

PROGRESS REPORT

Other GovTech and e-Gov: progress report, 2025-09-01 to 2026-09-07

Edition of 2026-09-07 · compiled by Claude Opus from the documents in the Corpus repository

54 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has **No evidence** on it in its own report.

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

The place reports do not share one window; the period above is the range they span.

e-government services

COUNTRY	DEVELOPMENTS	PROGRESS
Algeria	The national portal took vocational-training intake registrations in August 2026, while the interior minister named ministry projects as stalled. Full record The interior minister convened wilaya regulation directors to evaluate the national vehicle-registration information system (evaluation). What the evaluation found is not stated. The portal was launched as a single window in October 2025 alongside an older portal carrying 342 services whose relationship to it is not stated. It had 21 services live at July 2026 with a free helpline from 29 July and six energy services added on 20 August. 2026-08-23 - a sector service was placed on it for the first time, with 82,383 candidates registered by 23 August and the portal's interoperability layer handling identity and personal-data verification. Against that, 2026-08-10 - the interior minister named all-digital vehicle registration and civil-status services among ministry projects that have stalled and are to be accelerated, without saying in what respect or giving a revised timetable; the press describes citizens still attending in person for procedures presented as online and an inspection of one biometric-documents office after complaints of overnight queues and a daily cap on files. 2026-07-09 - an apostille legalisation platform went live following accession to the Hague Convention in August 2025, with recognition claimed in about 126 states.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Angola	No inventory of online services exists — the transition agenda counts projects, not services — while an at-home identity-card service and a public-finance programme launched. Full record What is missing first: no service catalogue is published and the transition agenda counts projects rather than services, so the count of public services available online is not knowable from the record. 2026-07-28 — an at-home identity-card service launched in one province at Kz 250,000 for at-home processing and Kz 10,000 for delivery alone, on a 48-hour issuance target, with requests through a web portal and a messaging number. The ministry called the fee a product of exclusivity, and no ministry publication naming the portal is on file. 2026-08-17 — a programme to modernise finance ministry services and restructure state bodies was authorised by presidential order as a direct award. Its value is not established: the earlier of the two accounts, whose reporter says he saw the order, gives three different figures in one article, and the later reproduces its lead almost word for word. The health ministry's recruitment competition shows what online registration costs when it goes wrong: of more than 420,000 who registered in July 2026, more than 170,000 were excluded for defective registration, leaving more than 262,000 to sit tests for 6,030 posts on 21-25 September, sat nationwide and marked online (competition).	Advanced
Benin	More than 230 services run through the national portal, while the e-procurement platform was retired and its build tender failed. Full record 2026-06-25 — more than 230 services are delivered online through a single portal riding on the national exchange, against fewer at the start of the window, and more than 250 digital services are cited in the 2031 strategy material. The country was ranked a 2025 GovTech Maturity Index top performer, a reference index cited and not absorbed. Against that, 2025-09-16 — the first tender to build a new e-procurement platform was declared unsuccessful, after a decree had already retired the previous system and portal for a replacement costed at 3.3bn FCFA on World Bank financing. The old platform is gone and the new one is not built. 2026-07-24 — a joint circular requires every state structure to move archive and procedure management onto digital tools, with returns stated as fiscal and environmental rather than as service improvement, and no deadline, budget, scope definition or compliance mechanism. 2026-07-31 — one university made its academic records platform the sole channel for certificates and transcripts, with no fee schedule, turnaround or appeal route published.	Advanced
Botswana	Electronic services rose from 33 to 52 under a Digital Services Act in force with a compliance clock to November 2027, while the payslip portal went offline. Full record 2026-03-18 — the government services platform records electronic services increased from 33 to 52, including teacher registration, appointment scheduling and business facilitation. No usage, transaction or uptake figure is held for either end. The Digital Services Act came into force on 21 November 2025 with a 24-month compliance window running to November 2027, the clock confirmed in February. 2026-07-22 — against that, the government payslip portal is offline with no reopening date after the data-protection regulator's enforcement notice, a privacy notice, an impact assessment, multi-factor authentication and disaster recovery having been added since. It is the only government system on this ledger taken offline by the regulator. Procurement has not moved: the electronic procurement system is still due at the beginning of 2027, and the authority still states it has no real-time data on procurement transactions, against a strategy approved in June 2025.	Mixed, the services platform grew from 33 to 52 while the regulator took a government portal offline

COUNTRY	DEVELOPMENTS	PROGRESS
Burkina Faso	A central portal carries 1,672 information sheets, 95 procedures and 183 institutions, against a ministry count of 146 procedures live of 272 platforms initiated. Full record 2026-05-05 — a central gateway launched with 1,672 information sheets, 95 online procedures and 183 public institutions, partly to counter fraudulent administrative websites. Its 95 do not reconcile with the ministry's count of 146 operational procedures out of 272 platforms initiated since 2023, reported against objectives contracts at 91%. The window's launches run through five ministries. All state-funded official travel must be processed through a platform that identifies the cheapest offer automatically. Treasury teleprocedures and round-the-clock treasury banking launched in April. Pension formalities moved online, presented as improving data exchange between three administrations rather than as a web front end. Three diplomatic and consular platforms launched in August. A health portal takes applications to open private health establishments, 247 lodged since April and 39 validated at launch, built with the digital ministry. Volume is real: over 600,000 criminal-record certificates and nearly 70,000 nationality certificates issued through justice platforms, against internet access of 72% urban and 27% rural.	Advanced
