

MONTHLY UPDATE

Djibouti: monthly update, July 2026

Edition of 2026-08-09 · 15 systems and instruments tracked, 11 of them not held

Developments recorded from artefacts published between 2026-07-01 and 2026-08-09 – July 2026 carried forward to the date of issue, so the report holds the nightly catch to the day it was cut. Sections follow the status report.

Summary of the month

The month's largest item is a memorandum. On 19 July 2026 Djibouti and the Chinese LinkWise Group [signed a protocole d'accord](#) stated at US\$1.35bn for a 100 MW AI compute centre, up to 500 MW of renewable generation and an AI special economic zone; four days later the signing minister [set out its terms on the record](#), including 1,000 hectares of land, guaranteed seawater abstraction for cooling, a policy-stability clause and a tax-exemption period.

Two accounts of the state's own records followed in early August: one [describes 126 years of the Journal officiel published online](#), the other [police body cameras in routine use](#) with no published instrument governing the footage.

Infrastructure

On 19 July 2026 the state signed a memorandum of understanding with the Shanghai-based LinkWise Group, [stated at US\\$1.35bn and carried in full by the investor with no state equity and no sovereign debt](#), for a 100 MW AI compute centre, a digital industrial park, international data corridors and up to 500 MW of solar, wind and storage, valid one year. In [an interview published on 23 July](#) the minister-delegate for investment gave the terms: 1,000 hectares of land, guaranteed seawater abstraction for cooling, a policy-stability clause presented as a legal guarantee of long-term investor return, a tax-exemption period before revenue accrues to the state, technical training in place of local employment quotas, and cryptographic compute in the revenue model alongside AI. The preparatory phase runs six months from signature; nothing is disbursed and no site is held. The 100 MW and 500 MW figures are the promoters' own.

On 3 August 2026 the Italian foundation Med-Or reported that a [project promoted by Italy's foreign ministry with Med-Or is building the Djiboutian authorities' capability to inspect and protect the submarine cables](#), under a memorandum with the Ministry of Economy and Finance covering critical infrastructure, digital connectivity and strategic dialogue. Med-Or's figures put 12 cables landing in Djibouti, six connected to Italy, and about 18% of international submarine cable data transiting the country. No amount, term or delivery date is stated and the memorandum is not held.

On 29 July the new communications minister [received Japan's ambassador and the UN resident coordinator in succession](#), covering audiovisual media re-equipment, journalist training against disinformation, and the strategic weight of the cables. No agreement was signed and no figure was given.

Digital public infrastructure

Two interviews of 23 July 2026 put the identity stack on the record in detail. The Direction générale de la Population et de la Famille [enrols fingerprints, iris, photograph and electronic signature into the Registre national des personnes physiques and issues each citizen a national identification number](#); its director-general states the card has been issued nationwide since 2025 and that mobile kits reach the elderly, the hospitalised and remote populations. Automatic comparison against the national base is returning duplicate registrations, birth-date contradictions decades old, and people who have lived their administrative lives under a dead person's identity; those cases go to the parquet for judicial regularisation.

The same account [names an ID Mobile credential, an online services portal and real-time card verification for banks and social-protection bodies as in preparation](#), with birth, marriage and death archives being digitised in parallel and staffing and archive space named as the constraints. No date is given for any of them.

On 2 August 2026 the Secrétariat général du Gouvernement and UNDP [signed a letter of accord to digitise the SGG's paper archives](#) — indexing, scanning, capacity building for national teams, and secure backup at the ANSIE data centre. It follows a state-funded programme running since 2023 which the parties report has transferred several thousand archive boxes to the National Archives and produced over 200,000 secured digital files for the Presidency. From September 2026 it extends to the audit and integrity institutions — the Chambre des Comptes, the two financial inspectorates, the anti-corruption commission, the public accounts directorate and the human-rights commission. The accord's text, value and duration are not stated.

Governance and regulation

On 4 August 2026 the state daily *La Nation* [described the Police Nationale and road-safety officers carrying body-worn cameras routinely in central Djibouti](#), not piloting them. The protocols it reports require the device to be worn visibly and the subject to be told they are being recorded, with recording triggered manually or automatically according to the type of intervention or the threat level detected. No retention period, access rule, data controller or authorising instrument is named, and nothing on file establishes one as at 4 August 2026. The Digital Code's prior-authorisation regime, in force since 30 June 2025, reaches biometric processing, and no authorisation or published rule covering the camera fleet is held.

The account of the archive programme published on 3 August also [establishes that 126 years of the Journal officiel are digitised and published online](#). The account gives no date for when publication began.

At WSIS 2026 in Geneva on 9 July the communications minister [restated Vision Djibouti 2035 as the frame for a regional technology hub and sought ITU and Smart Africa support for public-service digitalisation and AI capacity](#). No instrument resulted.

Artificial intelligence and the technology sector

On 4 July 2026 the Ministry Delegate for the Digital Economy and Innovation [launched the LIMO platform](#), described by the ministry as support for entrepreneurship and for access to opportunities by startups and developers. The account is a trade-press report of the ministry's announcement, no user or service figures are published, and it is a distinct system from the private marketplace of the same name.

On 17 July an upgraded AI weather early-warning system was [handed over at the World AI Conference in Shanghai](#). Version 2.0 adds observation and autonomous alerting through smart terminals combining satellite, ground data and forecast models, and sharpens forecast resolution to 3 km from 9 km. The first system was supplied by the China Meteorological Administration in July 2025 and entered service in December 2025.

The LinkWise interview of 23 July also [named a cross-border data corridor linking Shanghai to Djibouti among the arrangement's success indicators, alongside full Djiboutian jurisdiction over data natively generated on the territory](#), with chips specified as NVIDIA H and B series. The memorandum text is not held; the terms are the minister's account.

Inclusion, capacity and finance

No development in inclusion, capacity or finance is recorded for this period: the month's only finance item is the LinkWise memorandum, covered under infrastructure.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
