

MONTHLY UPDATE

Gambia: monthly update, July 2026

Edition of 2026-08-09 · 20 systems and instruments tracked, 14 of them not held

Developments recorded from artefacts published between 2026-07-01 and 2026-08-09 – July 2026 carried forward to the date of issue, so the report holds the nightly catch to the day it was cut. Sections follow the status report.

Summary of the month

Within nine days the country's identity spine, its sovereign hosting and its mobile network all changed state: the identity system and the state's first data centre entered service on 1 July, and 80% of the state mobile operator passed to a private buyer on 9 July. The second cluster is revenue administration — between 20 July and 4 August the Accountant General signed in a new collection platform, customs agreed a data-exchange roadmap with Senegal, and the finance ministry gave its fullest account yet of what digitalised collection has recovered.

Infrastructure

President Barrow [inaugurated the National Data Centre at Abuko on 1 July 2026](#) alongside the identity system it hosts — the second data centre in ten weeks, and the first in state hands. No capacity, tier rating, operating cost or operator is stated, and the [account carried by the identity industry press](#) adds none of them. Nothing published bears on the backbone or on satellite licensing.

Digital public infrastructure

The [National Identity Management System went live on 1 July 2026](#), issuing GAM ID cards on the spot, with nationwide enrolment from 4 August 2026. No enrolment or issuance figure has been published since, so its reach is unestablished.

Government collection acquired a fourth channel. The Office of the Accountant General [signed a memorandum integrating the SUTURA platform into revenue collection](#), reported on 20 July 2026 — domestically built, distributed through the postal service, alongside the Yonna Wallet arrangement of March 2026. The Deputy Accountant General said several commercial banks are already integrated; the text is not held and no go-live date, volume or fee structure is given.

Cross-border exchange moved further than domestic exchange did. At Saly on [16-17 July 2026 Gambian and Senegalese customs agreed a three-month roadmap](#): install GAINDE at three border posts, deploy SIGMAT for real-time transit tracking, exchange customs data by interface once GAINDE is live, replace transit agents with a Single Administrative Document and reactivate the EnCen platform.

The revenue authority said on [30 July 2026](#) that [South African and Rwandan customs officials will study its digital excise tax stamp](#), after officials from Nigeria, Senegal and Sierra Leone; the commissioner general attached to it a claimed 95% reduction in smuggling of excisable goods, a figure with no method, made by the authority whose system is being studied. The finance ministry also [named a planned Integrated Tax Administration System](#), with no procurement, vendor or timetable.

Statistics had the period's clearest institutional step. The Bureau of Statistics [disseminated the fifth labour force survey in late July 2026](#) with a [companion volume comparing the 2023, 2025 and 2026 rounds](#) — participation at 54.5% against 43.6% in 2023, unemployment at 6.2% against 7.6%. The [findings report puts the agriculture share of employment at 17.8%](#), which reflects the 19th ICLS standard excluding own-use food production and is not comparable with earlier rounds. The Central Bank had [convened producers and users two days earlier](#), naming data gaps, inconsistency and inaccessibility as the constraints.

The trade ministry said on [4 August 2026](#) that [a Digital Single Window Business Registration System is being finalised](#), with no launch date.

Governance and regulation

The Communications Bill 2025 stayed in committee. Two Assembly committees [met the Press Union and the Media Council on 18 July 2026](#); the Union set out the media laws it wants repealed alongside the bill, and members said they could take stakeholder views into committee but not debate it publicly.

A second instrument was validated on [31 July 2026: the State Intelligence Service Bill](#), at a workshop attended by the National Security Adviser, the Chief of Defence Staff, the Assembly's defence committee and civil society. The Adviser said the draft prohibits torture, unlawful detention and political targeting, requires judicial warrants and oversight for intrusive measures, and gives the Assembly review of the Service's budgets. Its threat frame is cybercrime, espionage, disinformation and organised crime, so it is where Gambian communications interception would sit. The text is not held, the Bill has not been tabled, and it does not appear in the Assembly's bills library, checked 2026-08-08.

The revenue authority [hosted the seventh ATAF Heads of Tax Administrations Master Class in Banjul on 23-24 July 2026](#). The Forum's executive secretary argued from Rwanda, Kenya and Morocco that digital systems deliver only alongside governance reform — "technology alone collects nothing" — and [pressed for a united African position at the United Nations](#).

Artificial intelligence and the technology sector

GAMTEL and YCELL [signed the Share Investment and Network Modernization Agreement on 9 July 2026](#), transferring an 80% equity stake in GAMCEL and committing GMD 6.1 billion to modernisation: nationwide 4G and 5G radio access, core upgrades, next-generation operations and billing systems, a new head office, hybrid tower power and revenue assurance. It closes a process the government [described to lawmakers in December 2025 as a D6.7 billion winning bid](#), about D800m of it a direct payment for the shares. The two figures are not reconciled in anything held.

Nothing published bears on artificial intelligence; the one other item is a [youth innovation showcase on 9 July 2026](#).

Inclusion, capacity and finance

The finance ministry gave its fullest account yet of what digitalised collection has recovered. On [30 July 2026 the minister said total tax collected rose from D11 billion in 2022 to D25 billion in 2025](#), with rate rises only on gambling, alcohol and tobacco, and credited a named stack running from ASYCUDA World and digital excise stamps to fuel marking, rental tax digitalisation and electronic invoicing. He read reforms lifting collections by more than 100% as evidence of prior leakage rather than of under-taxation, and said tax to GDP moved from [9% in 2022 to 13% in 2025](#). It is an attribution by the collecting side, not an evaluation.

Four days later the revenue authority [published a 2026 target of D27.5 billion](#) — the first forward number in the series, and the first testable one. The implied step from 2025 is about a tenth, far below the run rate the attribution rests on.

On the demand side, an [account published on 30 July 2026](#) records 400 rural women and girls trained across four regions between September 2025 and March 2026 in safe internet use, online privacy and data protection. Its implementer names unreliable internet, high data costs and unreliable electricity as the obstacles to continued practice — the only field statement in this period on what access costs a household.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
