

STATUS REPORT

Tunisia: status report

Edition of 2026-08-11 · 60 systems and instruments tracked, 9 of them not held

Compiled 2026-08-11 from the Data Landscapers source base, from `outputs/reports/TUN/ledger.csv` (60 systems and instruments, 9 of them Not held). Each section opens with its ledger; specific events are covered in the monthly updates. Figures are dated because most are time-varying.

Status values. *Implemented* — in operation or in force. *Piloting* — running with a limited user group or in a controlled environment. *In development* — build or drafting under way, not yet operating. *Planned* — announced or provided for, no build or draft on record. *Enacted* — an instrument passed into law; pair with a qualifying clause for its in-force date. *Under review* — a law or policy currently being reconsidered. *Discontinued* — closed or superseded. *Not held* — the base carries no reliable statement of status; these are the gaps to fill and are listed again at the end.

Summary of position

Tunisia's digital state is more built than it is governed. The mobile identity became [compulsory for investment declarations and for the business register from 1 July 2026](#), a national health identifier [repurposed from the Covid-19 vaccination identifier](#) now joins health, civil-status, social-affairs and education records, and the interoperability platform is [extending from five ministries to the business economy](#). The instrument governing all of that data is still the [2004 organic law](#); its 123-article replacement is in committee.

Connectivity is the strongest leg: three operators on 5G since February 2025, and the [Medusa cable's Bizerte landing in service from 3 June 2026](#).

The state has declared two things it has not done. It has [no adopted artificial-intelligence strategy](#), and [no published allocation for the digital transition](#) in the budget that names it as a structuring axis.

Infrastructure

Connectivity

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
5G commercial service	IMPLEMENTED ↗	All three operators launched within days of each other, February 2025
Medusa submarine cable landing at Bizerte	IMPLEMENTED ↗	Ready for service, 3 June 2026
Starlink satellite service licence	IN DEVELOPMENT, LICENCE WITHHELD ↗	Pre-orders opened February 2026 with no licence issued

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Tunisie Telecom dedicated Medusa fibre pair	IMPLEMENTED ↗	In service with the cable, 3 June 2026

Data Storage

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Data centres as a state investment priority	IN DEVELOPMENT ↗	Carried as a named project line in the development plan annex, June 2026
SoleCrypt Bizerte data centre	PLANNED ↗	Non-binding memorandum with Schneider Electric, February 2026
Sovereign cloud for national health data	PLANNED ↗	Health ministry confirmed an intention to adopt Tunisian cloud solutions, February 2026

Energy

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Renewable power for data-centre capacity	PLANNED ↗	Developer's Tozeur solar site at base-camp stage, November 2025

Technical Capacity

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Domestic technical capacity to operate the national digital estate	NOT HELD	—

Cybersecurity

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
National cybersecurity agency advisory function	IMPLEMENTED ↗	Public advisory on an SMS phishing campaign, 30 July 2026

The Mediterranean position is now a working asset. The [Medusa system's first African landing at Bizerte](#) went into service on [3 June 2026](#), with Orange Tunisia owning and operating the landing station and the roughly 1,050 km Tunisian segment, and Tunisie Telecom [buying a dedicated 20 Tbps pair to Marseille](#) on it. Both operators' publicity claimed the landing; the distinction is between owning international capacity and renting it.

Mobile is broad in coverage and contested in quality. All three operators have run 5G since February 2025, and the regulator's obligations — a 30 Mbps floor on fixed-wireless access with a 50% contractual-speed guarantee — [took fixed-wireless lines from 9,425 at launch to 319,554 by May 2026](#). The same measurement, cited not absorbed, finds the Tunisian 5G median down 30% over six months and the combined 4G and 5G median below the pre-launch baseline.

Hosting is entirely prospective. Data centres are [a named project line in the statutory development plan](#) with no budget, sequencing or delivery agency, and the flagship is a [20 MW facility at Bizerte under a non-binding memorandum](#), to be powered from a 60 MW solar site whose base camp opened in November 2025. The health ministry separately [intends to host national health data on Tunisian cloud](#), with no provider, amount or date. None of it is operating capacity.

The security posture on record is advisory. The national agency's response to a [live campaign harvesting banking data through fake traffic-fine messages](#) was advice and a verification test: government sites use only the national domain. No takedown power or enforcement action appears in the base.

