

## TWELVE-MONTH PROGRESS REPORT

# Nigeria: progress report, 2025-08-01 to 2026-08-04

Edition of 2026-08-10 · 211 systems and instruments tracked, 7 of them not held

*Compiled 2026-08-10 from the Data Landscapers source base. Sections follow the status report. Each opens with a movement ledger comparing the position at the start and end of the period, which runs to the date of issue rather than to the last month's close.*

Of 211 systems and instruments on this place's ledger, 123 changed position between 2025-08-01 and 2026-08-04, 53 did not, 20 carry no stated baseline, and 7 are **Not held** at both ends. A further 8 took a position dated after 2026-08-04 and are carried in the status report rather than compared here.

Shape check, run before the comparison: 502 sources for this place in the window — 89 in the earlier half (2025-08 to 2026-01), 413 in the later (2026-02 to 2026-08). The earlier half of the window is thin: this is a shorter comparison wearing a longer label, and the movement below rests mostly on the later half.

**Movement values.** *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a measured position worsened. *Closed* — the programme ended. *No change* — the position at both ends is the same. *Baseline not held* — the base carries no position at the start of the period, so no movement can be stated. A value may carry a qualifying clause after a comma, as in *Advanced, slipped*.

## Summary of the period

Nearly four times as many sources sit in the later half of this window as in the earlier, so arrival counts measure coverage as much as construction.

No system climbed a maturity band, and every system that changed band went backwards. Satellite broadband regressed, its largest provider pausing new orders over congestion and then brought inside a biometric verification regime; the retail central bank digital currency is under review and being redesigned toward a wholesale model; and enforcement of the new internet-platform rules was paused pending a unified framework. One programme stalled — 260 state schools whose January 2026 completion date passed with many incomplete.

Everything else arrived or held. Nigeria's digital state was substantially built before the window opened.

The same year produced a data-localisation directive, a virtual-assets executive order, a crypto tax circular, an identity statute, an open-banking launch and a three-year payments vision.

| Domestic bond financing of a fibre build | Did not exist | ₦4.05bn of a ₦20bn programme; trivial against the donor and DFI lines | ADVANCED |

Satellite broadband regressed. The largest provider had become Nigeria's second-largest ISP on Q4 2024 figures; by September 2025 it had paused new orders over congestion, and by December [more than 66,000 of its users](#) were required to submit an identity number and headshot under a regime built for SIM cards.

What arrived: a rebased optical backbone, a landing permit for a second satellite constellation, a hyperscale campus at Lekki, four sovereign-cloud initiatives, a cyber resilience framework with four-hour incident reporting, and the removal of the 5% telecom excise duty.

The national fibre programme was in development on 2025-08-01 and is in development now. The data-centre estate held its position while the localisation deadline that will test it was set. And the grid behind both has no dated position at either end that the base can state, and the localisation deadline falls on 2027-01-01.

## Digital public infrastructure

| World Bank ID4D financing           | Running (2024-12)        | US\$430m; target raised from 148m to 180m                                            | NO CHANGE         |
| App-based retail securities trading | <b>BASELINE NOT HELD</b> | ₦2.86tn of retail equity trading January-May 2026, up 138.76%, at 36.22% of activity | Baseline not held |

Almost nothing in this section changed band.

The identity register held the same position throughout: implemented at the window's start and implemented now, with enrolment [rising from 123.9m to 136m](#) against a 180m target. What did enter the record is the statutory layer around it – the NIMC Act 2026, the root certification authority transfer, ICAO directory integration and the ward-level enrolment drive.

The national data exchange was announced in August 2025 and only began moving personal data in production in July 2026, behind the Government Service Portal; the lawful basis for that operation is not on record at either end.

The payments instruments issued in the window were [open banking](#), a national payment stack, automated anti-money-laundering standards, market-concentration caps and the [localisation directive](#) among them. The rails they govern held their positions throughout.

The one regression is the retail central bank digital currency, Africa's first, now under review and being redesigned toward a wholesale model with the Bank stating it is not abandoned.

## Governance and regulation

### Legislation and regulation

One position worsened and the rest of the section arrived.

Internet-platform regulation regressed: enforcement of new rules was paused in July pending a unified national digital-economy policy framework. The same month's competition directive put the same class of company under investigation for abuse of dominance.

Data-protection enforcement held its band and changed character within it: already active at the window's start, having lifted compliance from about 4% to 55%+ by March 2025, what the year added was judicial confirmation. The Federal High Court upheld the Commission's registration power in July, and days later a private claimant won the first damages award under the Act without needing the Commission at all. Neither judgment is held, and one has no established delivery date.

What arrived: an executive order that creates a coordination council rather than a regulator, and a tax framework that collects duty in the token. The two rows that held position throughout are the statute itself and the 2021 draft data and cloud policy — five years a draft, while the localisation question it was written to answer was settled instead by a central bank circular.

|------------------------------------|---------------|---------------------------------------------------------------------------------------|----------|
| Credit scoring from payment traces | Did not exist | Scores people without bank accounts from payment traces and sells the output to banks | ADVANCED |

No system in this section changed band, and the governing instrument is still inside a bill.

