

MONTHLY UPDATE

Senegal: monthly update, July 2026

Edition of 2026-08-06 · 41 systems and instruments tracked, 12 of them not held

Developments recorded from artefacts published between 2026-07-01 and 2026-08-06 — July 2026 carried forward to the date of issue, so the report holds the nightly catch to the day it was cut. Sections follow the status report.

Summary of the month

The tax authority [withdrew the paper fiscal stamp on 20 July 2026](#), making the digital service the sole recognised channel. Eight days later a free electronic stamp service [suspended its free tier, citing an administrative decision outside its control](#); users state they now pay additional fees for an identical service.

Civil registration published its clearest figures yet: [437 of 629 centres fully deployed](#) and [15.3m records loaded](#). The audit court then [opened a mission across 74 communes covering 2018 to 2025](#).

Three policy instruments surfaced, none of them readable: an [AI strategy adopted in 2023](#), a [national data strategy cited as adopted](#), and a [national AI development plan instructed for deployment on 29 July](#).

Infrastructure

A [teleport gateway entered service, reported 10 July](#), with sixteen new antennas and a Tier III room linking a low-orbit constellation to terrestrial networks.

Two financing items arrived within a week. On 13 July a development bank [extended a senior facility of up to EUR 270m, EUR 170m committed, for 4G, 5G and fibre in Senegal and Kenya](#) — its first Senegal project, with Senegal's share not disaggregated. On 16 July a presidential meeting produced an [announced intent of US\\$150m from a tower operator](#), with no signed agreement or schedule; the account traces solely to the Presidency, and trade press moved from *plans* to *commitment* in a day with no new evidence.

A measurement covering January to July put [mobile latency at 35.4 ms, second in sub-Saharan Africa behind Togo at 28.8 ms](#); no prior Senegal figure is held.

On 30 July the procurement authority and the ministry [floated three routes for buying critical-infrastructure cybersecurity](#) — a three-year standing supplier arrangement, functional specifications, and pooled purchasing — with no timetable or contract value. The state's own diagnosis locates the blockage in procurement, not in budget.

Digital public infrastructure

Consolidated agency data at 17 July records [437 of 629 civil-status centres fully deployed](#), [112 of them running the citizen-facing service](#); on 13 July the agency reported [15.3m records loaded](#). On 28 July an audit mission [launched across 74 communes](#), [59 already audited and fifteen selected on risk analysis](#); no findings are stated. On 30 July the mines ministry and the deposits fund [signed a convention commissioning professional cards and a nationwide database of artisanal gold miners](#), with no enrolment target, host or data-protection provision reported.

A government enterprise-architecture account of 3 August records [platforms still siloed sixteen months after the interoperability platform launched](#), with the architecture to be fed by a full inventory of national digital systems. Four narrower exchanges moved in the same weeks: a [workshop on 23 July to diagnose social-protection systems](#), the minister stating each structure runs its own system and cannot share data; a [climate-transparency data project launched on 22 July over 42 months](#); a [three-month customs roadmap with Gambia](#); and a [convention to interconnect the digital agency and the health-cover platform](#), whose personal-data commitment was not referred to the regulator.

Digital settlement on the Dakar rapid-transit network reached [39% after a super-app was integrated on 15 July](#), against 10% previously, on a network carrying up to 300,000 passengers daily. In health, a [mortality and cause-of-death analysis tool was trained out on 20 and 21 July](#), and civil society [called on 23 July for adoption of a digital-health bill](#) whose status and text are not stated; the ministry has begun building a single patient record ahead of the law meant to govern it.

Governance and regulation

The data-protection reform reached a [finalisation workshop for the bill and its implementing decree, rewritten against the data and AI strategies](#), with no adoption date or published text. The same account is the first to record a [national data strategy as adopted](#); its text is not on file and its adoption date is not established.

Two further AI instruments entered the record. A readiness assessment of 26 July records an [AI strategy adopted in 2023 on six orientations](#), correcting the base's earlier reading that no published strategy existed; the council of ministers communiqué of [29 July records an instruction to deploy a national AI development plan](#). Whether the plan supersedes or replaces the 2023 strategy is unestablished. A [blueprint for value creation through data](#) reached working-group stage on 1 and 2 July.

Two protective workstreams were dated for the first time. The telecommunications ministry [put a national online child-protection action plan in place on nine axes](#); an automated fetch on 31 July found no document on the ministry's own site. A [critical-infrastructure protection legal framework is in preparation, undated](#), and a ministry legal adviser stated that the state has [worked on social-media regulation since 2024](#) with no bill or timetable named.

Regionally, Senegal became [one of 29 founding states of an intergovernmental AI-governance body on 16 July](#), adopted [non-binding Francophone West African AI governance guidelines on 6 July](#), and joined the approval on 31 July of [three ECOWAS statistical methodological guides](#).

Artificial intelligence and the technology sector

A national prize ceremony on 30 July presented a [Wolof and French AI tutor reachable by ordinary phone call with no internet, its curriculum validated by school inspectors and hosted on servers in Senegal](#). No user, pricing or evaluation figure is given, and the education ministry's role is asserted by the vendor rather than confirmed by it. The same readiness assessment records an [ethics committee as planned](#), with no statute, membership or chair.

On 14 July the transit and telecommunications operators [signed a partnership for progressive integration of ticketing and top-ups](#), with no go-live date published, and a [corporate mobility platform launched on 16 July](#).

The digital minister pitched the technology strategy in Washington, holding [working sessions on financing mechanisms for digital infrastructure, data centres, digital identity and payment systems](#). No financier, amount or instrument was reported.

Inclusion, capacity and finance

An [advanced-level digital course for blind and partially sighted people opened on 6 July](#), on a programme reporting 700 people and twenty trainers trained since its launch. The launch date is not stated, so the cumulative figure has no start point.

A digital financial-education project [closed on 15 July](#) having trained 265 civil-society trainers across twelve organisations. Its comparison platform is left unmaintained, because no implementer can compel tariff data from financial institutions.

The council of ministers of 29 July [proposed a national research and innovation fund alongside applied research laboratories](#). Neither is an adopted instrument, and no budget or date attaches to either.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
