Will 90,000km fibre move Nigeria from buffering to better browsing? — The Sun Nigeria, 26 August 2026

NIGERIA

Stakeholders question whether Project BRIDGE, the 90,000 km fibre deployment starting in October, has addressed what has frustrated Nigerian fibre for years: right-of-way charges, multiple taxation, approval delays, vandalism and fibre cuts running at an average of about 1,100 a week on the NCC's earlier count. The programme takes the national backbone from about 35,000 km to 125,000 km across all 36 states and more than 770 local government areas, financed by \$500 million from the World Bank, \$100 million from the EBRD and a €22 million EU grant. ALTON and ATCON both name state right-of-way pricing and damage to existing infrastructure, rather than the laying itself, as the risk to the investment. *Also under [Connectivity](#) and [Digital divides](#).*

UK supports South Sudan fintech — ITWeb Africa, 26 August 2026

SOUTH SUDAN

Bank of South Sudan governor Addis Ababa Othow met British ambassador David Ashley in Juba to discuss monetary policy, digital banking regulation and public sector financial management, with no agreement, figure or timeline announced beyond the meeting itself. The central bank and the finance ministry are engaging telecommunications companies and mobile money operators to integrate the National Payment System, which is intended to connect commercial banks directly with mobile network operators and move a cash-dominated economy onto interoperable electronic infrastructure. *Also under [Digital Payments and Fintech](#) and [Access to services](#).*

Soberania digital e aposta na formação de jovens reforçadas com a entrada em funcionamento de novo centro tecnológico — OPaís, 26 August 2026

ANGOLA

Angola's telecommunications ministry put a requalified government technology centre into service, presenting it as the place where state and citizen data will be stored and protected inside national territory. Minister Mário Oliveira said after visiting the facility on 25 August that protecting citizens' data and reinforcing digital sovereignty remain executive priorities, and placed the centre within the country's digital-transformation policies. *Also under [Data Storage](#) and [Training and skills](#).*

Digital migration progress: What the numbers say — ITWeb South Africa, 26 August 2026

SOUTH AFRICA

South Africa's broadcasting digital migration programme told Parliament's communications committee on 25 August that 52,869 households registered for subsidised set-top boxes still cannot be located, down from about 80,000 at the previous meeting, and that no analogue switch-off date has been set pending a steering committee of broadcasters and stakeholders. A SITA-facilitated cleaning of registration data dating to September 2015 cut the

installation target from 447,815 to 401,803 households, against which 290,506 installations are complete and verified. The department said the state has spent close to R2 billion on dual illumination, and MPs described the programme as failed and wasteful. *Also under [Connectivity](#) and [Digital divides](#).*

NITDA Inaugurates Taskforce to Drive Nigeria's National Sovereign Cloud Initiative — Tech Africa News, 25 August 2026

NIGERIA

NITDA's own account of the same inauguration sets out the sequence and the mandate: the taskforce follows the launch of the initiative's regulatory, technical, assurance and investment instruments, and is the principal multi-stakeholder mechanism for putting them into effect, with responsibilities spanning regulatory concurrence, institutional coordination, implementation monitoring, indigenous capacity and investment mobilisation. The agency states that it complements rather than replaces the statutory responsibilities of the regulators and agencies taking part. *Also under [Data Storage](#) and [Standards](#).*

Nigeria launches national cloud taskforce — ITWeb Africa, 25 August 2026

NIGERIA

Nigeria has inaugurated the National Sovereign Cloud Initiative Implementation Taskforce, moving its sovereign-cloud programme from framework to implementation. The taskforce is to align regulators, government institutions and private operators behind technical standards, cloud governance, infrastructure assurance and investment, monitor progress and clear the bottlenecks that slow adoption. Two figures frame it: Nigerian organisations are estimated to spend about US\$850 million a year on foreign cloud infrastructure, and the National Digital Cloud Policy targets US\$750 million of private cloud and data-centre investment within 24 months. *Also under [Data Storage](#) and [Standards](#).*

Niger Advances Construction of Local Electronics Plant for Smartphones, Computers and Tablets — Tech Africa News, 25 August 2026

