

PROGRESS REPORT

US / hyperscaler activities: progress report, September 2025 – September 2026

Edition of 2026-09-10-3 · compiled by Claude Opus from the documents in the Corpus repository

53 countries. Each row below is carried verbatim from that country's own progress report, which answers a fixed frame of indicators over the period; nothing is written here. A country not listed under an indicator has **No evidence** on it in its own report.

Progress values. *Movement* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Movement, regulations still pending*.

USA / hyperscaler MoUs, engagements and commitments

COUNTRY	DEVELOPMENTS	PROGRESS
Angola	A wholesale partnership combined the state cable company's systems with a US network, while a US\$170m agreement stands undelivered. 2026-05-21 — a partnership agreement combines the state cable company's three subsea systems with a US network of more than 300 metro markets and 386,000 km of fibre, reported again the following week. No value, term or capacity commitment is stated. Against it, an announced US\$170m agreement with a US\$25m first phase for a national cybersecurity agency, vendor academy training and an undersea cable has no disbursement, contract or delivery on record in the fourteen months since it was announced at a business summit, and no trainee count, cohort or curriculum has been published against its training commitment. Nothing links its agency phase to the cyber centre created by decree six months later. A domestic subsea cable to link the coastal cities and connect a transport corridor to international systems is stated as under way, and the base names no US instrument, agency or financing behind its digital leg.	MIXED a wholesale partnership signed while a US\$170m agreement produced nothing in fourteen months
Benin	A public institution issued a procurement notice to integrate its directory with a US hyperscaler's cloud identity stack. No signed engagement is held. 2026-05-28 — a procurement notice sought a provider to integrate a local directory with a US hyperscaler's cloud identity service, including its government tier, and to configure that vendor's security and data-governance modules. It is a tender rather than an agreement, and it is the clearest in-window engagement between a Beninese public institution and a US hyperscaler's stack. The older US instrument on the record is the 2015 power compact, which is not a digital engagement.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Botswana	Botswana signed the Artemis Accords as the 68th signatory in June 2026, about fifteen months after its satellite launch. 2026-06-25 — the accords were signed at the American space agency's headquarters, making the country the 68th signatory, about fifteen months after the national satellite launch. It is a wire account and the signed instrument is not held. It is the only United States engagement on this ledger and it concerns space rather than digital infrastructure. No American technology vendor, cloud provider or financing instrument appears in the record for the country at any date, which is unusual for a middle-income economy with a certified data centre and a listed incumbent operator.	MOVEMENT
Burkina Faso	A United States training initiative on digitalisation and artificial intelligence was announced for 2026 in three cities, with no delivery, cohort size or start date reported. 2026-01-28 — the United States ambassador announced a major training initiative on digitalisation and artificial intelligence for 2026, to run in American-run spaces in three cities, against digital-cooperation talks at a preliminary stage with no agreement signed. No delivery, cohort size or start date has been reported in the seven months since. It is the only United States digital engagement on this ledger, it is a training announcement rather than an instrument, and no hyperscaler, cloud provider or American vendor appears anywhere in the record for the country.	MOVEMENT
Burundi	A five-year United States health-sector agreement commits US\$156m and includes health-data management; no data-sharing agreement under it is published. 2026-02-09 — a five-year memorandum with the United States committing US\$156m to the health sector was signed, including health-data management, where nothing existed before. It is the only United States engagement on this ledger and the largest foreign commitment of any origin. No data-sharing agreement under it has been published, no implementing arrangement is named, and no disbursement has been reported in the six months since. No hyperscaler, cloud provider or American technology vendor appears anywhere in the record for the country.	MOVEMENT
Cameroon	The state operator held a working session with a hyperscaler's Africa executives and the US embassy ICT representative; talks only. 2026-07 - the state operator approached a United States hyperscaler, with a working session involving its Africa executives and the US embassy's information technology representative, reported earlier the same month as digital transformation talks. There is no agreement, investment commitment or timeline, and no answer on where Cameroonian data would sit. That last point matters here: the approach sits against the same operator's own sovereign-cloud line and against the regional data-residency recommendation its regulator's peers adopted in February 2026.	MOVEMENT