Burundi	One-stop service desks are under operationalisation with archive management still largely manual, a paperless Council of Ministers is reported, and a finance system award is contested. Full record 2026-07-31 — operationalisation of one-stop service desks is named in the civil-service ministry's reform programme, with the ministry itself stating that archive management is still largely manual and service digitisation unfinished. 2026-06-12 — a paperless Council of Ministers is reported as operating, with no instrument or date published. 2026-04-20 — the integrated public finance management system is under procurement at an envelope of about US\$30m, and the single-source award is contested by a non-governmental organisation. The allegations are reported and not established, and no primary from the organisation or the ministry is held. No count of services available online, no service catalogue and no usage figure appears anywhere for the country.	Advanced, on announcements rather than on a countable service estate
Cameroon	Second-generation consular services launched across 46 posts, and a utility commercial platform entered rollout. Full record The consular platform carried entry visas online only at the window's opening; second-generation consular cards and travel documents launched in October 2025 and the platform now runs across 46 consular posts and two international airports. 2026-08-10 to 14 - the water utility trained staff ahead of rollout of a centralised platform replacing decentralised commercial management, with automated meter reading and expanded electronic payment channels; the account is the director general's and no customer count, cost or completion date is stated. The electronic public-procurement platform runs on a US\$12m grant-funded upgrade with no dated update, a further US\$12.5m for interoperability described as due in 2026 and unconfirmed.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Cape Verde	A single services portal went live on 24 February 2026, against an unmeasured target of 60% of vital services online by 2026. Full record 2026-02-24 - a single web and app gateway went live covering finance, civil registration, identity, tax, higher education, transport and social services, with departmental portals to migrate into it; no count of migrated services is published, and the Prime Minister's own account is that departmental platforms did not communicate with each other before that date. It follows the justice portal launched in December 2024 behind the identity platform, serving land, commercial, vehicle and criminal-record certificates, civil-status certificates, identity-card renewal and appointment booking. The target of at least 60% of vital public services online by 2026 and 80% by 2030 was restated at a World Bank mission and remains unmeasured. The procurement platform was re-let at CVE 70,000,000 over four years on perpetual licensing, unlimited users, national deployment and full source-code control, extended to local administration and mandatory for 2026.	Advanced
Central African Republic	A unified public-services portal launched in December 2025, a whole ministry moved onto one platform, and a treasury single account application was deployed. Full record An operator published an account of its work to build more accessible and inclusive public digital services (account). It is the operator's own account with no service named. 2025-12-12 — a single entry point for administrative tasks, request and complaint tracking and access to official documents went live, with expansion to health, education and tax stated as planned. Its external financing attribution is asserted only by the launch report, and no usage, registration or transaction figure is held. 2026-02-27 — one ministry put human resources, budget, document management, project management, macroeconomic modelling and donor-financing tracking on a single platform, with a central register of government, international and humanitarian projects, launched under presidential patronage. The vendor pre-financed earlier phases from its own funds with no stated recovery mechanism, the platform's cost is stated nowhere, and its efficiency figures are projections rather than measurements. 2026-07-28 — a treasury single account application was deployed, tied to regional banking rules, with the stated object of centralising state balances and eliminating parallel and opaque accounts, and integration with the regional settlement rails. No cost, financier, vendor, timetable or number of accounts closed is stated, and the architecture is explicitly regional rather than national.	Advanced
Chad	The 2027 budget orientations provide for an electronic visa as the sole channel and fully online business creation, and a sovereign data platform produced a biennial delivery report. Full record The base holds no statement on whether an electronic visa operates today, and exclusivity is stated with no fallback channel (visa). Fully online business creation is provided for from 2027, with a continental bank programme separately funding interconnection of business one-stop shops (business, programme). A biennial delivery report on the presidential programme was produced through a sovereign data platform; no custodian, supplier, hosting arrangement or public access to the platform or its data is stated, and the report itself is not held (platform). An integrated transport-services platform was discussed at a ministerial meeting in September 2025 with nothing further on file, its stated scope covering vehicle registration, driving licences, technical inspection, transport licences and permits (transport).	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Comoros	The e-government project's general procurement notice opened in March 2026; the scholarship portal has not gone live. Full record 2026-03-12 - the notice was issued on a loan of 5,000,000 Islamic dinars, about EUR 5,960,000, with submissions open to 12 March 2027: one component covers a national data centre, an incubator and an orientation centre on the university campus, and another a portal, essential services, an administration payment system and an interoperability platform, each financed entirely by a different lender and none by any domestic appropriation. The online scholarship portal has been marked under way on the agency's own delivery log since a technical meeting of June 2024 and is not live on the record; no delivery date was ever published, so it is not recorded as stalled. No government services portal or single window exists.	Advanced, procurement only
Congo	A task force was gazetted under the Prime Minister on 6 August 2026, with four priority services committed within two years. Full record 2026-08-06 - a decree created a task force under the Prime Minister with four organs: a strategic committee chaired by the Prime Minister seating thirteen ministers and meeting at least four times a year, a steering committee under the Vice-Prime Minister, a technical committee chaired by the digital-economy minister seating five agency directors-general, and an investment committee chaired by the finance minister, with interoperability of public information systems a standing objective. Its first listed task is to audit the level of digitisation across the administration, so no baseline is stated. The roadmap commits civil status, passport, criminal record and company creation as digitised priority services within two years. The one service actually compulsory is certified electronic invoicing, mandatory for every economic agent.	Advanced