NIGER

Niger's communications and vocational-training ministers inspected the DHY Technologie electronics assembly plant under construction at Hamdallaye in Tillabery region on 20 August, with the authorities reporting the smartphone, computer and tablet facility more than 60% built after six months. The government frames locally assembled devices for citizens and public institutions as a way to build domestic technical capacity and cut dependence on imported equipment. *Also under [ICT Industry](#).*

NAC Okays Framework To Build Nigeria's Digitised Modern Addressing System — ThisDay, 25 August 2026

NIGERIA

Nigeria's National Addressing Council, chaired by the Vice-President, ratified the preliminary framework for a national digitised addressing system and named the science and technology ministry as its secretariat for technical implementation, systems integration, interoperability and standards. NIMC takes individual verification, the Corporate Affairs Commission business address verification, NIPOST postcode administration, and states and local governments implementation. The framework replaces the 2017 addressing policy, described at the meeting as obsolete, focused on mail delivery and silent on business address verification. *Also under [Registries](#) and [Standards](#).*

Mercado & Finanças: 5G em Todas as Capitais Provinciais Até Junho de 2027 — Diário Económico (Moçambique), 25 August 2026

MOZAMBIQUE

Mozambique's INCM issued spectrum licences to Tmcel, Vodacom and Movitel carrying a June 2027 deadline for 5G service in every provincial capital, with the same package covering urban centres, industrial zones, economic poles and tourism destinations, and 4G obligations reaching border and rural areas in a later phase. Also provided for are

700,000 subsidised smartphones under a government-led, World Bank-supported programme starting at \$5 million and able to grow to \$25 million. Tmcel and Movitel representatives put on record that many target localities have no grid electricity, roads or backhaul. *Also under [Connectivity](#) and [Digital divides](#).*

Licences, taxes, services... : le Liberia definit les regles du marche des telecoms par satellite — wearetech.africa, 25 August 2026

LIBERIA

The Liberia Telecommunications Authority has drawn up guidelines covering orbital and ground satellite services, with particular attention to direct-to-device, cybersecurity, data protection and national security. They span geostationary and non-geostationary constellations and cover gateway, VSAT, satellite broadband, backhaul, broadcasting, managed data and direct-to-device services, each requiring authorisation from the authority. The text still has to be signed and published in the National Gazette before it takes effect. *Also under [Connectivity](#) and [Cybersecurity](#).*

INTIC engages Mozambican AI Association to promote national artificial intelligence strategy — TechReviewAfrica, 25 August 2026

MOZAMBIQUE

Mozambique's INTIC presented its draft National Artificial Intelligence Strategy to the Mozambican Association of Artificial Intelligence at a meeting chaired by board chairman Lourino Chemane, describing it as still under development through an open multi-sector consultation covering public service delivery, public-administration modernisation, innovation and productivity. No adoption date, budget or governance instrument for the strategy is stated. *Also under [AI](#).*

China offers Botswana AI support — ITWeb Africa, 25 August 2026

BOTSWANA

China's ambassador to Botswana has publicly offered artificial-intelligence cooperation in smart mining, digital government and talent training, pitching Chinese technology as a lever for the economic diversification Botswana is pursuing away from minerals. The offer is placed against Xi Jinping's July pledge at the Shanghai World AI Conference of 5,000 training places for developing countries and AI application cooperation centres for bodies including the African Union. It is a media note from an embassy, not an agreement. *Also under [China activities](#) and [AI](#).*

Beyond digital adoption: The critical role of strategy implementation in Uganda's education operational efficiency — African Journal of Science, Technology, Innovation and Development, 25 August 2026

UGANDA

A study of Uganda's education sector finds that digital adoption has no statistically significant direct effect on operational efficiency, and works only through strategy implementation, which fully mediates the relationship. Data came from structured questionnaires put to 55 administrators and teachers between May and June 2025, analysed by partial least squares structural equation modelling. The authors recommend that institutions and policymakers prioritise strategic execution, leadership support, digital infrastructure and continuous capacity building. *Also under [Training and skills](#) and [Sectoral management information systems](#).*

Legislation and regulation

Tshwane shuts online food stores over non-compliance — ITWeb South Africa, 26 August 2026

SOUTH AFRICA

The City of Tshwane shut the Hatfield fulfilment premises of Zulzi, Yassir and Uber Eats Market on Friday 21 August in a health-department enforcement operation — Yassir and Uber Eats Market for allegedly trading without a Certificate of Acceptability or business licences, Zulzi over what the city describes as fraudulent compliance documents including a fraudulent liquor licence. The city says it will also investigate the sale and dispatch of medicines through the Zulzi platform, and that a digital storefront does not displace the municipal health, licensing

and food-safety obligations attached to the physical premises behind it. Uber Eats says the merchant is unavailable on its app while the matter is addressed; Yassir says the store stays closed until the requirements are satisfied. Also under [Digitalisation of sub-national government](#) and [ICT Industry](#).