What arrived: the sovereign multilingual model in September 2025; the risk-based regime's public timeline in January 2026; a proposed governance framework for public-sector AI in June, which asks first for an inventory of what is already running; the central bank's Responsible AI in Finance Hub, proposed over an [installed base of 87.5% of surveyed fintechs](#) already using AI for fraud detection.

What held position: the national strategy and trust, the hyperscaler skilling commitments, and the state deployments. All were in place before the window opened and none moved.

The surveillance estate carries no baseline the base can state: the largest AI deployment in the country by expenditure — [above US\\$470m](#) on facial recognition and number-plate tracking, with about 10,000 cameras — cannot be dated at either end of a twelve-month window, and the research finding attached to it is that there is little evidence it reduces crime.

## Inclusion and capacity

### Digital divides

| SYSTEM OR INSTRUMENT             | AT 2025-08-01            | AT 2026-08-04                                                                         | MOVEMENT                 |
|----------------------------------|--------------------------|---------------------------------------------------------------------------------------|--------------------------|
| Device affordability             | <b>BASELINE NOT HELD</b> | A global memory-chip shortage turning device cost into a divide variable (2026-07)    | <i>Baseline not held</i> |
| Gender gap in identity enrolment | <b>BASELINE NOT HELD</b> | 38.8% of enrolled NIN holders are women against 61.1% men, a 22.3-point gap (2025-06) | <i>Baseline not held</i> |

### Access to services

| Lagos teacher AI literacy programme                           | Did not exist                 | Entering the classroom through teachers rather than the curriculum                                                                                                                                                                                      | <b>ADVANCED</b>                |
| Mastercard Foundation EdTech Fellowship                       | Running since its 2019 launch | Twelve startups in cohort 4; 72 companies supported since 2019                                                                                                                                                                                          | <b>ADVANCED, FOURTH COHORT</b> |
| Data-protection officer certification pipeline                | Running (2025-05)             | Aimed at an informal sector that is 65% of employment                                                                                                                                                                                                   | <b>NO CHANGE</b>               |

The section's one movement is a delivery failure. A state programme to build 260 schools, one in every ward, powered by solar and connected before instruction was layered on, promised full opening of all 260 in January 2026. [By May 2026 many were incomplete and unequipped](#) with pupils already resuming. The stated sequencing was power first, then connectivity, then teaching; the schedule was not met.

Everything else here either arrived or held. Arrivals were a zero-rated education consultation, a startup debt facility, an AI-literacy programme entering schools through teachers and a ministerial declaration on meaningful connectivity; the skills and inclusion programmes all held.

The measurements are baselines rather than movements: [rural access at 23% against 57% urban](#), women at 38.8% of enrolled identity holders, and correction of register errors routed through a smartphone portal in a country where about 72% of adults have no smartphone. None is re-measured inside the window.

## Where the record is thin

| SYSTEM OR INSTRUMENT                                                 | WHAT WOULD SETTLE IT                                                                                                                                                                                                | LAST PROBED |
|----------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| Hyperscaler cloud region in Nigeria                                  | An AWS, Azure or Google Cloud announcement of a Nigerian cloud region or local availability zone, or a ministerial statement of terms offered to secure one.                                                        | 2026-08-04  |
| Power sequencing plan for the data-localisation deadline             | A CBN, NITDA or Ministry of Power statement sequencing grid and data-centre capacity milestones against the 2027-01-01 localisation deadline.                                                                       | 2026-08-04  |
| Public breach disclosure regime                                      | An NDPC or NCC rule requiring breach notifications to be published, or an annual register of notified breaches naming the controllers involved.                                                                     | 2026-08-04  |
| Published interoperability framework under the NIMC Act 2026         | A gazetted regulation or published framework stating the lawful basis, consent mechanism, retention rule and audit arrangements for inter-agency sharing of identity data – or the gazetted text of the Act itself. | 2026-08-04  |
| Whether foreign cloud local zones satisfy the localisation directive | A CBN clarification, FAQ or supervisory letter stating whether a hyperscaler's in-country availability zone meets the storage-and-management requirement of circular PSS/DIR/PUB/CIR/001/004.                       | 2026-08-04  |
| Consolidated federal budget allocation to digital transformation     | A Budget Office appropriation extract or Ministry of Communications, Innovation and Digital Economy annual report carrying total digital and ICT spend across votes.                                                | 2026-08-04  |
| India-Nigeria digital cooperation                                    | A bilateral MoU, India Stack or DPI cooperation programme document, or a ministerial readout naming a Nigeria-India digital instrument.                                                                             | 2026-08-04  |

Seven subjects carry no reliable position at either end, all probed once on 2026-08-04. Three became acquisition lines: the gazetted identity statute, the 2026 appropriation vote for the digital-economy ministry, and a cooperation memorandum with India's electronics ministry.

Four absences stand dated, and three of them converge on 2027-01-01. No hyperscaler cloud region or local availability zone has been announced; no government instrument sequences grid capacity against the localisation deadline; and whether a foreign cloud's in-country zone satisfies the directive is the question the circular does not answer. The fourth is the absence of any published register of notified data breaches.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
