 392,000 people were newly displaced by floods in early 2026 on top of conflict displacement, and a US\$6.9m partnership is restoring civil documentation in Cabo Delgado. Full record 2026-01-30 — the refugee agency recorded about 392,000 people newly displaced by floods, on top of more than 300,000 displaced by conflict in the second half of 2025, with about 100,000 sheltering in around 100 overcrowded temporary centres lacking privacy, lighting and basic services, and elderly people and persons with disabilities struggling to access assistance, and states a 2026 country requirement of US\$38.2m. 2026-03-03 — a US\$6.9m partnership with Japan was signed for 2026-2028 to rehabilitate 27 government service points, train 300 officials and deliver mobile civil-documentation and legal aid to about 100,000 displaced and returnee people in Cabo Delgado, restoring the legal identity that gates health, education, justice and social assistance. The policy frame is the internal displacement management policy approved in 2021, covering prevention, protection, response and reintegration under the disaster management institute. Documentation is the digital dimension of this indicator, and it is being restored by a donor project rather than by the register itself.	Regressed, displacement rose sharply against a standing policy framework and a documentation gap the response is still closing
Namibia	682 refugee identity cards were issued in 2025, and cash assistance through mobile money reached about 6,000 people in 2025. Full record Issuance of refugee cards began in June 2024 and 682 were issued in calendar 2025 (cards, system). Cash assistance through mobile money launched in February 2025 for about 6,000 individuals in over 1,000 households, with the agency reporting it held 40 per cent of the resources needed and no record since (assistance).	Advanced
Nigeria	The 2022 Act founding the refugees, migrants and displaced persons commission is the standing legal basis, and its full text is now held. Full record The Act is the founding statute for the national institution responsible for refugees, migrants and internally displaced persons and the operative legal basis for their inclusion in public services. The full text puts a registry function in statute: the Commission is to register and personally document persons of concern, and support state governments to create and maintain updated registers of them. No registration, identification or service-access figure under those functions is published, and no register is named as operating.	No change
Rwanda	A joint country action plan signed in August 2025 mainstreams refugee needs into national energy, water, transport, education and finance systems. Full record The refugees law enacted in April 2024 governs refugee status and applications, repealing the 2014 statute (law). The joint country action plan for 2025 to 2027, signed on 25 August 2025, mainstreams refugee needs into national energy, water, transport, education and finance systems (plan). No commitment amount is stated anywhere in it — the plan names sectors and intentions — so it carries no financing record. Whether the national digital systems those sectors run on admit refugee identities is not addressed.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Somalia	The Act for Internally Displaced People came into force in December 2025, and an identity registration initiative for displaced people launched in June 2026. Full record The Act, signed on 4 December 2025 and gazetted on 21 December, affirms equal access to public services and legal documentation, prohibits a separate discriminatory legal status for displaced people, creates a sixteen-ministry technical committee and earmarks at least 3 per cent of the national budget (analysis, bulletin). It replaces a 2019 policy that had established equal access to civil documentation and cautioned against blanket registration (policy). A registration initiative launched in June 2026 to give displaced people the national identity card and equal-basis service access (launch).	Advanced
South Africa	A bill would extend employment services to foreign nationals, refugees and asylum seekers, with work-authorisation verification. Full record 2026-05-29 — a bill was published extending the statutory employment-services framework to foreign nationals, refugees and asylum seekers, creating work-authorisation verification and requiring a framework for collecting information on their recruitment and employment, against the standing refugees statute of 1998. The verification duty is the part that touches this report: it would run against the identity layer, and nothing states how a person without a South African identity number is verified, or what record is kept of the check. It is a bill. No enactment, commencement or implementing system appears, and the white paper reported under digital identity carries the same population without stating how they are registered.	Advanced
South Sudan	Large-scale biometric registration and re-registration of displaced people ran from April to June 2026, with no data-controller arrangement or retention rule stated. Full record The exercise is a humanitarian registration rather than a state system (registration, feedback). No data-controller arrangement, retention rule, consent record or relationship to the national identity system is stated. It is the largest biometric collection in this ledger and the one furthest outside any legal framework, in a country with no data-protection statute.	Advanced
Sudan	7.9 million beneficiaries in 2024 including 3.4 million displaced people, and a refugee-facing site in Egypt that became the most visited country site worldwide. Full record The 2024 country report records 7,911,328 beneficiaries including 3,432,876 internally displaced people and 879,777 refugees, with more than 1.7 million reached through cash-based transfers worth USD 53.8 million, and a business-to-business distribution model piloted for over 135,000 people in access-constrained locations (report). Sudanese refugees are now over three-quarters of the roughly 1.1 million registered in Egypt, a fourteen-fold rise since 2023, served through digital channels: 12.8 million views on one platform and 3.4 million on the help website in 2025 (fact sheet). A digital learning centre in eastern Chad offers training to up to 400 learners (release).	Advanced
Zambia	Transfer of the refugee registration database to the home affairs ministry is provided for as a project subcomponent, and two project documents give different card counts and values. Full record The safeguards framework gives US\$6.5m and about 100,000 cards against the appraisal document's US\$6m and about 150,000 (transfer); the divergence is recorded, not resolved (transfer, framework, engagement). The parent project became effective in December 2024, and no disbursement figure, enrolment count or implementation progress within the window is held (project, plans). Moving a refugee database from an international agency to a ministry is a change of controller, and the country's data-protection regulator has no recorded action of any kind.	No change

COUNTRY	DEVELOPMENTS	PROGRESS
Zimbabwe	A community radio station launched in the Tongogara refugee settlement in February 2026, reaching an estimated 25,000 to 40,000 listeners. Full record A digital education partnership between the refugee agency and a foundation has run in four schools in Zimbabwe since 2022, benefiting 5,280 primary students and 109 teachers (partnership). No later figure is held. A community radio station broadcasting from the Tongogara refugee settlement launched in February 2026 and reaches an estimated 25,000 to 40,000 listeners including surrounding host communities (station). Before it, residents had limited access to timely information and poor radio reception. Laptops handed to the first cohort of a technical and vocational bursary programme in July 2026 went to 192 participants, the cohort including 13 refugees and 10 persons with disabilities (handover). All three are donor or partner programmes. Nothing on the base records a government policy or service that treats refugees and internally displaced people as a distinct group for digital access.	Advanced

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