Cote d'Ivoire	A prioritised list of 59 digital public services was agreed in September 2026, a driving licence is carried on a phone, and electronic signature is spreading across ministries. Full record 2026-09-04 - a national prioritisation workshop closed having examined 140 of 620 inventoried public services through nine working groups and retained 59 for immediate prioritisation, with ten quick wins expected by the end of 2026 including diploma authentication, digital proof of life for pensioners and the computerised patient record. The list is not published, and the minister put a governance framework for the transition ahead of it as the first priority (governance). 2026-05 - the licence is carried on a phone showing its points balance in real time and accepted at roadside checks where officers scan it against the central database, drivers still advised to carry the card. 2026-08-12 - the electronic-signature programme reached the commerce ministry's leadership, after the civil service, the tax administration and the construction and mining ministries. No certificate authority, standard, enrolment total or legal-effect statement is held for it. 2025-11-18 - a report under the digital acceleration project mapped and evaluated every digital public service across 147 entities, classifying them by nature, provider, access mode and cost against named accessibility, usability, continuity and security standards. Its prioritised list is the one now agreed; the cartography is not published as a dataset.	Advanced
Djibouti	A business platform entered design in December 2025, and the state archive programme signed an accord in August 2026. Full record 2025-12-15 - a design phase was launched for an integrated business platform on three pillars: a startups portal, a government-to-business counter and an extension of the one-stop counter, reported the same week. Nothing is reported built. The archive programme has run state-funded since 2023 with over 200,000 secured digital files for the Presidency, and signed a letter of accord with the UN development programme on 2 August 2026 extending it to the audit and integrity institutions from September 2026. The accord's text, value and duration are not stated, and delivery is asserted by the parties at signature rather than independently measured.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
DR Congo	The digital government platform's first-quarter 2026 target passed with neither launch nor delay announced. Full record A functional digital government platform was targeted for March 2026, announced alongside an interbank payment platform, an online tax portal and a customs system. No platform, revised date or announced delay is held, and none of the companion systems is established as live. 2026-06-24 - technical training closed for ministry staff on a platform to authenticate documents against forgery for economic inspections; training completion is the only milestone on file and whether the platform is in production is not established.	Advanced
Egypt	The services platform reached 242 services and about 20m transactions since the start of 2026, and the country rose 47 places on the govtech index. Full record The platform had about 170 services, 8.1m registered users and 7.8m transactions in 2024 and now has 242 services and about 20m transactions since the start of 2026, with 73 services exclusive to it and other digital channels. Usage reached 10.7m users, up 32.1%, and more than 25m transactions and enquiries in 2025, with a trade account putting users higher than the ministry's own readout carries. On the composite measures the country sits 22nd globally with a score of 0.911 on the 2025 govtech index, a rise of 47 places from 69th in 2022 but 95th of 193 on the 2024 e-government index, below its 2010 peak of 86th. 2026-08 - a digital visa on arrival began in all Cairo arrival halls as a QR code valid seven days, the paper sticker running in parallel for a limited transition. A unified services card bundling health insurance, food subsidy, the cash grant and fertiliser subsidy, linked to postal accounts, is in a Port Said pilot covering 41,500 supply families, with no national rollout date published. 2026-09 - the prime minister called faults in the unified electricity platform and prepaid-meter discrepancies a government priority; no outage notice or restoration date is published.	Mixed, the services platform grew while the electricity billing platform faulted
Equatorial Guinea	The document agency opened two provincial offices with online appointment booking, and a civil-service management system is in implementation. Full record The offices opened in June 2026 at two interior cities, with booking through the agency's own site, where citizens had previously travelled to central offices (offices, tariffs). An administrative-procedure tracker launched in 2021 lets citizens follow a procedure's status through the public service ministry's site, with no processing-time or usage figure published in five years (tracker). A civil-service management system with biometric attendance and automated payroll is in implementation on an estimated eighteen-month timeline, with a steering committee convened in March 2026 and a monitoring strategy (steering committee, timeline).	Advanced
Eritrea	The only operating government digital system on the base is an internal customs platform (account). Full record Eritrea inaugurated a customs platform in January 2026, replacing a paper-based system operational since 2007, with full source-code transfer to the government, an intranet architecture connecting all customs stations independent of continuous internet access, solar-powered servers and a ten-month capacity-building programme (account). It serves customs officials, not the public. The standing external measurement is the 2024 United Nations e-government survey (technical appendix); its country-level index values for Eritrea are not in the text held, so the base names the measurement without carrying its numbers. No online government service a citizen could use is recorded anywhere on the base.	No change, a first statement of the position with no citizen-facing service on the base

COUNTRY	DEVELOPMENTS	PROGRESS
Eswatini	A citizen application and a tax application launched together, and the prime minister told the House that a memorandum signed without proper consideration for data protection is meaningless. Full record Both applications launched in May 2025, for government services and for tax accounts and clearance certificates (launch, applications). The prime minister's own words — that the application must be watertight, that his office does not support outsourcing data to global technology companies, and that a memorandum signed without proper consideration for data protection is meaningless — are in his written responses tabled to the House of Assembly in March 2026 (responses, criticism). An assessment count of government services available online is held (services), and an electronic-government strategy is being founded on that same assessment with nothing yet produced (strategy).	Mixed, two citizen applications live while the prime minister states a memorandum signed without proper data-protection consideration is meaningless
Ethiopia	The unified platform's own catalogue lists more than 180 services from 23 organisations, against 41 services and 12 agencies a year earlier. Full record The public catalogue, read in August 2026, states more than 180 government services from 23 named provider organisations, each listed with required documents, processing time and fees (service catalogue). A government communication of April 2026 claims 2,260 services integrated, two months before the 185 stated at the June launch, so the two counts run concurrently on different bases rather than showing a rise (government communication, platform launch). Electronic government procurement is credited by the Auditor General with the decline in cash shortages across 163 audited federal institutions, in a report that also finds billions of Birr uncollected (audit report). An unmanned police station opened in March 2026 with self-service kiosks for reports, fines and document requests (police station). The transport and logistics ministry launched three national systems with the incumbent operator: a cross-country public transport service system, an integrated fuel supply system and a national traffic point-based penalty management system. A trade magazine account of the launch is the record; no coverage, volume or data-handling rule for a penalty system keyed to drivers is published.	Advanced