Cape Verde	Selection for a third compact directed at connectivity was stated in the FY2025 budget speech; no compact document is held. The country was selected for a third compact, stated as directed at connectivity in transport, services and digital with the African continent. Nothing has moved: no compact document, size, signature date or programme detail is held at 2026-08-06. It is the only United States government instrument the base names for this country, and it exists only as a sentence in a budget speech nearly two years old.	NO CHANGE
Central African Republic	The incumbent operator's privatisation entered an operational phase in July 2026 on US\$150m announced, with definitive agreements and a schedule still to be established. 2025-09-18 — a privatisation memorandum was signed at a development round table; 2026-07-17 — the minister met the counterparty's operations vice-president and the government declared the memorandum in its operational phase, with US\$150m announced covering network modernisation, a data centre and a connectivity programme, and definitive takeover agreements, a joint steering committee and a deployment schedule still to be established. The deal structure is undisclosed, the figure is the counterparty's own and appears in no appropriation. It is the fourth attempted rescue of this incumbent, the previous one agreed in November 2020 and needing EUR 20m having never been funded. The state is meanwhile budgeting FCFA 250,000,000 of its own telephone arrears to the same operator for a third year — negotiating a sale while owing the asset money.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Chad	A United States digital work programme reached a mission and a readiness to support with nothing signed, and the minister flagged visa refusals for technical personnel as a delivery risk. A mission was held in May 2026 and readiness to support was conveyed at the end of June, with nothing signed; the two accounts give different mission dates (programme, partnerships, cooperation). The minister flagged United States visa refusals for Chadian technical personnel as a delivery risk, which is a rare instance of a government naming the counterparty's own policy as the obstacle to a partnership with it. Cybersecurity cooperation with the United States infrastructure security agency reached a videoconference after attendance at a Washington summit, with no instrument on file (cyber).	MOVEMENT
Comoros	Comorian officers took cybercrime investigation training in Botswana in September 2025; no hyperscaler agreement exists. The standing engagement is a facility: the American Corner opened at the University of the Comoros with more than 50,000 US dollars of technology and furniture from the United States government and high-speed internet provided by a private foundation. 2025-09 - Comorian law-enforcement officers took digital-evidence and cybercrime investigation training at the law-enforcement academy in Botswana from 1 to 5 September 2025, funded through the State Department's narcotics and law enforcement bureau. No agreement, cloud deployment or data-centre commitment with any American platform company appears anywhere on file. Both records are the embassy's own, and what they describe is access and skills rather than infrastructure or a commercial position.	MOVEMENT
Congo	The President activated Congo's connection to Meta's 2Africa cable at Pointe-Noire in February 2024. The ministry's own account records the President activating Congo's connection to Meta's 2Africa submarine cable at Pointe-Noire, the cable landed under the public-private Congo cable consortium, and commissioning the regulator's Tier 3+ data centre of 54 racks, connected to both WACS and 2Africa. It is the one realised United States hyperscaler engagement on the record. No signed memorandum with Meta was located, and no digital engagement with the State Department, USAID, the DFC, EXIM or the Brazzaville embassy is held.	NO CHANGE a standing position the base holds for the first time
Cote d'Ivoire	A US\$170m export-credit package was formally authorised in July 2026, covering a data centre, a digitisation platform and border surveillance. The 2023 agreement for a national data centre and a digital administrative city sat inside a wider trade package announced in May 2025, with US\$66m guaranteed in August 2025 and no export-credit approval made. 2026-07-16 - a US\$170m project was formally authorised covering a sovereign national data centre, a government digitisation platform and smart-border surveillance. It was announced by the United States, not by any Ivorian instrument, and the figures are US-side approvals rather than Ivorian disbursements. The same vendor has government authorisation for a set of digital-infrastructure projects estimated at US\$170m, about FCFA 95bn, with no signed contract, component list or procurement route held, and is building the tourism ministry's e-tourism gateway.	MOVEMENT
