

## MONTHLY UPDATE

# Zimbabwe: monthly update, July 2026

Edition of 2026-08-21 · 79 systems and instruments tracked, 9 of them not held

*Developments recorded from artefacts published between 2026-07-01 and 2026-08-21 — July 2026 carried forward to the date of issue, so the report holds the nightly catch to the day it was cut. Sections follow the status report.*

## Summary of the month

The ICT minister launched a whole-of-government resource planning system on 29 July 2026 and committed to an artificial-intelligence ethics framework tabled by the end of the first quarter of 2027, mandated open interface standards for public-sector platforms, and a ring-fenced share of the universal services fund for public-good projects, stating no amount ([launch account](#)).

Two measured positions were published in the same weeks and point in opposite directions. The 2025 household survey put household internet access at 75.5%, up from 50.1% in 2020, and household computer ownership down to 11.2% from 14.2% ([survey account](#)). The central bank reported 511.1 million electronic transactions worth ZiG1.37 trillion in the half year, against a researcher's finding that only about 20,000 cards are in active use ([conference account](#)).

The health minister told the National Assembly on 17 July that more than 400 rural health facilities hold satellite kits that have never been switched on ([National Assembly account](#)).

## Infrastructure

### Connectivity

Phase 1 of the cross-border fibre corridor from Plumtree to Bulawayo was reported live and carrying traffic on 3 July 2026, at an initial equipped capacity of 800 Gbps on equipment rated above 10 Tbps; phase 2 to Livingstone is due in September 2026 ([corridor account](#)).

The listed infrastructure company reported for the quarter ended May 2026 that it deployed 90 new base stations and reinvested 17% of revenue into capital projects on an undisclosed revenue base ([trading update](#)).

The state fixed operator's chief executive told its annual general meeting on 26 June that government arrears had risen to close to US\$42m, also given as ZiG1.2bn, from US\$19.2m a year earlier ([annual general meeting account](#)). The state mobile operator terminated its chief executive's contract on 4 August following a board resolution ([termination account](#)).

## Data Storage

The ICT ministry's 29 July address named a national high-performance computing centre, the state fixed operator and a private operator's data centre — the listed infrastructure company's Harare technology park among them — as the infrastructural spine for future government artificial intelligence ([launch account](#)).

## Energy

The listed infrastructure company commenced phase 1 of a 100 MW solar farm for its technology park, and its fuel-management system was credited with reducing energy consumption on tower sites, with no percentage, litre, cost or uptime figure given ([trading update](#)).

## Cybersecurity

The national incident response team is named in the ICT ministry's own priority projects and has no completion date or operating status attached. The international project record behind it [carries an empty status field and an achievements field still stating it will be updated on completion](#), for a project that ran from July 2017 to February 2021. What is new is the first-party statement: the [ministry lists establishment of the team among its seven priorities](#), aimed at monitoring, detecting and responding to cyber threats.

## Digital public infrastructure

### Data Exchange

A whole-of-government enterprise resource planning system, integrating finance, human resources, supply chain and asset management across the public sector, was launched on 29 July 2026 and presented by the ministry as the clean data layer any government artificial intelligence would need; no ministry count, deployment schedule or cost was stated ([launch account](#)). The ministry also committed to mandated open interface standards for public-sector platforms, publishing neither a standard nor a compliance deadline ([launch account](#)).

The online border management system Zimbabwe has been rolling out in phases since January 2025 was examined during a Rwandan immigration delegation's visit to two border posts on 29 July; no port coverage, completion date or throughput figure is published ([visit account](#)).

### Digital Identity and CRVS

A deputy registrar general told a meeting of African registrars general on 24 July that electronic passport enrolment centres operate in ten districts, eight provincial centres and one abroad, with seven-day issuance away from the capital ([meeting account](#)).

The registration end of the same estate is being rebuilt with donor money. [Ten civil registry sub-offices across eight districts are being computerised, digitalised and solar-powered under a China-funded project with UNICEF](#), to widen birth-registration access in underserved communities through mobile registration and outreach alongside existing water, sanitation and nutrition platforms. No value, timetable, district list or birth-registration baseline is stated, so there is nothing to measure the effect against.

## Digital Payments and Fintech

The road authority took handover of an expanded toll plaza on 29 July with two of six lanes reserved for radio-frequency tag holders, a second plaza due the next day and a third under construction, against a stated programme covering all 29 tollgates; the announcement states nothing on retention, access or legal basis for the movement record the tags generate ([handover account](#)).

The switch operator reported interoperable quick-response payments in rollout and participation in a pan-African settlement system, with no merchant, acceptance-point or transaction count ([conference account](#)).

Acceptance also widened from outside. A commercial bank and an international card scheme [opened online acceptance of that scheme's cards to participating merchants in nine African markets including Zimbabwe on 19 August](#), settling in local currency, US dollars or both; the merchant count is given for the nine markets together and not for Zimbabwe.