Gabon	A public finance system went live and connected to the Treasury, while a single window and an internal civil-service suite remain presentations. Full record The public finance system, launched on a presidential directive of October 2025, is live and connected to the Treasury, with extension intended and no transaction or coverage figure published (public finance system). A single digital window was presented to the President by the same supplier in February 2026, with no build stage, launch date or budget held (single window). An integrated suite for secure messaging and confidential document exchange between civil servants was presented in August 2026, built with a domestic start-up and the state holding the source code at no cost; no rollout date is published (civil-service suite). A tourist electronic visa platform operates for a three-month free visa, with no volumes or processing times published (visa platform). 2026-08-31 — a government services portal is in pilot preparation, after interministerial consultations in June 2026 across five ministries with at least ten services to be integrated by December. Whether this is the single digital window already held or a second instrument is not stated. 2026-09-01 — two public Wi-Fi spaces and a digitised driving-licence enrolment centre were delivered in Makokou, fitted with dedicated circuits, inverters and voltage regulators (deployment) — the first item here outside the capital.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Gambia	The financial management system has no statement of coverage or condition since 2020, and a staff verification round was suspended in August 2026. Full record The system is in service across ministries with revenue and treasury interfaces; the last date attached to it is a financing operation's closing year rather than a statement about the system (financing). The provincial round of a civil servant and pensioner verification exercise, scheduled for 17 to 23 August 2026, was suspended until further notice over unspecified technical difficulties, with the Greater Banjul round confirmed to start on 20 August; the difficulties are not described and no rescheduled date is given (suspension). 2026-08-28 – the public service ministry told a ministerial interface that national identity card, passport and immigration procedures had been simplified and built into a digital services platform, which has not launched because of unresolved contractual issues over passport issuance, with rollout targeted before the end of 2026 starting with the machine-readable passport (statement). A platform complete and blocked on a contract is the same failure mode as the verification round suspended on unstated technical difficulties.	Mixed, the financial management system has run unreported for years while a verification exercise was suspended mid-round
Ghana	Electronic procurement is mandatory for all state institutions, while the services portal is still at about 2,000 services against a 16,000 target. Full record The finance minister directed all state institutions onto end-to-end electronic procurement with pre-disclosed evaluation criteria, integrated with the national payment system; the procurement authority's claim is substantial reduction, not elimination, of procurement corruption (procurement). The portal's fourth-quarter 2025 relaunch target passed with nothing recording delivery and no service count published since July 2025 (relaunch, target). A fiscal electronic device pilot under the 2018 Act ends in August 2026 with 40,000 devices approved and a reward scheme to be paired with it, on a projection of GH¢7.2bn a year, unit cost and who bears it not disclosed to Parliament (fiscal devices, fiscal review). The interior ministry stated on 24 August 2026 that it is rolling an automated fire-safety compliance system out from the end of that month, with no scope, cost or operator named (fire safety). The online passport application service went down on 25 August 2026, the foreign ministry confirming a technical fault the same day and naming neither cause nor restoration date (outage). The accountant-general's department will suspend from 15 September 2026 the salaries of government employees whose national identity details do not match the payroll system, after the upgraded payslip system surfaced the discrepancies (directive).	Mixed, procurement and fiscal devices advanced while the citizen portal's redesign slipped and its payments broke
Guinea	An e-procurement platform now digitises the full procurement cycle, with a decree of August 2026 fixing the rules for taking paper out of the process. Full record The decree of 21 August 2026, made under article 56 of the 2019 procurement code, provides for a national electronic platform for public contracts and public-private partnerships managed by the finance ministry, mandatory registration of contracting authorities and bidders, and encrypted bid submission; it does not state whether the national platform is this one or a successor (decree, platform). A joint government mission went to Kigali in August 2026 for talks covering the platform's evolution (mission). An industrial-permits platform issues licences in 72 hours as successor to an earlier system (permits). A single window for public services is agreed with Azerbaijan on its own service model, with no launch date published (single window), inside a package of nine announced projects covering human-resources systems, a government laboratory, electronic tax, an information-technology inventory, digital skills and the biometric payroll (package).	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Guinea-Bissau	A one-stop digitalised transport counter opened at Gabu, the first outside the capital. Full record Electronic government is assessed as thin by the one academic study the base holds: blocked by weak infrastructure and the absence of a legal framework. Against that, delivery has started: a one-stop digitalised transport licensing counter opened at Gabu in March 2026, the first outside Bissau, and the digitisation action plan for the main public services was delivered in November 2025. The national programme launched in August 2026 carries electronic government among its four strands.	Advanced
Kenya	Draft regulations would vest ownership of the platform in the Treasury (regulations), and the Auditor-General found Sh36.5bn of 2023/24 collections unsupported by bank statements. Full record The eCitizen payment platform failed for much of 26 August, leaving transport authority services unusable, transactions abandoned or paid for twice and invoices missing, with the authority confirming the fault and dispatching a platform team (outage). The tax invoicing platform reached through eCitizen was then down for three days to 31 August, taxpayers able to generate invoices but not download them, stalling payments that revenue rules make conditional on such an invoice (outage). Against that, the Treasury presented draft regulations on 27 August that would replace the convenience fee with a statutory access fee and vest ownership, hosting, administration, maintenance and security in the Treasury (regulations), and members of parliament demanded clarity on who owns the platform (demand). The base holds no uptime figure for the platform, so its reliability is measured only by the outages that get reported.	Mixed, the platform's legal footing advanced while its availability regressed and Sh36.5bn of its reported collections went unsupported