Djibouti	A new impetus in digital and media cooperation with the United States was reported in September 2026; the standing engagement remains one cable route. The standing engagement is a cable: the hyperscaler's own announcement of the Raman system, with partners, puts Djibouti on a route also serving Jordan, Saudi Arabia, Oman and India, at sixteen fibre pairs. No activation status for the Djibouti landing has been published since. Nothing dated inside the period adds to it. What moved in the period on international connectivity was carrier and regional: the terrestrial corridor agreed with the Ethiopian and Sudanese operators and the southward cable extension. No United States government or hyperscaler memorandum, investment or commitment appears on file. 2026-09-01 – a new impetus in digital and media cooperation between the two governments was reported (report). No instrument, sum or timetable accompanies it, so what changed is that a bilateral digital relationship is now on the record at all.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
DR Congo	A partnership covering data centres, connectivity, cybersecurity and artificial intelligence was signed in Washington, while a fintech sued the state. 2026-04 - a strategic partnership was signed on the margins of the spring meetings covering data centres, connectivity, cybersecurity, financial technology and artificial intelligence, with no value, instrument type, milestones or delivery established and the exact signing date not stated in either account. 2026-01 - a fintech filed in a United States federal court against the state and senior officials over the collapsed banking and payments modernisation project, seeking up to US\$400m on a stated investment of more than US\$72m against an agreed US\$20m state contribution never paid, with bribe-demand allegations, the government calling the signed documents a non-binding memorandum and denying the claims. No ruling, docket or government response document is held.	MIXED a digital infrastructure and cybersecurity partnership was signed while a US federal claim over a collapsed payments project seeks up to US\$400m
Egypt	A vendor named the country among the first eight for free student subscriptions to its artificial-intelligence tier. The offer did not exist at the window's opening. 2025-09-22 - a company-announced free one-year subscription for college students was to begin in the coming weeks in this and seven other African countries; no confirmation of launch, uptake figure or end date is held. It is a company announcement, and the offer is demand generation for a paid tier. Beyond it the base holds one edge cache in Cairo and one vendor partnership on Mediterranean cable capacity - so the United States relationship here runs through commercial infrastructure rather than through any government instrument.	MOVEMENT
Equatorial Guinea	No bilateral investment treaty, no active development finance project and no hyperscaler memorandum. The United States' own investment climate statement is unambiguous: no bilateral investment treaty, no active development finance project, no hyperscaler memorandum. A meeting in the window changed nothing on the record: a deputy secretary of state and the President discussed United States investment in April 2026 with no deal or memorandum named. The health ministry separately weighed a telemedicine pilot with a United States supplier, which is a commercial consideration rather than a state commitment.	NO CHANGE
Eritrea	The foreign minister met a senior presidential adviser for African affairs in September 2025, discussing renewed engagement including communication and infrastructure. The meeting at the general assembly is the first substantive bilateral engagement of the window: the foreign minister and the United States president's senior adviser for African affairs discussed renewed engagement including trade, investment, infrastructure, transportation, communication and security partnerships. It is a conversation rather than an instrument, and nothing has followed it on the base. No hyperscaler, cloud provider or technology company engagement of any kind is held for this country, from the United States or anywhere. The reason is structural as much as political: the external country assessment records the investment centre dormant and the investment law effectively suspended, so there is no route through which such an engagement would be constituted.	MOVEMENT
Eswatini	A hyperscaler memorandum was confirmed by the attorney-general to have followed Cabinet and legal consultation, and a specimen sharing agreement entered into force in January 2026. The attorney-general confirmed that Cabinet approval and legal consultation preceded signature (confirmation, partnership), and the country was represented at the vendor's continental summit with its citizen application showcased (summit, partners). The specimen sharing agreement was signed in December 2025 and entered into force on 11 January 2026. The memorandum it hangs on is not published: main texts were posted for several countries and removed, and for this country only the agreement remains posted (agreement). So the hyperscaler arrangement was contested in public and its approval route confirmed, while the health arrangement's governing memorandum was published and then withdrawn.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Ethiopia	A United States health memorandum signed in December 2025 plans US\$1,016,000,000 of support to 2030 against Ethiopia's US\$450,000,000. The memorandum covers activities from April 2026 to December 2030, states at clause 6.9 that it is not an international agreement, and was signed on the Ethiopian side by the Minister of Finance (memorandum). The United States reserves 6% of the top-line budget for its own management and operations (the same text). It is the only United States or hyperscaler engagement held: no cloud provider agreement, technology company memorandum or bilateral digital instrument is on file.	MOVEMENT
