

MONTHLY UPDATE

Mauritania: monthly update, July 2026

Edition of 2026-08-10 · 13 systems and instruments tracked, 8 of them not held

Developments recorded from artefacts published between 2026-07-01 and 2026-08-10 – July 2026 carried forward to the date of issue, so the report holds the nightly catch to the day it was cut. Sections follow the status report.

Summary of the month

The month's substantive change was in public administration rather than infrastructure. The digital consular platform [launched on 9 July](#) and [entered its first overseas jurisdiction on 29 July](#); the water utility's services were [put on the government portal](#) on 4 August; and a workshop on the tax regime for public bodies [disclosed how little the state uses its own electronic tax rails](#).

On governance, the Council of Ministers [replaced the decree governing the Universal Service Access Fund](#) on grounds that amount to an admission the fund has run for six years without settled answers to its basic questions, and neither text is published.

Infrastructure

The regulator's provisional selection for satellite telecommunications licences was [reported on 7 July](#). Thirteen firms took the dossier and nine bids were submitted across two lots. For mobile personal satellite communications, BRAINSAT at US\$800,000 and VDM at US\$50,000 were retained, VDM required to align its offer with BRAINSAT's; for the sale of satellite capacity, BRAINSAT at US\$3 million and Mattel at MRU 6.5 million were retained on the same condition. No launch date or licence issue is reported, and the operating conditions, licensee obligations and control mechanisms are still to be defined. The account is Agence Ecofin's reading of the regulator's communiqué, which is not held.

The Ministry of Digital Transformation and Administrative Modernisation said on 24 July that [all electronic-communications operators have activated IPv6](#) across their networks and services, and that the national committee monitoring the transition recorded tangible progress, with one unnamed operator past 15% of subscribers migrated against a 25% end-2026 target. The ministry's stated rationale is sovereignty and security rather than address exhaustion – IPv6 as the precondition for 5G, cloud, internet-of-things and AI services.

PAFIID reported on 8 July that the Central Bank's AI-supported reputation-protection platform had detected [more than 10,000 electronic threats in the first half of 2026](#) – phishing, impersonation, application and site fraud – of which 470 were confirmed and removed, with 20 digital identities protected.

Digital public infrastructure

The Ministry of Foreign Affairs and the digital ministry [launched a consular-services platform on 9 July 2026](#) with a first phase of nine online services and a unified digital consular registry, built by diaspora engineers after consultations in 22 countries. On 29 July it [went into service for the Riyadh mission's zone of competence](#) — Saudi Arabia, Bahrain and the Maldives — delivering consular registration, the consular card, travel authorisation, legalisation, attestation of power of attorney, appointment booking and burial and repatriation permits, most without attending the mission. A second platform registers residence and permitted activities country by country and builds a digital register of national skills abroad. The consular registration desk remains the competent authority.

On 4 August the digital ministry [launched the digitisation of SNDE's services and their integration into the Mes Services portal](#), with the water utility's transactions available remotely from that day. German cooperation was thanked by name with no amount, instrument or term stated, and no usage figure exists.

The clearest disclosure of the month came at a [workshop on the tax regime for public bodies on 30 July](#). The Finance Minister announced an electronic invoicing system for public institutions, handling VAT and withholding at source by transferring data automatically to the tax directorate, and put more than 500 taxpayers on the tax directorate's electronic platform producing 36.45% of directorate revenue in 2026. The Director-General of Taxes gave the counter-figures: of 642 legally constituted public bodies only 339 are active with the tax administration, around 20 are absent from the national taxpayer register, and on the electronic tax-services platform 66 public bodies are enrolled, 53 file electronically and 3 pay through it. The compliance guide announced alongside is in preparation, not published.

The digital ministry [opened a two-day workshop on 27 July](#) on blockchain in public administration, stating that the sector is building a national system to guarantee data quality, security, accessibility and inter-administration integration. UNDP's representative argued that data is strategic infrastructure on a par with roads and energy and that governance transformation, not technology, is the precondition. [Reporting two days later](#) placed this against a national blockchain policy in consultation since November 2025, with land administration, trade, public procurement and natural-resource management named as target areas; no draft text, adoption date or budget has been published.

The Ministry of Youth Empowerment presented the reference document for a [first National Youth Empowerment Index](#) on 29 July: five domains built from 43 secondary indicators, a preliminary 2026 score of 60.5 out of 100, education and training strongest at 69.5% and health and sport weakest at 46.1%, with disaggregation by wilaya, sex and age band held out as a later capability.

Governance and regulation

The Council of Ministers of 29 July [approved a draft decree repealing and replacing Decree 2020-152 of 19 November 2020](#) on the management and institutional organisation of the Universal Service Access Fund. The communiqué's stated grounds are that the 2020 arrangement no longer matched institutional reality and that its

application had exposed shortcomings in defining the fund's object, in how its resources are mobilised, distributed and allocated, and in the absence of a clear framework for integrating it into the state's budgetary and accounting system. The replacement decree's terms are not reproduced and neither text is held.

Artificial intelligence and the technology sector

The Mauritanian–Omani digitalisation forum closed at the Diplomatic Academy in Nouakchott on 30 July with [a cooperation and partnership agreement and several memoranda](#) between public- and private-sector bodies of the two countries, presented as a move from exchanging experience to joint projects. The stated scope covers digital capacity-building and e-training, digital learning platforms, digital transformation, cybersecurity, artificial intelligence and data analytics, platform development, technical project management, and programmes for civil servants, students and jobseekers. It followed a working visit from 28 to 30 July by an Omani delegation led by the under-secretary of Oman's transport and communications ministry, briefed on Mauritania's digital strategy, institutional and legislative reforms and data-sovereignty work; the [Omani account](#) says its delegation carried telecoms, data-centre, AI, fintech and govtech firms. No values were disclosed by either side.

Inclusion, capacity and finance

The Ministry of Vocational Training [launched a digital-employability project on 23 July](#) financed by France's Fonds Équipe France and implemented by Simplon: 2,150 beneficiaries across six cities, about 2,000 of them young people, with a stated focus on women and people with disabilities. It succeeds a programme closed in 2025.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