Digital public infrastructure

Data Exchange

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
National interoperability platform (UXP)	IN DEVELOPMENT ↗	Phase 2 contract signed, May 2026

Digital Identity and CRVS

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
e-Houwiya mobile identity	IMPLEMENTED ↗	Made compulsory for investment declarations and business registration from 1 July 2026
National Health Identifier	IN DEVELOPMENT ↗	Confirmed as the repurposed Covid-19 vaccination identifier, 27 July 2026
Issuance of the biometric identity card and passport	NOT HELD	—

Digital Payments and Fintech

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Kashy wallet (Tunisie Telecom)	IMPLEMENTED ↗	Launched by the state operator, March 2026
TUNPAY national payment label	IMPLEMENTED ↗	Launched by the central bank with the national payments operator, May 2026
walletii (Ooredoo Fintech)	PLANNED ↗	Central bank licence awarded, March 2026
Active digital wallet count	NOT HELD	—

Registries (population, land, address, etc.)

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
AMEN social registry	IMPLEMENTED ↗	Over 333,000 households on cash transfers as of December 2023
Digital birth declaration platform	PILOTING ↗	First national platform running at Mongi Slim hospital, 202 births registered
National Business Register digitalisation	IMPLEMENTED ↗	Paper filing discontinued from 1 July 2026 under the finance minister's decree of 12 February 2026
Social housing digital application platform	IN DEVELOPMENT ↗	Completion timetable set at a follow-up meeting, 3 August 2026, with beneficiary-database interconnection still under way

Sectoral management information systems (HMIS, EMIS, etc.)

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Digital hospital project	IN DEVELOPMENT ↗	Carried as a plan project with telemedicine and imaging first

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Sahetna.tn health portal	IN DEVELOPMENT ↗	Technical validation and cybersecurity audit reported complete, 21 July 2026

Other GovTech and e-Gov

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Education platform (tarbia.tn)	IMPLEMENTED ↗	Launched by the education ministry, January 2024
National register of community companies	IMPLEMENTED ↗	Launched at alahlia.tn, 20 July 2026, under decree-law n 3 of 2025
Online business tax registration	IMPLEMENTED ↗	Platform deployed by the tax directorate, announced 4 August 2026
Single administrative services portal	IMPLEMENTED ↗	Reported delivered by end-2025 in the ministerial council's account
Wholesale-markets e-invoicing and traceability programme (SOTUMAG)	PILOTING ↗	Pilot completed at the Moknine wholesale market; official launch at Teboulba set for 15 August 2026

Use of satellite data

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Use of satellite data	NOT HELD	—

From 1 July 2026 the mobile identity is no longer optional. Live since August 2022 and legally equivalent to face-to-face identification, it [stood at 200,000 subscribers as of March 2025](#) with no obligation to hold one; from 1 July both the [investment authority](#) and the [business register](#) made it a condition of access, and no subscriber figure has been published since.

The [national health identifier](#) is the [Covid-19 vaccination identifier](#), repurposed and bound to the identity card, the social security number and school identifiers — a join key across four administrations. Coverage cannot be stated: [over 15,000 numbers issued as at 22 June 2026](#), [over 9,000 patients registered in one region's pilot as at 13 July](#), roughly 100,000 medical files linked by 27 July — three figures at three scopes, with no national count or dashboard published against the ministry's end-2026 pledge.

Registers are digitalising fast and documenting themselves thinly. The [business register discontinued paper filing](#), the [community-companies register went live in July 2026](#) with only 60 of 230 companies created found operating, and [business tax registration moved online in August 2026](#); none names an instrument, retention rule or supervisory authority for the data held. The [AMEN social registry](#) runs the other way: over 333,000 households on cash transfers as of December 2023, not updated since.

The [national TUNPAY label](#) obliges banks, payment institutions and the postal service to carry one identity across wallets and acceptance points, and the market is widening through a telco wallet and a [Gulf-backed fintech licence](#). Volume is real — [8.4m mobile transactions worth TND 1,769m in 2025, up 81%](#) — but only through an aggregator, not the central bank's own bulletin.

A second e-invoicing effort is advancing where the legislated one has stalled: the state wholesale-markets company piloted it at [Moknine](#) and launches at Teboulba on 15 August 2026, with no stated link to the finance ministry's amendment.