Gabon	A cybersecurity grant has disbursed US\$49,313 of US\$1,249,997 past its planned end date, and certification training runs at the embassy's cultural centre. The grant was committed in 2024 against a planned end of 22 December 2025; that date has passed with no completion, extension or further disbursement on file, leaving disbursement at 3.9 per cent of commitment on the only reading the base holds (grant). Networking-academy certification training is under way at Libreville's American Corner under a digital-skills programme, with no cohort size or completion date published (training), against a commitment first announced in June 2025 with no cohort, curriculum, start date or delivery partner (announcement). Separately, advanced talks at about US\$9bn were reported for the acquisition of a satellite operator holding spectrum authorisations and partnerships in the country, in a single secondary excerpt with no licence or counterparty named (acquisition talks).	NO CHANGE
Gambia	Satellite broadband moved from a ministerial exploration in July 2024 to a licence in 2026. The foreign ministry's readout of July 2024 records talks on launching the satellite service with no memorandum, licence or launch date agreed. The licence followed in the window and is carried on the ledger as its own row. No hyperscaler engagement — cloud, data centre or platform — is on the record for The Gambia at all.	MOVEMENT
Ghana	An applied artificial-intelligence lab opened applications in July 2026, hosted at a research centre carrying US\$37m of cumulative investment. The research and community centre has operated since 2018, and the US\$37m is the company's own cumulative aggregate rather than a new commitment (research centre); no further country investment figure has been published since (research centre). Applications for the lab opened on 1 July 2026 and closed on 31 August, with research and venture partners named and the first cohort not yet selected; no cohort size, funding figure or country-specific spend is disclosed (applications, announcement).	MOVEMENT
Guinea	United States providers of streaming, cloud, software and advertising services were brought into charge by the May 2026 decree. The decree requires a local representative to be appointed within 90 days and applies to streaming, cloud, software-as-a-service, advertising and electronic commerce (decree). It is the only instrument in the base that touches American technology companies, and it taxes them rather than partnering with them; no memorandum, investment or engagement with any of them is held.	MOVEMENT
Guinea-Bissau	No United States digital engagement is recorded for Guinea-Bissau. Nothing in the base names a United States agency, development finance instrument or cloud company in connection with Guinean digital infrastructure. The financing relationships that do exist are multilateral: the fund's extended credit facility and the US\$60m regional digital programme launched in August 2026.	NO CHANGE
Kenya	An academy proposal is unsigned and a cloud collaboration is unchanged, with no expansion, spend figure or workload detail published. The academy would be the region's first and was disclosed at a summit sideline, with no agreement, funding, cohort size or date (proposal). The cloud collaboration covers fraud detection, customer-service automation and engineer upskilling and has not moved since June 2025 (collaboration). The substantive American engagement on this ledger is elsewhere: a health cooperation framework under litigation, and an aid withdrawal that stopped inclusion programming.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Lesotho	The United States Embassy states US\$7.3bn of commercial partnerships facilitated over eighteen months, of which the data-centre project is the largest. The embassy's own figure, carried as such, is US\$7.3bn of commercial partnerships facilitated in the country over the previous eighteen months, with Kobong the largest of them (statement). The embassy also launched an artificial-intelligence skills programme under the Sebatatso initiative in June 2026 (programme). No hyperscaler commitment, data-centre region or cloud agreement with a United States provider is recorded.	MOVEMENT