## Registries (population, land, address, etc.)

The same registrars-general meeting heard that all ten provinces and 63 districts are computerised for civil registration but only more than 20 of 209 sub-offices ([meeting account](#)).

The transfer of voter registration and roll management from the electoral commission to the registrar-general, begun under the third constitutional amendment, is under way, with no date, transition plan or safeguard stated ([Senate account](#)).

## Sectoral management information systems (HMIS, EMIS, etc.)

The national electronic medical record reached [1,254 of a planned 1,900 health facilities](#), on a health financing partner's account rather than the ministry's. The [platform's own front page describes it as the national health operating system](#), spanning care-finding, provider verification, medicines and diagnostics directories, virtual care, an assistant and public health notices — run largely without a citizen account and gated by a separate professional-authority check — and carries no facility-coverage figure and no last-updated date of its own. An operator separately reports [more than 20 telehealth centres established](#), company-reported to an anniversary feature with no patient, consultation or availability figure.

## Other GovTech and e-Gov

An implementing partner reported on 28 July that it had been building artificial-intelligence competency among research, committee and budget-office staff in Zimbabwe's Parliament, and that staff were using public tools on personal judgment, with limited monitoring of data flows into those platforms and no consistent approach to identifying fabricated output ([partner account](#)).

The same capacity gap shows in the state's own books. The Auditor-General found that [only 26 local authorities submitted their 2024 financial statements on time, while the revenue authority pushes businesses onto its fiscalisation data management system](#) — a reporting failure inside government that the revenue drive does not address. The denominator of local authorities is not given in the record held, so the share filing on time cannot be stated.

## Rural digital data capture

The ICT minister told the National Assembly on 17 July that the universal services fund currently covers satellite-kit subscriptions only for digital centres and schools, and only for one year ([National Assembly account](#)).

Schools are where the terminals have gone. The education minister told the Senate that [11,500 satellite terminals have been distributed to schools — 8,000 to those with no wireless network and 3,500 to those already connected — with more than 1,300 institutions still to reach and a target of internet connectivity, solar power and national-grid access at every school by December 2026](#), alongside a cabinet commitment of 3% of GDP to research and innovation. The counts and the target are the minister's own; no school total, verification of installed and working terminals, or recurrent connectivity cost is stated — and the same fund that bought them pays a subscription for one year only.

## Digitalisation of sub-national government

The base's first evidence on the subnational tier is one council's own statement. Kwekwe City Council [bills rates, refuse, sewerage and water centrally through a municipal resource-planning package, each property carrying a unique account number and tariff code](#), and names information technology and e-governance among its finance department's five key functions. No user count, collection rate or digital-channel adoption figure is published, and nothing establishes the council as representative of other local authorities.

## National statistics

The 2025 household survey, released on 20 July, reported household internet access at 75.5% against 50.1% in 2020, mobile handset ownership at 96.4%, and household computer ownership down to 11.2% from 14.2%, at 21.2% urban against 4.7% rural ([survey account](#)).

## Governance and regulation

### Legislation and regulation

The regulator ran a notice in the press on 26 July setting mandatory data-protection inspections from 1 September 2026, with a registration threshold of 50 data subjects, licence fees in four tiers, a US\$30 application fee, and journalistic, historical and archival processing exempt from the Act but still required to register ([notice account](#)).

The justice minister told the Senate on 23 July that government has begun implementing the third constitutional amendment, transferring voter registration and management of the roll from the electoral commission to the registrar-general, and characterised the 2013 transfer to the commission as a response to legacy issues now considered resolved; no date, transition plan or safeguard was stated ([Senate account](#)).

### Strategies, plans and policies

The ICT ministry committed on 29 July to an artificial-intelligence ethics framework tabled by the end of the first quarter of 2027, publishing neither a standard nor a compliance deadline ([launch account](#)).

## Regional collaboration

A Rwandan immigration delegation toured two border posts on 29 July under a 2024 bilateral memorandum ([visit account](#)).

Harare then hosted the regional attempt to write common rules for the thing all these systems run on. Southern African regulators, data-protection authorities and artificial-intelligence task forces [met for a three-day workshop to harmonise national data-governance rules](#), anchored to the African Union data policy framework, a continental data governance blueprint, the regional data strategy and a UNESCO toolkit, with the convening body noting that only 1% of data-centre capacity sits within Africa. No outcome document, commitment or timetable from it is held.

## Data protection

Certification of every data protection officer is required under the same 26 July notice, at US\$1,250 for a Zimbabwean ([notice account](#)).

August brought the objections. Healthcare providers and the medical association [objected to the data-controller licensing regime as applied to them](#) — roughly US\$300 a year plus a mandatory data protection officer — [calling it costly and duplicative of existing health-professions regulation](#) ahead of the September inspections, and a published analysis [argued the regulator's threshold-based licensing model is disproportionately burdensome for small entities](#) against the risk-based approach of the European regulation it is compared with. The statutory instrument's fee schedule is not held, and no licence count, exemption or regulator response to the objections is on record.