Lesotho	An e-Parliament system was completed, a digital outreach studio opened, and a decision support system is under development. Full record The 2025/26 budget speech reported the e-Parliament system implemented, described as a milestone in modernising legislative processes, with no further detail published (budget speech). A Digital Outreach Studio was launched in June 2026 under the second phase of the eGovernment Infrastructure Project (studio). A decision support system for planning and budgeting was presented as under development in February 2026, with no scope, host or date published (review).	Advanced
Liberia	A coordinating office was established by executive order in April 2026, and three government platforms are in service including one now studied abroad. Full record The office is the whole-of-government coordinator for enterprise standards, interoperability, technical clearance of technology investments and baseline cybersecurity, with twelve months to draft an institutionalising law (executive order). The electronic procurement platform launched nationally in February 2025 and began its second-phase equipment distribution in August 2026; a neighbouring country's procurement authority studied it on 6 and 7 August, the first export of a domestic government system on the record, and no transaction count, entity coverage or procurement value is published (regional model, cooperation). An automated telecom licensing and renewal platform entered service in August 2026 with in-person service kept available, and no licence count, processing time or fee schedule is published (licensing platform, rollout). A civil-service power-of-attorney platform went live in December 2025 with 5,000 enrolled across 16 government entities, tying civil-servant purchases to fingerprint verification (platform).	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Libya	Four state platforms moved in 2026: e-visas, an export window, a government reporting tool and an exhibitions register, with usage published for two. Full record The electronic visa service took 2,325 applications from 103 nationalities between 1 July and 17 August 2026, of which 67.1 per cent were approved (usage). The Electronic Unified Export Window processed LD 79.5m of exports from April to July 2026, with 354 companies registered and 190 products exported, two thirds of orders going to Tunisia (export window). LY-GOVREP was activated on 9 April 2026 as the unified performance-monitoring tool for public entities (activation), after preliminary operation with 60 cabinet entities (preliminary). An exhibitions and conferences platform was launched on 9 August 2026 as the first specialised system for that sector (launch).	Advanced
Madagascar	The national interoperability platform launched in April 2026, days before the project that built it passed on its institutions. Full record The interoperability framework of 2022 is the founding technical and organisational instrument, establishing the coordinating unit's role and the first set of interoperable systems (framework). The platform's first stage launched in April 2026, with the first usage conventions signed (launch). The donor project that built the identity, interoperability and data-centre layers passed on its institutions in June 2026 (closure). What the base does not hold is a catalogue of services available to citizens online, a transaction volume, or a successor operating budget for the platforms the project leaves behind.	Advanced
Malawi	E-procurement became mandatory for all public entities in April 2026, while the passport system carries an unresolved backlog and queue transparency is only accepted in principle. Full record The electronic procurement system built under the foundations project became mandatory nationwide from 1 April 2026 under a March directive covering all public entities, with remote submission and registration; no post-mandate uptake figure, tender count or exception list is held (mandate, initiative). A US\$29.9m passport contract awarded in January 2025 had a troubled transition and a backlog of over 100,000 applications (contract); printing resumed at Mangochi in July 2026, and a member told the House that applicants who filed nine months to a year earlier are being overtaken by same-day issuances (printing, queue). A sequence number at application, message notification and an online portal were accepted in principle and deferred until the passport system stabilises (transparency), and an electronic auctions platform is being scoped to replace paper government auctions (auctions).	Mixed, e-procurement made mandatory nationwide while passport applicants who filed a year earlier are overtaken by same-day issuances
Mali	A diaspora services platform, a driving licence and vehicle registration service, a territorial administration system and an HR management system are the recorded stack. Full record The diaspora services platform launched in February 2025 with no usage figure published (platform). The driving licence and vehicle registration service is live and linked to the treasury payment service and the customs system (service, presentation), while the territorial administration data management system is in build with no deployment figure (territorial system). An integrated human resources management system was reported in build in July 2026, with no scope or completion figure published (human resources). Not one of the four carries a usage number.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Mauritania	An administrative procedures portal consolidates more than 800 procedures, consular services went online in July 2026, and water utility transactions joined the services portal in August. Full record The procedures portal launched in February 2026 as a directory of more than 800 procedures with documents, processing times, agencies and tracking; no usage figure is published (portal). A consular platform launched on 9 July 2026 with nine online services covering registration, the consular card, travel authorisation, legalisation, powers of attorney, appointments and burial and repatriation permits, built by diaspora engineers with the ministry after consultations in twenty-two countries (platform, services). The water utility's transactions became available remotely from 4 August 2026 (utility), and a remote transactions platform named in a roadmap is now the subject of integration work with the territorial-administration system, reported as under discussion rather than delivered (integration).	Advanced
Mauritius	An online motor vehicle licence and road tax service launched in August 2026, with electronic gates, visa and judiciary funded and a clinical-trial licensing system provided for in statute. Full record The licence and road tax service is live for taxi operators, who renew and pay online instead of at post offices and counters, and the ministry states it will also build a database of operators; the transport authority's underlying system is stated as outdated with a tender launched to upgrade it (service). Electronic gates, an electronic visa and an electronic judiciary are funded in the budget alongside a healthcare innovation and artificial-intelligence unit, with no procurement, vendor or delivery date published (funding). The omnibus bill would put concurrent submission, review and processing of clinical-trial applications through a statutory electronic system, with the council and ethics committee empowered to meet virtually; the electronic channel and the procedure that runs on it are in the same statute, which makes the channel enforceable against the regulator (licensing). A metrology platform for bookings, payments and certificates is separately in build (metrology).	Advanced