Liberia	A health memorandum plans US\$26,133,684 for health data systems over 2026-2030, non-binding and subject to the availability of funds. The systems named are electronic medical records, a laboratory information system, disease surveillance and a national health information platform; planned American support across the whole memorandum is US\$124,418,400 against the country's own US\$50,725,704 (data systems). The signed text commits the country to an open-source medical record in 100 per cent of public health facilities by 2030 and gives the United States audit access to up to 5 per cent of facilities, with a data-sharing arrangement still to be negotiated and expected to run ten years, and no specimen-sharing or personal-data clause (memorandum). The text was published in March 2026 and then withdrawn, and is the subject of a federal freedom-of-information suit filed on 2 April 2026 (suit).	MOVEMENT
Libya	United States engagement runs to a research cloud on Microsoft 365 and an infrastructure memorandum between the state holding company and KBR. LPTIC signed a memorandum with KBR on 25 January 2026 covering infrastructure and 5G, with no value or timetable published (memorandum). The scientific research authority approved a higher-education platform on 4 August 2026 that it describes as built on Microsoft 365, the only named dependence on a United States cloud provider in this base (platform). No hyperscaler has a data centre, region or commitment recorded in the country.	MOVEMENT
Madagascar	No United States hyperscaler engagement is recorded; the most recent framework record is a 2019 investment climate statement. The statement records two investment-agency memoranda of 2004 covering sectors including telecommunications and information technology, though the passage naming them was not reached in the capture (statement). No hyperscaler memorandum, cloud region announcement, development finance commitment or digital cooperation agreement with the United States is held for any date since. The absence is dated and searched rather than unexamined. A separate United States bilateral health agreement, and the data-sharing agreement said to accompany it, remains withheld and in litigation.	NO CHANGE a searched absence with nothing more recent than 2019
Malawi	A feasibility-study grant for a fixed wireless and fibre access network is the whole of the record. The trade and development agency's own fact sheet names a grant for a feasibility study on expanding a fixed wireless and fibre access network in Malawi. Nothing on file says whether the study was done, what it found, or whether anything followed it. Searched at 29 August 2026, no agreement, cloud deployment, data-centre commitment or market entry by any American platform company appears anywhere in the base for this country. Against the European and Indian engagements recorded elsewhere in this report, and against a government migrating its systems to a national data centre and procuring a cloud platform for it, the absence is the finding.	NO CHANGE one feasibility grant four years old and no platform-company agreement
Mali	The United States integrated country strategy of March 2024 is the record the base holds of the channel, and it predates the current political arrangement. Nothing in the strategy is extracted here as a digital commitment, and no instrument, value or project is carried (strategy). No engagement with a United States technology company is on the record at all, which is the substance this indicator asks about.	NO CHANGE
Mauritania	The one instrument on file is a clean energy cooperation memorandum between the two energy ministries, signed in December 2023. The memorandum text is held (memorandum). No value, work programme, duration or activity under it is on the record since, and the base holds no engagement with a United States technology company at all - which is the substance this indicator asks about.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Mauritius	A hyperscaler memorandum was signed with soft scope and no disclosed value, and another hyperscaler already operates a ground station on the island. The memorandum was executed at a summit opening ceremony in July 2026 covering skills, institutional enablement and a growth pathway for local innovators, with no disclosed value or binding deliverable; the training is to run initially in premises rented for the purpose, with permanent infrastructure only a possibility (memorandum, summit). The other hyperscaler already operates a ground station serviced by the state operator, so a cable commitment would deepen a relationship rather than open one; what is contracted with either so far is skills and confidentiality, not capacity (presence).	MOVEMENT
Morocco	A vendor opened a regional research office in June 2026, while its two announced cloud regions have no record of entering service, under a science and technology framework. Two cloud regions were announced in May 2024 at about US\$140m over five years, and no held source records either entering service (regions); what the base establishes is the absence of a launch record, not that the regions failed to open (regions). The same vendor's regional research and development office was inaugurated at Agadir by the head of government in June 2026 (office). A bilateral science and technology agreement is in force under a 2023 protocol; its signed pages carry no text layer, so its operative terms and term of years are not established, and it is a science framework rather than a digital instrument (protocol).	MIXED a research office opened while two announced cloud regions have no launch record