Nigeria's NCC grants MTN conditional approval for IHS deal — TechCabal, 26 August 2026

NIGERIA

Nigeria's NCC granted MTN Nigeria a conditional Approval-in-Principle in mid-July for the acquisition of IHS Towers' Nigerian business, disclosed by the regulator on 25 August and separate from the competition clearance the FCCPC had already given. The conditions are compliance with the NCC's corporate governance guidelines, a bar on amending existing contracts as a consequence of the transaction, a prohibition on the deal conferring exclusivity on MTN Nigeria, and an investment plan with measurable milestones; final approval is withheld until the regulator confirms compliance. Nigeria carries 15,848 of IHS's roughly 28,000 African tower sites, more than half the portfolio, in a transaction valuing IHS at about \$6.2 billion enterprise value and the stake purchase at about \$2.2 billion. Also under [ICT Industry](#) and [Connectivity](#).

Health data is Kenya's new land: We must own it before it's gone — The Standard, 26 August 2026

KENYA

A health policy analyst argues in The Standard that Kenyan health data is being collected to train AI medical devices sold globally while the communities it comes from receive nothing, citing a European inventor who sought a proof-of-concept study in a Nairobi settlement because European regulatory requirements were too demanding. He credits three convergent policy developments — the Pharmacy and Poisons Board's 2025 guidelines on AI-powered medical tools, the National Artificial Intelligence Strategy 2025–2030 naming data sovereignty a priority, and the Artificial Intelligence Bill 2026 tabled in the Senate — but says each stops short of settling who owns the training data or who profits when the tools go global. Also under [Data protection](#) and [AI](#).

Who will control elections tech and servers? Bill languishes as 2027 nears — Daily Nation, 25 August 2026

KENYA

The Elections (Amendment) Bill 2024, whose clause 23 would vest ownership of the intellectual property in Kenya's election technology and access to its election servers in the IEBC, remains stalled in the National Assembly. It passed the Senate in December 2024 and was read a first time in February 2025, since when the Justice and Legal Affairs Committee has tabled no report. The provision is set against the 2017 refusal to open IEBC servers hosted in France and a vendor's 2022 refusal of server access on intellectual-property grounds. Also under [Data protection](#), [Cybersecurity](#) and [Data Storage](#).

Data protection

Your NIN is your identity, stop giving it away — The Observer (Uganda), 26 August 2026

UGANDA

Uganda's Personal Data Protection Office says about 14,000 organisations are registered to handle personal information while more than 500,000 entities — businesses, schools, hospitals and informal vendors — collect or process it outside the legal framework. The Observer argues that the gap turns routine demands for a National Identification Number into an open licence to harvest identity, and that individual vigilance cannot substitute for registration backed by audits and consequences. PDPO national director Baker Birikujja says collecting personal data without registration is a criminal offence. Also under [Digital Identity and CRVS](#) and [Public debate and participation in policymaking](#).

The Please Call Me millions: The data that didn't exist — ITWeb South Africa, 25 August 2026

SOUTH AFRICA

A reconstruction of the twenty-year Please Call Me claim against Vodacom turns on the operator's position that the data needed to value the idea did not exist: it told the Constitutional Court it retains only six months of operational data and holds no record linking a Please Call Me message to any call it induced, so both sides' figures were modelled rather than measured. Court documents record that Vodacom decided in 2013 not to track the revenue, having been advised to, and the settlement reached at the end of 2025 is confidential, so the amount is not on the record. The case is a data-retention and record-keeping story as much as a compensation one. *Also under* [ICT Industry](#).

