

MONTHLY UPDATE

Guinea-Bissau: monthly update, August – September 2026

Edition of 2026-09-04 · 3 systems and instruments tracked

Developments summarised from sources published between the beginning of last month and today.

SUMMARY OF THE MONTH · GOVERNANCE · DPI

Summary of the month

Two rows moved, one of them a decree that had been waiting a year. On 8 August the government [approved a national interoperability regulation](#), the first movement on a draft the Council of Ministers had approved in July 2025; the announcement came from the regional programme that funds the work rather than from a gazette, and names no decree number or entry into force. Ahead of the 30 August referendum the electoral support office [handed the elections commission an updated register of 966,152 voters, unchanged from the last update](#), having [issued 25,146 replacement voter cards in a 30-day operation to 11 August](#). The month's registry work was replacing credentials rather than adding registrants.

Governance

Strategies, plans and policies

The national digitalisation programme [launched nationally in August, at US\\$60m, covering connectivity, data protection, the digital economy and electronic government](#). It is the delivery vehicle the 2025-2030 strategy has lacked, and it arrives with a fund plan behind it: the [2026-2031 strategic and financing plan for the universal access fund](#), delivered in May after a review recommended restructuring the fund itself.

DPI

Data Exchange

[The government approved a national interoperability regulation](#), announced on 8 August 2026 by the World Bank-backed Western Africa Regional Digital Integration Program, which supports the work and presents the framework as Guinea-Bissau's contribution to the regional programme. A draft decree on the interoperability of public and private digital systems had been approved by the Council of Ministers on 10 July 2025 and had not moved since; the announcement names no decree number, no gazettal and no entry-into-force date, and the paired data-governance and cybersecurity decrees approved alongside it in 2025 remain where they were.

Registries

The register moved without the electorate changing. The electoral support office [handed the updated register to the elections commission in physical and electronic form for the 30 August referendum, recording 966,152 registered voters — unchanged from the last update](#), having also [issued 25,146 replacement voter cards in a 30-day nationwide operation from 13 July to 11 August through 51 brigades covering every region](#). So the month's work was replacing credentials rather than adding registrants, and no audit or de-duplication statement accompanies the handover.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