Mozambique	A bilateral health memorandum plans US\$1.83bn of support to 2030 including US\$83m for health data systems, and partnership talks were held with a satellite operator. The memorandum was signed at Washington in December 2025 for activities running to 2030: planned United States support of US\$1,829,380,000 against Mozambique's US\$70,573,106, including US\$83,072,079 for health data systems (memorandum, record). The text carries no personal-data, data-ownership, hosting or residency clause, makes failure to fulfil the specimen and data sharing agreements grounds for changing or discontinuing assistance, and lets the United States revisit funding if a mutually acceptable technology roadmap is not finalised (assessment). A separate government-level meeting with a satellite operator discussed connectivity, digital infrastructure and small-business participation, with no agreement, amount or timetable announced (talks).	MOVEMENT
Namibia	A subsea cable landing at Swakopmund has been in service since 2022 and is the only United States technology asset in the country the base carries outside satellite licensing. The landing is cited as the connectivity leg of the case for hosting compute in the country (landing, ownership). No hyperscaler memorandum, region, data centre or commitment is recorded, and the one American satellite operator to apply for a licence was refused. So the relationship is a cable and a refusal.	NO CHANGE
Niger	A five-year, \$179.3 million health cooperation memorandum was signed in February 2026, including six integrated health information systems. The memorandum of 26 February 2026 commits up to \$107.4 million from the United States against \$71.9 million of Nigerien co-investment over five years, and includes work to establish six integrated health information systems. It followed exploratory talks in Niamey on 13 March 2026 on renewing cooperation, and was followed by a delivery of nine containers of equipment worth about \$2.3 million on 26 May 2026 to the armed forces logistics centre. No memorandum or investment commitment with an American cloud provider was located, so the indicator rests on a government-to-government engagement rather than a hyperscaler one.	MOVEMENT

COUNTRY	DEVELOPMENTS	PROGRESS
Nigeria	A hyperscaler began billing in naira, a carrier-neutral facility opened, a card network built a data centre, and a trade agency funded cloud-adoption training at a Nigerian bank. Naira billing began in January 2026, removing the foreign-exchange step from cloud spending (billing); a carrier-neutral facility opened in Lagos in June 2025 (facility) and a card network built its own data centre in November 2025 (card centre). A United States trade and development agency training grant to a Nigerian commercial bank supports its adoption of an American hyperscale cloud platform, funding training for senior managers on cloud governance and financial management; the grant amount is not stated, and the award moves a bank's workloads toward the foreign public cloud the base separately measures dependence on (grant). A US\$2m grant supports the 90,000 km fibre build alongside a feasibility grant for backbone reaching 12m people (fibre, feasibility).	MOVEMENT
Rwanda	A three-year memorandum with a frontier artificial-intelligence firm covers health and education, a hyperscaler partnership is at scoping, and a hybrid cloud deployment is the only onshore compute the base can name. The vendor memorandum was signed on 17 February 2026, non-binding, the first multi-sector government agreement of its kind in Africa; the vendor's own announcement is the only primary held (memorandum, deal). A two-day working session with a hyperscaler is the whole of the second record: the terms on which national data would sit with a foreign provider are not addressed in it (scoping). The hybrid cloud deployment launched in April 2026 with deployment count and host facilities undisclosed, and it is the only onshore compute the base can name for this country (deployment, first). Three American arrangements carry the compute, the frontier model and the scoping, and no review framework governs any of them.	MOVEMENT
Sao Tome and Principe	There is no bilateral investment or taxation treaty and the development finance corporation has run no programmes; a fiftieth-anniversary reception was held in August 2026. The State Department's country statement records bilateral investment treaties with four other states but none with the United States and no bilateral taxation treaty, that the development finance corporation is authorised to do business in the country but has run no programmes there, and that a threshold programme from 2007 to 2011 established a modern customs code (statement). A charge d'affaires visited in January 2026, meeting the prime minister and the defence minister, with discussions including the recent launch of the satellite internet service (visit). The August 2026 reception marked fifty years of relations, with the delegation visiting the coastguard headquarters and maritime operations control centre and the release naming the satellite service among recent initiatives (reception). No hyperscaler is named in any of it.	MOVEMENT