Morocco	600 services are online, 22 certificates were abolished under the simplification law, and the procedures portal carries over 2,500 transcribed procedures. Full record The official e-visa portal failed from 20 August 2026, freezing after the travel-conditions step so applicants could not reach the personal-details stage (report). No restoration date and no official acknowledgement is in the base. Law 55.19 has been in force since September 2020 and created the procedures portal by its article 26: only procedures published there are legally recognised and enforceable on citizen and official alike, certified copies and legalised signatures are dropped for most procedures, and no administration may demand more than one copy of a file (law). The ministry reports a 45 per cent reduction in documents demanded of users where its simplification method has been applied, on perimeters it does not name (method). An interior ministry circular abolished 22 certificates in 2026 and replaced them with sworn declarations (circular). The medical council put registration, transfers, licence changes and fee payment online in August 2026, implementing a mandate set by decree in 2016 (platform), and 600 services were counted online in February 2026 (count).	Regressed, on the availability of a service the state runs

COUNTRY	DEVELOPMENTS	PROGRESS
Mozambique	A citizen portal enters experimental phase with about 140 services inventoried, an environmental licensing platform launched, and a two-hour notification certificate was decreed. Full record The citizen portal's prototype is being completed with an experimental phase due between late August and early September 2026, about 140 public services inventoried for gradual integration beginning with passports and driving licences; no budget, supplier, authentication method or data-protection arrangement is stated (portal, agency). An end-to-end environmental licensing system launched in August 2026 carrying a permit from application through issuance into monitoring, audit and inspection (platform, upgrade). A decree approved in August 2026 requires a prior-notification certificate within two hours and lets the applicant trade anyway if it does not issue, mandates automatic information-sharing between five state bodies and makes electronic signature equivalent to handwritten; the decree is not held and the account names no safeguard or oversight for the mandated exchange (decree). One-stop desks with an online platform were already operating (desks). A second, authenticated portal is already in service: the registries and notary service's Portal do Utente carries legal-entity, vehicle, civil, criminal and property registration, notarial acts and the central registries, with case tracking, appointment booking and a declaration channel for beneficial owners. No user or transaction figure is published for it. 2026-09-01 — the road transport regulator launched a digital licensing system, moving applications for special transit licences for oversize and overweight vehicles and for emergency warning-device certificates to an end-to-end online process (launch). It is the second sectoral licensing platform in a month, and neither is stated to connect to the citizen portal now entering its experimental phase.	Advanced
Namibia	The digital government roadmap targets digital identities for at least a quarter of the population by 2026, electronic signatures missed a February 2026 launch, and full digitisation is targeted for 2029/30. Full record The roadmap runs 2024-2026 and no digital-identity coverage figure has been published, with card issuance beginning only in September 2026; the document is known through one outlet's account (roadmap). Accreditation of electronic-signature service providers was under way with nationwide deployment targeted for February 2026; that target passed without a launch on record, and the capability is now described as a component of the September 2026 identity card (signatures, accreditation). Full digitisation of government services is targeted for 2029/30 with no delivery measure published (target), and a N\$13 million roads project control system was commissioned in August 2026 with no public access to its dashboard stated (roads). One service did go live: computerised learner's licence testing and a book-and-pay system launched at one traffic centre on 9 June 2026, with N\$1.2 million spent there and N\$25 million budgeted for 288 testing units across 43 centres by March 2027. The first 450 applicants passed at 14 per cent, which the minister presented as evidence that leaked papers had been removed rather than as a problem.	Mixed, a roadmap target of digital identities for a quarter of the population by 2026 against card issuance beginning only in September and electronic signatures that missed their launch

COUNTRY	DEVELOPMENTS	PROGRESS
Niger	An application putting payslips on a phone launched in April 2026, on a procedures portal running since 2021. Full record The finance minister launched the payslip application on 30 April 2026, letting every state employee consult, download and print their payslip history from a phone instead of attending the pay directorate, a regional budget directorate or a personnel department. The national procedures portal has been live since January 2021, presenting administrative procedures for individuals and businesses by sector, some consultative and some linking to online processing. The policy validation workshop of March 2026 names modernising public governance through e-government as an explicit aim of the draft 2026-2035 policy. No count of transactional services, or of users, is published.	Advanced
Nigeria	A single sign-on gateway is in pilot, a centralised service gateway launched in August 2026, and neither states its relationship to the other. Full record The sign-on gateway is piloting on a four-year foreign-funded project reported at US\$13m inside an electronic-government master plan (gateway); the load-bearing feature is the once-only data exchange behind the login rather than the portal itself (gateway, platform). A centralised gateway launched in August 2026 as a single point of access to federal services previously spread across agency websites, stated as a defence against fraudulent look-alike sites; no service count, transaction volume, cost or build attribution is published, and no relationship is stated to the sign-on gateway that soft-launched a month earlier (services). A central bank document-flow and payment solution has been live since January 2025 (documents), and the technology agency agreed to digitise pilgrimage operations end to end with no scope document, budget or timetable published (pilgrimage). A third platform was approved in the same period and sits outside both gateways: a smart national transport data bank, approved by the Federal Executive Council on a design-build-finance-operate-and-transfer model, to hold a nationwide central database of drivers, vehicles, number plates and operators and to standardise motor-park manifests (approval). No cost, concession term or data-custody arrangement is disclosed for it.	Advanced