Governance and regulation

Legislation and regulation

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Compulsory e-invoicing (Article 53)	IN DEVELOPMENT ↗	Amendment bill 2026/012 debated in joint committee, February 2026
Development Plan 2026-2030 (loi n 2026-16)	IMPLEMENTED ↗	Promulgated 20 July 2026 after adoption by both chambers
Organic Laws 22 and 23 of 2024 on biometric identity	IMPLEMENTED ↗	Adopted by parliament, 6 March 2024

Strategies, plans and policies

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Digital content of the development plan annex	IMPLEMENTED ↗	All three volumes of the annex held, June 2026
Digital Tunisia 2020-2025	DISCONTINUED ↗	Lapsed at term at the end of 2025
National digital transformation vision	IN DEVELOPMENT ↗	Ministerial council placed 192 projects under national follow-up and declared 2026 the launch year

Regional collaboration

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
African Telecommunications Union council seat	IMPLEMENTED ↗	Elected at the 7th Plenipotentiary Conference in Abuja, 24 July 2026
AI Innovation and Technological Solutions Working Group chair (Arab League)	IMPLEMENTED ↗	Elected chair at the Arab Permanent Committee's second inaugural meeting in Tunis, reported 1 August 2026
Algeria-Tunisia telecommunications cooperation	PLANNED ↗	Cooperation announced, June 2026
Triangular startup ecosystem programme with Japan	PLANNED ↗	Minutes of the programme signed, reported 28 July 2026

Data protection

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Draft organic law on personal data protection	IN DEVELOPMENT ↗	Draft opinion reviewed by the Assembly's Rights and Freedoms Committee, February 2026
National authority for personal data protection	IMPLEMENTED ↗	Cited by the replacement bill's sponsors as institutionally limited, February 2026
Organic Law 2004-63 on personal data protection	IMPLEMENTED ↗	Still the governing instrument when the replacement bill entered committee, February 2026
Legal basis for the linked national health dataset	NOT HELD	—

Open data

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Agrifood sector data portal	IMPLEMENTED ↗	Launched 23 July 2026 after a full functional test on 9 July
Aswat Nissa femicide data platform	PLANNED ↗	Launch announced for 12 August 2026, the eve of National Women's Day

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
National public data registry (registre.data.gov.tn)	IMPLEMENTED ↗	Confirmed live and enabling citizen data requests, per the Open Government Partnership's Independent Reporting Mechanism report published 4 August 2026

The governing data-protection instrument is [the organic law of 2004](#), which civil society [describes as unfit for the processing the state now does](#). Its replacement — 123 articles across six titles — was under committee review in February 2026 and has not passed. Its sponsors name the gap: the limited role of the supervisory authority, and the absence of rules for the press, surveillance cameras, algorithms and cross-border transfers. The bill would introduce a data protection officer regime, require public institutions to obtain authorisation for any processing, and move enforcement to financial penalties.

The authority that bill would strengthen is named in none of the year's new data-concentrating systems, and no enforcement action or annual report of its own is held.

The [amendment to the compulsory e-invoicing article](#) records that no unified national e-invoicing system exists and that mass e-invoicing raises serious data-protection issues, and mandates a 30-day ministerial report on readiness before any phased timeline.

[Digital Tunisia 2020-2025 lapsed at term](#) with no extension, repeal or outcomes report held, and its successor is a chapter of the [development plan promulgated on 20 July 2026](#). The [annex is substantial](#) — its sectoral volume mentions digital or digitalisation 414 times and artificial intelligence 119 — but every volume held is marked draft, and whether the promulgated annex differs from the version voted is not established.

The [Open Government Partnership's](#) independent reviewers found the E-Government Unit delivered a working national public data registry, while a formal National Open Data Strategy still awaits government endorsement.

Artificial intelligence and the technology sector

AI

India activities

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Indian digital cooperation with Tunisia	NOT HELD	—

Tunisia has an artificial-intelligence roadmap and no strategy, and the roadmap was not written by the state. The [Livre Blanc published by a diaspora alumni association in August 2026](#) sets a 2030 vision and names the constraints as the absence of large-scale data centres and sovereign compute, brain drain and under-equipped small firms; its prescription is a rationing one, sizing compute investment by measured demand. It was [presented at the Tunisia Global Forum](#) and declared open source, and is posted nowhere the wiki could reach, so its contents are held at press-summary precision.

The sector's exportable asset is its law. The Startup Act is being [circulated to other African states through a triangular programme with Japan](#) — a national statute offered as a replicable model rather than as one country's statute.