Senegal	The digital minister pitched the technology strategy in Washington with the State Department and the development finance corporation, and an exploratory meeting with an embassy delegation followed in August 2026. The Washington working sessions are reported with no date beyond the publication date, and nothing beyond talks is on record (talks). The August meeting on cybersecurity and artificial-intelligence cooperation is a meeting rather than an instrument: no memorandum, workstream, funding or timetable is reported (meeting). Against a sovereign-cloud memorandum with an American hyperscaler that has produced no build in nearly two years, the American relationship in this unit is entirely at the discussion stage.	MOVEMENT
Seychelles	The clearest United States instrument held is a 2021 maritime law-enforcement agreement; no digital or hyperscaler commitment exists. The State Department's treaty record shows the counter-illicit maritime activity agreement signed and entering into force on 27 July 2021 (record), and the full text runs to 21 articles covering boarding, jurisdiction, overflight and the use of force (text). It is law enforcement, not digital cooperation. Nothing held records a United States cloud provider, hyperscaler or digital-infrastructure commitment to Seychelles, which makes this the answer by default rather than by fit.	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Sierra Leone	Two instruments: a US\$129 million health cooperation memorandum with a data-sovereignty clause, and the US\$480 million energy compact now under a seated board. The health memorandum was signed on 22 December 2025 for five years from 2026 to 2030, over four thematic areas, with a Joint Health Cooperation Steering Committee and a stated protection of data sovereignty, regulatory authority and national development priorities (memorandum). The Millennium Challenge Account board held its inaugural meeting on 28 January 2026 under the Vice President, on a US\$480 million energy compact (board); the compact's own programme description is published by the corporation (compact). No hyperscaler engagement of any kind appears in the base. The data-sharing agreement that accompanies the health memorandum is withheld, which is recorded on that row.	MOVEMENT
Somalia	A US satellite operator was licensed in April 2025 and had a second authorised reseller by November; no other US engagement is held. The communications regulator announced the formal operating licence at a Mogadishu ceremony attended by government officials in April 2025 (announcement) — the clearest documented US-linked commercial engagement. A second local distributor announced authorised reseller status in November 2025, serving organisations, non-governmental bodies and field teams nationwide (announcement). This is a commercial market entry, not a bilateral instrument. No memorandum, financing or programme between the two governments covering digital infrastructure appears anywhere in the base.	MOVEMENT
South Africa	The state's public-service chatbot runs on a US company's open-weight models under a partnership with it, and voter registration ran inside the same company's messaging platform. Two state functions moved onto one foreign platform company inside three days of each other. The public service department's chatbot is a partnership with that company and a local supplier, built on its open-weight model family, serving policy, circular and legislation lookups to citizens and public servants. The electoral commission ran voter registration inside its messaging platform for the three days before the deadline, carrying one-time-password authentication, identity-document upload and address verification, and 1.7m registration transactions over the final weekend. Neither is a signed public commitment of the kind this indicator usually records, and that is the point: no memorandum, contract value, data-handling statement or exit arrangement is published for either. What the base holds is two live dependencies and no instrument behind them. Separately, the enterprise AI adoption reported under sectoral systems runs on a foreign cloud provider, and the satellite entrants reported under connectivity are the same country's.	MOVEMENT
South Sudan	The e-Government contractor was sanctioned by the United States in May 2026, on a secondary-sourced account with no designation notice held. The sanction is reported secondarily and no designation notice is held (sanction). The company sanctioned is the one holding the exclusive e-government concession through which the visa portal and the tax platform run, so a sanctions designation and the state's principal digital service channel are the same entity.	MOVEMENT
Sudan	The standing instrument is a 2021 memorandum for up to USD 1 billion covering sectors including 5G, with no agreement recorded in force since. The export credit agency and the government signed a memorandum to explore up to USD 1 billion in export financing across infrastructure, energy, agriculture, health care, mining, 5G and water (announcement). The State Department's own later investment climate statement recorded no active development finance or investment guaranty agreement in force after the 2021 military takeover, so the memorandum stands without an instrument behind it. The one US commitment inside the window is humanitarian rather than digital: USD 200 million to a humanitarian fund at a February 2026 event that raised USD 1.5 billion in pledges (event).	NO CHANGE