Rwanda	The government services platform reported more than 600 services at a national infrastructure day, against 248 a year earlier on the operator's own count. Full record The scale figure comes from coverage of the national infrastructure day (platform). The near end of the window is now firm: the operator's own account put the platform at 248 services from nearly 40 institutions on 9 July 2025, and a local-government impact assessment dated September 2025 counted 247, citing the operator's website. A secondary account of August 2026 attributed a hundred-plus figure to that assessment; the assessment does not state it. The electronic procurement platform is being adopted and co-developed by another state; a July meeting reports areas identified rather than agreements reached (procurement, meeting). Both rows are the same shape: a working national system, reported through its export or its launch event rather than through a service, transaction or uptake series.	Advanced
Sao Tome and Principe	A citizen portal entered beta in March 2026, funded by a lender and a foundation with external technical advisory. Full record The beta was launched at the identity institute's eighteenth anniversary (portal, launch). Two accounts frame the same launch differently — one as the institute's portal, the other as the lender and foundation's citizen portal — and they are treated here as one object. No service count, user figure or exit-from-beta date is published. It sits on the same interoperability platform and digital identity prototypes recorded separately, none of which is confirmed delivered.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Senegal	A citizen single window was launched and declared operational in March 2026, and a public procurement platform carries state acquisition procedures with no onboarding or volume figure published. Full record The portal was launched by the prime minister on 24 March 2026 and declared operational, presented alongside a sovereignty cloud, a unified government payment system and a consular platform (portal, year on). The procurement platform launched in October 2025 to carry state acquisition procedures, and no count of administrations onboarded, procurement volume, availability record or security accreditation is stated (procurement). The telecommunications regulator has deployed eight platforms of its own, sovereignty-framed and with no usage or publication figures held (regulator), and an equipment tender for a parliamentary system opened in August 2026 with no function, scope or go-live on record (parliament).	Advanced
Seychelles	The government portal was relaunched in June 2026, a business one-stop portal entered pilot with fifteen or more services, and a social protection delivery platform was briefed to stakeholders. Full record The portal relaunch coincided with the fiftieth independence anniversary (portal). The business portal launched with a vendor in November 2025 covering two service journeys and fifteen or more services, with full rollout targeted for June 2026; the account is a vendor press release not verified against a ministry primary (business). The social protection platform was briefed rather than launched in August 2026, with no go-live date, beneficiary count or service list published (platform). Against a 2030 target of full digitalisation, no source states how many services exist or how many are online.	Advanced
Sierra Leone	Digitisation of government services is agency-reported with no service list or definition published, and three back-office systems — procurement, monitoring and audit — are in progress. Full record The government launched a digital jobs portal stated as intended to break the nepotism cycle in youth employment (launch). No vacancy or placement figure is on the base. The digitisation figure is agency-reported, with no service list or definition published, so it cannot be checked against any service a citizen would use (services). Electronic procurement is advancing through bilateral cooperation with a neighbour whose own system is described as a regional model (procurement, model). A national monitoring and evaluation system is expanding with no coverage figure, publication rule or public access to the tracked project data stated (monitoring), and an audit management system completed post-configuration training with no cost, go-live date or audit scope stated (audit).	Advanced
Somalia	A national job portal launched as a centralised, domestically hosted platform, and a federal electronic visa is contested, with a fee exemption for one region under negotiation. Full record The job portal launched in February 2026 as a centralised platform hosted in the country, which is the only service in this unit whose hosting is stated (portal). The electronic visa is in force and contested: a fee exemption for one region was under negotiation in August 2026, and no issuance count, fee schedule or outcome is published (visa). A federal digital service whose application to part of the territory is a matter of negotiation is the same territorial limit the identity register meets.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
South Africa	The single citizen application reached a production-ready pilot with a stable platform due September 2026, and the electronic travel authorisation went live at four airports. Full record 2026-08-03 — the single citizen application progressed from proof of concept to a production-ready pilot with governance arrangements in place, with the stable platform, the first credential use case and a shared government platform all targeted for September 2026 and further departmental use cases for March 2027. Public access had been promised for the first half of 2026 in the February 2026 address, so the platform advanced and its date slipped in the same window. The first credential is a digital school-leaving certificate, in testing with the certifying body. 2026-08-12/16 — the electronic travel authorisation went live at four airports and was launched by the President, with full visa-type rollout targeted by end-2026. The department publishes no statistical series for it and the bases do not reconcile: 88,033 applications to January 2026 in a parliamentary reply, over 75,000 processed with nearly 4,500 rejections at the May budget vote, 203,000 processed by July, and 6,126 rejections put at 2.8% of pilot submissions in August. The social security agency opened a messaging self-service channel for grant application, review and proof-of-life status, after verification by mobile number, one-time PIN and identity number (channel).	Advanced
South Sudan	An exclusive e-Government services contract was signed in 2019 without competitive tender, with the profit share put at 75 per cent by a United Nations commission and at 2 per cent by the company. Full record The commission puts the profit share at 75 per cent to the contractor (commission); the company says it takes a 2 per cent platform service fee, which describes a separate tax contract (commission). The two accounts have not been reconciled (commission, denial, defence, partnership). The electronic visa portal runs inside that concession, applications online only with a stated 72-hour processing time and fees denominated in United States dollars, so the charge is levied through a privately operated channel (visa). The regulator separately launched its own services platform in February 2026, digitising licensing, payments and regulatory workflows (platform).	Mixed, three platforms live while the exclusive concession behind them was signed without tender and its revenue share is disputed
