

MONTHLY UPDATE

Mali: monthly update, July 2026

Edition of 2026-08-10 · 35 systems and instruments tracked, 7 of them not held

Developments recorded from artefacts published between 2026-07-01 and 2026-08-10 – July 2026 carried forward to the date of issue, so the report holds the nightly catch to the day it was cut. Sections follow the status report.

Summary of the month

The window is dominated by two events: the [4th Semaine du Numerique](#), held at the CICB from 28 July to 1 August 2026, which produced a recommendation set covering a national AI strategy, a data-management law, a startups law, a Conseil national du Numerique and a law making SMTD-SA the sole operator of national transport infrastructure; and the [11th board session of the universal access fund on 23 July](#), which cut the 2026 budget by 32%.

Two justice items ran in sequence: a [ministerial instruction to prosecutors on platform content on 29 July](#), and on 3 August a [12-month sentence, six suspended, against a newspaper publication director](#) before the cybercrime pole.

Infrastructure

On 15 July CSquared [added capacity on the 2Africa West subsea system](#) to the West African backbone whose inland fibre reaches Mali, giving an independent route behind the Abidjan, Accra and Lagos landings.

On 23 July Moov Africa Malitel [announced the retirement of ADSL and migration to FTTH by end-2026](#); no subscriber or coverage figure accompanied it.

On 27 July Maliweb carried a named-analyst investigation into the universal access fund which also [reports AFRIBONE as the sole surviving independent internet provider](#), buying wholesale IP transit at near-retail prices after incumbents allegedly pressed the backbone operator to stop selling dark fibre.

On 30 July the Semaine du Numerique's opening panel [set a universal connectivity target of 2030](#), with the roadmap to be drafted jointly with Burkina Faso and Niger. On 1 August the week's recommendations included [a law making SMTD-SA the sole national operator of transport, transmission, storage and broadcast infrastructure](#).

Digital public infrastructure

On 8 July the health ministry [launched the national digital health portal](#) under the national digital health plan 2024-2028, flagging power gaps, the urban-rural divide and weak interoperability as obstacles.

On 21 July an editorial account [set out the E-AES passport's specification](#): five categories issued under the confederation dispositif, five years, 34 pages, biometrics on chip, to ICAO specification.

On 24 July the Council of Ministers [adopted a draft ordinance formalising the cahier de recensement](#), the village-level register from which family record books are issued, replacing Loi n06-023 of 28 June 2006. The same session heard the labour ministry report Mali's integrated human resources system to the pan-African public administration forum in Rabat.

On 27 July a ministry field visit [recorded the social security fund's bank-payment pilot for pensions as complete](#) and ready for phased rollout, and documented a Bamako hospital running registration, laboratory, consultation and pharmacy on a single unique patient identifier.

On 29 July the Council of Ministers took note of the first published output of the government monitoring system: [43.43% of planned activities completed in the second half of 2025 — 109 of 251, with 83 in progress and 59 not started](#).

On 30 July the territorial administration ministry [put digital payment at civil registry centres at about FCFA 200 million between July 2024 and May 2026](#) and ordered every collectivite to report within 30 days on why the system is underperforming.

Governance and regulation

On 15 July, at the UEMOA digital economy salon in Ouagadougou, Mali [spoke for the three AES states and the salon adopted a Declaration de Ouagadougou](#) recommending that member governments place digital at the centre of national strategies.

On 24 July Mali was [re-elected to the African Telecommunications Union board for 2027-2031](#) at the Abuja plenipotentiary.

On 29 July the Garde des Sceaux [instructed all prosecutors, justices of the peace and judicial police to act against networks recruiting through WhatsApp, TikTok and Snapchat](#). The communique enumerates existing penal qualifications and adds that the staging, filming, publication and commentary of such images are themselves offences falling under cybercrime; no new statute was made, no platform was notified, and parents, educators, landlords and hotel keepers are called on to watch and denounce.

On 1 August the Semaine du Numerique's recommendations included [a data-management law, a startups law, a Conseil national du Numerique and a protocol between AES states to harmonise AI governance](#).

On 3 August the [data-protection authority opened its second 2026 session](#) with more than 1,000 files before it over ten days — authorisations, declarations, video-surveillance oversight, formal notices and direct sanction procedures — its president grounding the sanctions in Loi n2013-015 as amended. The same day the cybercrime pole [sentenced Chahana Takiou to 12 months with six suspended](#) on a charge of undermining the credit of the state through the judicial institution, over remarks at a Bamako media forum in June 2026 arguing that journalists should be tried under press-offence law.

Artificial intelligence and the technology sector

On 1 August the Semaine du Numerique [recommended a national AI strategy](#), which Mali does not have, alongside an AES protocol on AI governance. The [Centre d'intelligence artificielle et de robotique](#) closed the week with a [demonstration of a locally built intrusion-detection technology](#).

Inclusion, capacity and finance

On 22 July the universal access fund [signed two four-year renewable conventions](#) with the education ministry and the entrepreneurship, employment and vocational training ministry, committing it to connect every secondary, technical and vocational school by end-2027, with more than 80 new universal access centres, 100 new Cases Wi-Fi and cumulative education spend put above FCFA 17bn. The same day an operator [reported 350 young people placed on the labour market](#) from its digital centre.

On 23 July the fund's board [cut the 2026 budget by 32%, from FCFA 41,151,471,000 to FCFA 27,886,688,000](#), recording receipts at 56% of forecast and expenditure of FCFA 3,188,967,162 — 8% of the annual budget in six months. The board attributed the shortfall to the absence of a procedures manual, late budget approval, delayed sign-off on construction studies and insecurity in project areas, and named a new director-general.

On 30 July UNESCO and Japan [handed the education ministry FCFA 88,740,927 of equipment for eight teacher-training institutes](#) — 40 laptops, 16 all-in-one computers, 32 tablets, and projectors, whiteboards, printers and backup devices — with no maintenance, connectivity or software provision stated.

On 1 August recruitment opened for the first cohort of a [digital-skills programme for 15,000 young people](#) run under a convention with the Association Kabakoo.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