Ghana and UK Deepen Cybersecurity Cooperation to Tackle Cybercrime and Protect Children — Tech Africa News, 25 August 2026 GHANA

Ghana's Cyber Security Authority reports talks with the British High Commission on deepening cyber cooperation, covering cyber-enabled crime and financial fraud, child online protection, capacity building and international cyber governance, with the Pall Mall Process and wider African participation in it a particular focus. No agreement, instrument, funding or timeline is announced; it is an engagement reported as discussion. *Also under* [Cybersecurity](#) and [Regional collaboration](#).

Regional collaboration

Malawi to enhance digital government with Ghana's support — Biometric Update, 25 August 2026 MALAWI

GHANA

A Malawian delegation travelled to Accra to structure a digital-government cooperation with Ghana's communications ministry, under which Ghana is to make more than a dozen technology companies available to help Malawi build digital systems and infrastructure. The Ghana Card is cited as the reference implementation at more than 19 million holders; Malawi brings a high-coverage national ID system, a data centre and a government data exchange platform. The visit is dated only as recent, and no memorandum, budget or timetable is named. *Also under* [Other GovTech and e-Gov](#) and [Digital Identity and CRVS](#).

ITU launches Sub-Saharan broadband push — ITWeb Africa, 25 August 2026 MALAWI

The ITU has opened a five-day intermediate GIS and data-management course in Lilongwe for broadband-mapping practitioners from Malawi, Zimbabwe, Botswana and Zambia, hosted by the Malawi regulator MACRA, funded by the European Union and delivered by Esri South Africa College. It sits under the Africa-BB-Maps project, which runs to 2028 and is meant to establish or strengthen harmonised national broadband mapping in eleven sub-Saharan regulators, from Benin and Botswana to Uganda, Zambia and Zimbabwe. *Also under* [Connectivity](#), [Digital divides](#) and [National statistics](#).

Development of Data Centre Infrastructures Underpinning the Digital Economy (PIDA project prospectus) — African Union / AUDA-NEPAD (PIDA), 25 August 2026 CAR

A continental infrastructure prospectus would put six new data centres in Burundi, the Central African Republic, Sao Tome and Principe, Chad, Equatorial Guinea and Gabon, and reinforce five existing centres in Angola, the Republic of Congo, Cameroon, Rwanda and the Democratic Republic of the Congo. It is costed at US\$9m across the eleven countries, is a quarter of the way through, and is still at project-definition stage. *Also under [Data Storage and Cybersecurity](#).*

New system rewrites producer price data — The Namibian, 25 August 2026

NAMIBIA

The Namibia Statistics Agency has moved producer price index compilation off a spreadsheet system onto an automated processing engine, disclosed in the second-quarter bulletin released on 21 August and carrying retrospective revisions back to 2015. Missing prices are now imputed as a turnover-weighted average of observed price relatives within the product group rather than by unweighted class mean, imputation is capped at three consecutive periods before an item must be replaced, and automated validation flags extreme swings and entry errors across establishment files. *Also under [National statistics](#).*

Mozambique picks Tablu Tech for digital trust infrastructure — Biometric Update, 25 August 2026

MOZAMBIQUE

Mozambique's INTIC has opened discussions with local partner Tablu Tech on a platform called MoDi Sign to modernise the country's advanced digital signature system, extending digital identity, signatures and public key infrastructure into a national digital trust layer for public and private transactions. It follows a May tender by the digital transformation agency ATDI for a national mobile digital identity and electronic signature infrastructure, and a February memorandum with Brazil's ITI covering credentialing, auditing, training and technical assistance for running a root certification authority. *Also under [Digital Identity and CRVS](#).*

Mbigou : Moov Africa Gabon Telecom vend des gigas sur un réseau inexistant — Groupe Dépêches 241, 25 August 2026 GABON

At Mbigou, a departmental capital and a commune since 1996, Moov Africa Gabon Telecom sells data bundles on a network that barely functions: coverage appears and disappears while prepaid credit and bundle validity run down normally. *Dépêches 241* puts the regulator's inaction to the president of ARCEP's Conseil de régulation. No quality-of-service determination, decision or sanction is published. *Also under [Connectivity](#) and [Digital divides](#).*

L'Intelligence Artificielle aux Comores: Mariama Madi éveille les consciences à l'American Corner — La Gazette des Comores, 25 August 2026 COMOROS

