

MONTHLY UPDATE

Cape Verde: monthly update, July 2026

Edition of 2026-08-06 · 9 systems and instruments tracked, 45 of them not held

Developments recorded from artefacts published between 2026-07-01 and 2026-08-06 – July 2026 carried forward to the date of issue, so the report holds the nightly catch to the day it was cut. Sections follow the status report.

Summary of the month

The month's substance was fiscal and statistical rather than technical. Parliament approved a rectificative budget for 2026 on 31 July at CVE 103,888 million, against the CVE 95,675 million it had voted, naming connectivity among the priorities of the reorganisation without giving a digital figure. On the same day the Prime Minister told Parliament that the national statistics institute had produced falsified data and ordered an independent evaluation of it; the institute's board rejected the allegations three days later and offered to host any external review ([both accounts](#)).

One system entered service: a national pharmaceutical market monitoring platform launched on 29 July, tracking the medicines circuit in real time and integrated with the customs system.

Infrastructure

No new connectivity measurement was published in the window, and the regulator's market series still stops at the second quarter of 2025 ([regulator indicators](#)).

The continental frame moved instead. On 24 July 2026 the African Union development agency launched a Programme for African Developing Island Economies at a ministerial segment in Abidjan, covering Cape Verde and six other island states on a 2026-2031 roadmap organised on six pillars including connectivity, with digital public infrastructure and artificial intelligence named as accelerators. No Cape Verde-specific commitment, allocation or project is named in it.

Digital public infrastructure

The independent health regulator launched a pharmaceutical market monitoring system on 29 July 2026, tracking the national medicines circuit in real time, forecasting stock-outs and triggering replenishment or redistribution across the archipelago, and integrated with the customs system to detect illegal imports. The regulator states it will support development of electronic prescribing and feed its medicines-authorisation function. No cost, vendor, coverage figure or baseline stock-out rate was published, and the wiki holds no first-party document for it, only a wire report a week after launch.

The statistical record produced the month's other development, and it was an absence made public. The World Bank presented a poverty estimate in Praia on 14 July microsimulated from the 2015 household survey, because the survey fielded from December 2022 has published no definitive results more than three years on. The statistics institute has stated that an under-reporting of food expenditure was identified and corrected and that a new fully digital survey was planned for July 2026; no source records that survey starting.

Governance and regulation

The Prime Minister told Parliament during the State of the Nation debate on 31 July 2026 that the statistics institute had produced falsified data, and announced an independent evaluation to establish alleged interference and manipulation. On 3 August the institute's board rejected the allegations clearly, firmly and categorically, and said it was available to receive any external evaluation mission or peer review, undertaking to supply all technical documentation ([both accounts](#)). Nothing is established about the evaluation's terms of reference, who conducts it, when it reports, or whether its findings will be published. The dispute is not new — anonymous technicians raised it in August 2025 and the institute rejected it in September 2025 — and the two accounts remain unreconciled.

Parliament approved the rectificative budget for 2026 on 31 July at CVE 103,888 million against a voted CVE 95,675 million and a projected execution of CVE 104,011 million. It had not appeared in the official gazette at 4 August. Cape Verde passed no rectificative budget for 2025, so that year's revised position was administrative rather than statutory.

Artificial intelligence and the technology sector

The technology park's second phase went to open international tender on 29 July 2026, for supply and installation of facilities equipment and training, procured by the special projects unit in the Ministry of Finance under an African Development Bank loan. Bids close on 15 September 2026, with a bid security of EUR 25,000 and beneficial-ownership disclosure required of the successful bidder. The contract value is not published, so the tender fixes scope and timetable without sizing them.

On 29 July the Prime Minister and Finance Minister received a Huawei delegation, reviewed what the government describes as a strategic ICT partnership and were introduced to a new country representative. No agreement, project, sum or timetable was named; what the account records is access and continuity rather than a transaction. The last dated Chinese technology commitment the wiki holds for Cape Verde closed in 2021.

The Health Minister proposed at a World Health Organization conference in Lisbon on 15 July that Cape Verde serve as a lusophone laboratory for artificial intelligence in health, hosting pilot projects integrating it with telemedicine, and called for cooperation on skills, infrastructure, interoperability and an ethical and regulatory framework. No pilot, partner, budget or instrument follows from it.

Inclusion, capacity and finance

Parliament's approval of the rectificative budget on 31 July 2026 is the window's one appropriation event, and it does not disclose a digital figure. Connectivity is named among the priorities of the reorganisation; the act was not gazetted at 4 August, so the revised organic table that would show whether the digital ministry's reprogrammed position is ratified or reversed is not available.

Nothing else in this section moved. No universal service fund expenditure, project or beneficiary record was published; no enrolment, completion or placement figure was published for the digital-skills programme that opened 1,050 places in January 2026 ([launch account](#)); and disbursement against the African Development Bank's second-phase e-governance programme was still recorded as zero at the most recent data capture ([signature account](#)).

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