Two further protection questions surfaced without a regulator attached. The anti-corruption commission is [investigating cyber-enabled fraud across three state digital systems](#): suspected manipulation of the driver-licensing platform, a US\$150m diversion of state mobile-operator airtime with a criminal case pending and asset forfeiture completed, and a scheme crediting more than ZiG55m and US\$260,000 of fictitious prepayments on the revenue authority's customs platform. And the National Child Online Protection Policy 2026-2030, [approved by Cabinet in June, has no reporting route, responder training or funded rollout on record](#) — which is what a published analysis argues will decide whether it protects anyone.

## Open data

A [national data commons was announced on 4 August](#) for public institutions, industry and researchers to share anonymised datasets, with selected government datasets stated to become publicly accessible within six months. No governing rule, dataset list or portal is held.

## Artificial intelligence and the technology sector

### AI

The same 29 July address committed to indigenous-language corpora work led by universities ([launch account](#)).

The listed infrastructure company described its remote monitoring system and digital twin as advancing rather than in production for the quarter ended May 2026 ([trading update](#)).

## ICT Industry

The infrastructure company reported [90 new base stations in the quarter to May](#) and [17% of revenue reinvested into capital projects](#), on an undisclosed revenue base — so the ratio cannot be converted to a value.

## US / hyperscaler activities

Zimbabwe withdrew from the bilateral health talks, and the dispute over why was settled this month against the templates rather than the parties. Harare's account is that talks ended over long-term United States access to national health data and an attempt to fold in critical minerals; the [embassy stated the conditions were co-investment, financial accountability and specimen sharing during outbreaks, and that assertions it sought Zimbabweans' personal data are categorically false](#). Both are supportable. The [model data-sharing agreement](#) gives the United States secure, uninterrupted access, expressly including login credentials, to seven national health systems for [twenty-five years continuing ten years past termination](#) — and in the same clause tells the partner not to provide individual-level or personally identifiable data unless there is no other way. The [template memorandum](#) requires [physical specimens and related genetic sequence data of pathogens with epidemic potential within five days of detection, for twenty-five years](#). Harare is describing standing credentialled access to live systems; Washington is denying transfer of identifiable records. Neither template is the Zimbabwe draft, which was never signed and does not exist as a public document. [About 1.2m people on United States-supported HIV treatment face wind-down](#).

## Inclusion and capacity

### Digital divides

The 2025 household survey puts [household internet access at 75.5% and mobile handset ownership at 96.4%](#), rural [94.5% against urban 99.2%](#). Computer ownership is the divide the handset figures conceal: [11.2% of households, urban 21.2% against rural 4.7%](#). The two measures are five years apart and the intervening trend is not held.

### Access to services

The health minister told the National Assembly on 17 July that more than 400 health facilities had received satellite kits with 300 more to be added, but that subscriptions had not been paid because the fees were too high ([National Assembly account](#)).

At a payments conference on 24 July a research firm reported that 95% of transport payments remain cash, that 56% of respondents found digital systems complicated with people with disabilities particularly affected ([conference account](#)).

A media institute's August review sets the country's headline connectivity figure against what it costs. It records [internet penetration at 84.55% on the regulator's fourth-quarter 2025 data](#), many households spending more than [10% of income to be online against the United Nations' 2% benchmark](#), and only [62% of the population with reliable electricity](#), and asks whether the 2026-2030 artificial-intelligence strategy can be delivered on those foundations. The penetration figure counts active subscriptions rather than individual users, which is the gap the affordability finding sits in.

## Training and skills

The ICT minister told a small-business meeting on 17 July that a digital skills programme targets 1.5 million people ([meeting account](#)).

## Finance

### New investments

The ICT minister also committed on 29 July to ring-fencing a share of the universal services fund for public-good artificial-intelligence projects, stating no amount ([launch account](#)).

Two external commitments arrived in August, and only one of them has a number attached to Zimbabwe. A United Nations contract award of 10 August [puts US\\$5,947,948 into the supply of ICT equipment to the country](#) – an exact figure against a purpose stated as nothing more than ICT equipment, with neither the receiving government body nor the awarded vendor named. The United Kingdom separately [opened expressions of interest for a Southern Africa science and technology accelerator worth up to GBP2.5m to March 2030](#), naming Zimbabwe and Zambia as its first year's focus with South Africa the primary one. No Zimbabwean allocation is stated and no delivery consortium has been chosen.

A third is a conversation. The President met a delegation from an emirate government and a technology company at State House on 8 August to [explore a digitisation partnership for aviation and border security](#), aimed at modernising immigration and border-management systems. Talks only, and no instrument, value, scope or data-protection provision is stated for systems that would process traveller data.

### MoUs and other agreements

The cross-border fibre corridor from Plumtree to Bulawayo runs under a public-private partnership signed in June 2025; no investment amount was disclosed by either party ([corridor account](#)).

---

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