A scientific and technology conference at the American Corner on 19 August put the rise of artificial intelligence to an audience of students, school-leavers, professionals and researchers, led by seismologist Mariama Madi of the Centre National de Documentation et de Recherche Scientifique. The theme set the technology's harms against its advances and asked what critical thinking, research and innovation can offer the Comoros in response. *Also under [AI](#), [Literacy](#) and [Use of satellite data](#).*

Kagame Urges African Countries to Take Active Role in Shaping AI Future — Bantu Gazette, 25 August 2026

RWANDA

President Paul Kagame urged African countries to take an active role in shaping the future of artificial intelligence, telling a news conference in Kigali that the continent has the knowledge and talent to compete globally and should not accept being left behind. He noted that many Africans with the expertise to develop AI systems already work for the institutions and companies building them, and argued that the broader constraints keeping the continent from competing on equal terms are what have to be resolved. *Also under [AI](#).*

Ventures Platform's second fund closes at \$84 million, almost double its first — TechCabal, 26 August 2026

NIGERIA

Ventures Platform closed VP Pan-African Fund II at \$84 million, 1.8 times its first institutional fund, adding the EBRD, Norfund, the Dutch family office Alphasat and the Ashesi University Foundation to the limited partners from the \$64 million first close in November 2025. The firm will back roughly the same number of companies with larger cheques — up to \$3 million, averaging about \$1.5 million — targeting entry stakes of 10% to 12%, on founding partner Kola Aina's reading that secondary sales are its most reliable route to liquidity and that a small stake leaves nothing to sell. Nigeria's iDICE programme is an anchor limited partner and wrote one of the fund's largest individual cheques. *Also under [Innovation ecosystem](#).*

YC-backed startup ThriveAgric raises \$3.93 million in commercial paper sale — TechCabal, 25 August 2026

NIGERIA

ThriveAgric raised ₦5.3 billion, about \$3.93 million, in the first series of a ₦50 billion commercial paper programme approved by Nigeria's securities regulator, oversubscribed against a ₦5 billion target. The proceeds fund working capital for aggregating smallholder produce for off-takers rather than production. The company says its operating system is accumulating the farmer transaction and farm-activity data intended to let financiers underwrite those farmers directly. *Also under [ICT Industry](#).*

South Korea Approves \$170 Million Loan for AI and Digital Training Institute in Tanzania — Tech Africa News, 25 August 2026

TANZANIA

South Korea has approved a US\$170 million concessional loan from its Economic Development Cooperation Fund to build an artificial-intelligence and digital training institute in Tanzania, covering campus and laboratory construction, programmes in AI, robotics, data analytics and the internet of things, equipment, curriculum and operations support, tied to procurement from Korean firms. Further training institutes and a large-scale data centre are said to be planned. The source gives no approval or signature date, only its own publication date, so the loan is not recorded as a dated commitment in the finance layer. *Also under [Training and skills](#) and [AI](#).*

South African AI Startup Verascient Raises \$1.2m to Scale Enterprise Platform — Tech Africa News, 25 August 2026

SOUTH AFRICA

South African enterprise AI startup Verascient raised \$1.2 million, about R19.5 million, in an oversubscribed round backed by Founder Collective, Andrena Ventures, Cambridge Enterprise and Summit Ventures. Its platform builds workflows and agents over institutional knowledge scattered across email, spreadsheets, meeting records and legacy software, on a temporal knowledge graph that tracks how information changes while preserving provenance, access permissions and historical context. It is aimed first at financial services, insurance and logistics. *Also under [AI](#).*

MTN has 5 million fintech users in Nigeria. It wants 30 million. — TechCabal, 25 August 2026

NIGERIA

MTN has set a medium-term target of 30 million fintech customers in Nigeria against five million today, group chief executive Ralph Mupita telling TechCabal that converting 30% or even 50% of the telecom base is the measure of success. The operator is bringing in technology from Alibaba, Alipay and Ant International to compete with OPay, PalmPay and Moniepoint, and will increasingly lend off its own balance sheet rather than only through the partner banks that currently score its customer data for credit. *Also under [Digital Payments and Fintech](#).*