COUNTRY	DEVELOPMENTS	PROGRESS
Tanzania	A 2023 package carries export financing and a 5G-security memorandum; a US-backed developer plans a Tanzanian data centre. The March 2023 package includes an export-financing memorandum of up to 500 million dollars covering digital technology, and a 5G-security and cyber-cooperation memorandum signed on 27 March 2023. A Tanzanian organisation was selected in June 2026 for a hyperscaler social entrepreneur accelerator, gaining cloud and artificial-intelligence technical support. A data-centre developer whose major shareholder is American-founded passed 380 million dollars of committed capital in July 2026, with a Tanzanian carrier-neutral facility in its pipeline. The capital funds multi-country growth rather than a bounded Tanzanian allocation, and no hyperscaler-owned deployment in the country is held.	MOVEMENT
Togo	The United States terminated its threshold programme on 18 December 2025, with US\$11.1 million of US\$20.5 million committed. The grant agreement signed 14 February 2019 and in force from 27 November 2020 was the most formal United States instrument with Togo bearing on this sector, its project covering regulatory independence for the telecoms regulator, sector competition, the universal service fund and expansion of access. The board voted to terminate in August 2025 and the programme ended on 18 December 2025, with US\$11,085,643 of the project's US\$20,500,000 committed and US\$7,456,920 spent at 30 June 2025. The only other United States digital engagement found in the period is small: an embassy grant training 50 young entrepreneurs to use artificial intelligence on smartphones across five regions.	REGRESSED
Tunisia	A hyperscaler deployment at the second operator and an embassy platform handed to the business chamber are what the record holds; there is no state-level instrument. An embassy-funded fintech programme in 2021 paired Tunisian startups with Amazon Web Services, IBM and Microsoft, each participating startup receiving 11,500 dollars of free cloud services; its continuation past the project term is unconfirmed. The second mobile operator announced in December 2025 a Google Cloud deployment of Vertex AI and Gemini models through a managed-services partner, for marketing and customer engagement. A 3.3 million dollar American business-support project running since 2019 closed in June 2026, its matchmaking platform handed to the American chamber of commerce. No hyperscaler-specific memorandum, capital investment or state-level instrument is held, which is what the gap this settles was asking for.	MOVEMENT
Uganda	A United States health-data access agreement was signed in December 2025 for activities to 2030, and two accounts describe different instruments rather than a conflict. The signed memorandum is held and only provides for a future data sharing agreement at a numbered clause; a published investigation says it reviewed that agreement directly and describes direct, real-time access to nine systems for seven years. The two accounts describe different instruments, not a conflict (agreement, memorandum, record, investigation). Distinguishing the memorandum from the agreement it provides for is the whole of the reconciliation, and it is what stops this reading as either a denial or an exposé.	MIXED a signed health memorandum providing only for a future agreement while an investigation describes direct real-time access to nine systems
Zambia	A United States health financing memorandum was reported shelved over data terms and a minerals precondition, and the health minister denied the mining link and was dismissed three days later without explanation. The memorandum was reported shelved in May 2026 (shelving, exploitation, rejection). The minister denied the mining link on 15 February 2026 and was dismissed three days later without explanation. The 25-year data term is reported from a leaked draft rather than a text this base holds, and the value is given as US\$1.012bn in that draft and as up to US\$2bn by the foreign minister in May 2026, with the two unreconciled (stress test, investigation). A country declining a health financing agreement over its data terms is rare in this frame and is recorded as the position it is.	STALLED

COUNTRY	DEVELOPMENTS	PROGRESS
Zimbabwe	The country withdrew from bilateral health cooperation talks citing sovereignty, and the two figures for the offer are unclosable because both are the same party's statements about an unsigned instrument. Withdrawal followed a presidential memo of December 2025; the model instruments were resolved in August 2026 and the gap between the two stated values is unclosable because both figures are the same party's statements about an unsigned offer (withdrawal, sovereignty, model, dispute, fact-check). A cloud partner experience centre opened at a summit; the facility is in a neighbouring country and the domestic interest is ownership rather than siting (centre). Two countries in this frame declined the same health arrangement over its data terms, which makes it a pattern rather than an incident.	STALLED