The market is a state incumbent under [European modernisation finance](#) and two foreign-group subsidiaries, with [mobile broadband dominant and voice plateauing](#).

Inclusion and capacity

Access to services

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Affordability of digital services	IMPLEMENTED ↗	Regulator's affordability report on international data, July 2026

Training and skills

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Digital skills in the development plan	PLANNED ↗	Named in the plan annex approved by law in July 2026

Tunisia's digital financing is European, and it is two instruments routinely read as one. The [EBRD loan of up to EUR 190m to the state operator](#), announced in January 2026 after board approval in July 2024, is a corporate modernisation programme — a 4G-to-5G upgrade, fibre to 200,000 households, backbone and core work, energy investment, and the operator's connection to the submarine cable. The [landing station itself was built under a separate EUR 9.6m grant](#) inside a EUR 32m project, to a different company, on a different timetable, closing in August 2025. Neither is a cable-financing facility, and neither is the other.

Against that external money there is no domestic figure. The [2027 draft budget names the digital transition as a structuring axis](#) and attaches no allocation, target or programme to it; the [skills commitment in the plan](#) likewise carries no budget or delivery agency.

On affordability the regulator, reporting international union data, [puts the digital basket at 1.53% of gross national income per head, about US\\$5.31 a month](#) — under the two-percent international threshold. That is a reference measurement, not a domestic price series.

Finance

New investments

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
AfDB economic and social reforms grant	DISCONTINUED ↗	Recorded in the bank's own reporting
EBRD loan to Tunisie Telecom	IMPLEMENTED ↗	Publicly announced 16 January 2026, after board approval on 24 July 2024
EU CEF Digital grant for the Tunisian cable segment	IMPLEMENTED ↗	Project period closed 31 August 2025

Domestic budget appropriations and expenditure

SYSTEM OR INSTRUMENT	STATUS ↗ source	AS AT
Budget allocation for the digital transition	NOT HELD	—

(narrative not yet written)

Gaps to fill

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Domestic technical capacity to operate the national digital estate	A staffing plan, skills audit or operations report covering who runs the interoperability platform, the identity layer and the health identifier.	not yet probed
Issuance of the biometric identity card and passport	An interior ministry statement, an issuance figure or a gazette notice. The enabling organic laws passed in March 2024 and use was targeted for the first half of 2025; nothing held states whether issuance has begun.	2026-08-09
Active digital wallet count	The central bank's own payments bulletin. The wiki carries 815,000 for 2025 from an aggregator; reporting attributed directly to the bulletins gives roughly 469,000 at end-2025, a divergence of about a factor of 1.7, and only the aggregator's side is held.	not yet probed
Use of satellite data	An earth-observation programme, a land or agricultural monitoring system, or a national mapping arrangement using satellite imagery.	not yet probed

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Legal basis for the linked national health dataset	A decree, ministerial order or data-sharing instrument stating the basis, retention rule and supervisory authority for a dataset joining health, civil-status, social-affairs and education records. The ministry asserts only that data is stored confidentially and securely.	not yet probed
United States digital cooperation with Tunisia	A bilateral agreement, a financing commitment or a programme document. The only American-linked item held is a satellite operator's unlicensed market entry, carried under connectivity.	not yet probed
National artificial intelligence strategy	An adopted strategy, a cabinet decision or a published roadmap. A national AI strategy was scheduled for 2025 and none is held; the only roadmap of comparable specificity was written by a diaspora association and offered to the state.	not yet probed
Indian digital cooperation with Tunisia	A bilateral memorandum, a line of credit, or a technology cooperation programme document naming Tunisia.	not yet probed
Budget allocation for the digital transition	An appropriation line in the 2027 finance law or the 2026 budget showing what the state spends on the digital programme. The 2027 draft names acceleration of the digital transition as a structuring axis with no allocation, target or named programme attached.	not yet probed

Three are subject areas with nothing on record: use of satellite data, and American and Indian digital cooperation. The other six are questions the record raises and does not answer. Whether the biometric identity card and passport are being issued at all is unestablished two years after the enabling laws. What legal basis governs the linked national health dataset is asserted rather than stated. The count of active digital wallets is carried in two versions differing by roughly a factor of 1.7, and only one side is held. There is no adopted artificial-intelligence strategy against which the year's commitments could be read, and no appropriation line for the digital transition in a budget that names it as a priority.

ABOUT THIS DOCUMENT

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