Sudan	The national platform became the sole channel for all foreign-trade transactions with permits issuable from any location, and no coverage or uptake figure is published for any service tranche. Full record The platform launched 28 services in February 2026 (services), carried electronic investment licensing from that month (licensing), reached 130 health services by July (health), and was adopted in August as the sole national platform for foreign trade with permits issuable from any location (trade). No coverage or uptake figure is published for any of the announced tranches, so the count of services is the only measure of it. A public procurement platform launched in August 2026 (procurement), and a finance-ministry platform for public-sector companies and authorities launched the same month, reported by the state news agency with no supplier, cost, entity count, reporting standard or go-live scope published and nothing stating what it replaces (finance platform, launch).	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Tanzania	A maturity classification placed the country in the top group in its 2025 edition, and the rank is not stated in any held source. Full record The classification's release date is month-precision and the 2025 rank is not stated in any held source; digital citizen engagement is the weak pillar region-wide (classification, leaders). The classification rests on the service bus recorded separately, whose actual onboarding count no source states. A top-tier placement resting on an unmeasured backbone is what the record supports. The cereals regulator ran the country's first white maize auction on a digital trading system, selling 335,238 kilogrammes in Rukwa Region in a first phase with the mercantile exchange, the warehouse receipts board and the cooperative development commission joining the sale (auction); further phases are unannounced.	Advanced
Togo	The national public service window added twenty-nine energy-sector procedures with other ministries expected from January 2026, and a digitalisation programme ran a four-week sprint at the foreign affairs ministry. Full record The council of ministers adopted a decree on 26 August 2026 amending the investment-approval committee so that the approval procedure is handled electronically (decree). No usage volume or transaction count is published for the window, and nothing on file after December 2025 confirms whether other ministries joined in January 2026 (window, civil status). The sprint launched at the end of March 2026, with no published schedule for the remaining ministries and no completion criterion (sprint). A volunteering agency application is live on or before July 2026 on the evidence of its own registration tutorial, and whether it authenticates against a national citizen account or mints a separate identity silo is not established (application). Electronic document management at the finance ministry reached a further training phase (documents).	Advanced
Tunisia	Thirty-four digital service houses were completed across 21 governorates in seven months, and the project portfolio is counted as 114 in execution and 192 under tracking with no reconciliation published. Full record A first version of the national services application launched, giving citizens unified round-the-clock access to electronic services (launch), and a unified platform came into service as the single gateway to the industry ministry's services (platform). The service houses were completed between December 2025 and June 2026; the reach figure is the programme's own and counts citizens reached rather than transactions completed, and no service list or staffing model is stated (houses). The two project counts measure different things — 114 in execution against 192 under national tracking — and the government publishes no reconciliation, project list or completion series for either (portfolio, projects, review). A single administrative services portal was reported delivered by end-2025 (portal), and a mobile application announced for imminent launch sits on top of that existing portal rather than replacing it, depending on the mobile identity credential (application). The industry ministry opened a unified digital services platform on 28 August 2026, its first service the technical cards governing effective transfer operations - more than 4,000 a year - filed and processed entirely online and interconnected with customs so data is exchanged and decisions notified in real time (platform). It runs on the national digital identity mechanisms and is linked to the enterprise register, with import authorisations and establishment licences to follow on a phased timetable.	Advanced

COUNTRY	DEVELOPMENTS	PROGRESS
Uganda	Electronic government procurement training opened for 100 further entities with onboarding to continue each financial year, and a copyright management system targets a September 2026 rollout. Full record The procurement start figure carries no date, and the authority states onboarding continues each financial year until all of government is on the system (procurement). A procurement portal upgrade to an infrastructure data standard was announced in November 2025 (portal). The copyright system is in testing with a September 2026 target; no cost, supplier, rights-holder count or description of what it registers or pays out is published, and the target date is the only dated commitment held (copyright). A teacher-training platform launched in August 2026 (teachers).	Advanced
Zambia	The national portal reports over 400 services onboarded — a figure stated for the service bus, gateway, portal and payment platform together rather than the portal alone — and an electronic government amendment bill is in development. Full record The 400-plus figure covers four systems together, not the portal alone (portal, appraisal, councils). Government services online were counted at a trade fair against a denominator that is the appraisal's estimate and is not restated in the newer figure (services). The amendment bill was presented at a stakeholder meeting, with officials naming fragmented, vendor-locked systems as a governance and legal problem rather than a technical one (bill, corruption). An online passport system launched with over 1,000 passports processed at launch (passports). Authentication has been separated out into a service of its own: ZamPass runs as the national authentication and access control service from the government service bus domain, with companion mobile applications and a consent endpoint. It is a single-page application that publishes nothing about its enrolment base, the identities it authenticates against, or which services sit behind it. The Secretary to the Cabinet directed every government institution to adopt the Smart Office Platform and told the Smart Zambia Institute to report by the end of October 2026 on the onboarding of ministries, provinces, spending agencies and state-owned enterprises, the direction given at the handover of the system to the airports corporation. No count of institutions onboarded is published.	Advanced
Zimbabwe	An electronic procurement system operational since January 2024 has added chatbots and machine-assisted bid evaluation, and there is still no national services portal in this ledger. Full record The procurement system was launched in October 2023 and became operational on 1 January 2024 for all public entities and bidders; the regulator says it has since added chatbots and virtual assistants and bid evaluation assisted by artificial intelligence, with no volume, saving or accuracy figure attached (procurement). The denominator of local authorities is not given in the record held, so the share filing on time cannot be stated (filing). The parliamentary programme is a first-hand account by the implementing partner with no national participant count (programme). There is still no national services portal, service count or government online-service measure anywhere in this ledger, which is itself the finding for a unit of this size: the state has automated the buying and not the serving.	Advanced

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