Lisk shuts down blockchain, cutting off a backer of African startups — TechCabal, 25 August 2026

Swiss blockchain company Lisk said it will discontinue its chain on 31 October and wind down its DAO, ending a funding and accelerator pipeline that had backed African early-stage Web3 companies including Azza and ClapMi in Nigeria, LovCash in South Africa and Afrikabal in Rwanda. It cited chain revenue insufficient to support the LSK token, proposes burning 100 million tokens to cut supply from 400 million to 300 million, and has arranged a migration path onto Celo. African blockchain startups raised \$90.1 million in 2025, down 26.6% on the year. *Also under [ICT Industry](#).*

Collective X adopts 'always on' approach to skills fund — ITWeb South Africa, 25 August 2026

SOUTH AFRICA

The South African non-profit Collective X has removed the fixed application windows on its R200 million Digital Skills Impact Fund, so employers can apply year-round for co-funding of work-integrated digital skills programmes. It reports more than 1,800 young people through the fund across all nine provinces, 97% of them absorbed into employment and over 75% still employed after six months, against targets of 40,000 digitally skilled workers a year by 2030 and 500,000 young people into digital roles by 2034. The R200 million is a standing application envelope rather than a commitment to a named recipient. *Also under [Training and skills](#).*

2025 Africa Tech Venture Capital — Partech Partners, 25 August 2026

Partech's annual account of African tech venture capital reports that 2025 diverged from the global market's concentration on artificial intelligence, with growth instead in enterprise software, e-commerce, cleantech and mobility, and Series A and B activity picking up in both deal count and capital. Its headline finding is debt: debt

financing passed its 2021 peak and made up almost half of all capital raised, which the authors read as a sign that more companies now have the cash-flow visibility and governance to borrow rather than dilute. The page carries no date of its own and is captured here as a reference study. *Also under [Innovation ecosystem](#).*

Connectivity

Liquid targets Kenya connectivity boost — ITWeb Africa, 26 August 2026

KENYA

Kenya's ICT principal secretary John Tanui met Liquid Intelligent Technologies Kenya chief executive Neeraj Pradhan in Nairobi to discuss accelerating broadband and extending public Wi-Fi into public spaces and underserved communities, with no agreement, cost or timeline announced. The talks are framed against the Digital Superhighway target of 100,000 km of fibre and 25,000 public Wi-Fi hotspots across all 1,450 wards, backed by a \$390 million World Bank programme and state budget allocations. *Also under [Access to services](#).*

Cote d'Ivoire : 68 millions \$ pour connecter 575 localites rurales — wearetech.africa, 26 August 2026

CÔTE D'IVOIRE

Côte d'Ivoire is continuing its FCFA 38 billion, about \$68 million, Programme national de connectivité rurale to bring mobile and internet coverage to 575 localities, and set out its phase figures in a government communiqué of 24 August. Phase one, at FCFA 10 billion, was completed in 2024 with 160 radio sites serving 175 localities and about 221,267 inhabitants; phase two commits FCFA 18 billion for 240 further localities and phase three FCFA 10 billion for 160 more. The national broadband backbone stood at 5,207 km with 4G covering 65% of the territory in 2024. *Also under [Rural digital data capture](#) and [Digital divides](#).*

Blu Label Unlimited smacked by R4.9bn Cell C write down — ITWeb South Africa, 26 August 2026

SOUTH AFRICA

Blu Label Unlimited booked a R4.9 billion full-year loss writing its Cell C stake down to the R9 billion the operator's November listing priced it at, a 297% year-on-year swing in net income. Stripping out the write-down, the year to May produced net profit after tax of R677 million on revenue of R9.4 billion; the company declared a 10c dividend, adopted a policy of paying out 30% to 50% of core headline earnings excluding Cell C, and has started buying back its own shares. It retains 49.53% of Cell C, whose market value of R8.7 billion now exceeds Blu Label's own R7.3 billion. *Also under [ICT Industry](#).*

«الدعم السريع» تغلق أسواق النهود وتوقف «ستار لينك» — Sudan Tribune, 25 August 2026

SUDAN

The Rapid Support Forces ordered every public market in En Nahud, West Kordofan closed and Starlink services cut off indefinitely from 26 August. A local emergency room warned that severing satellite connectivity would cut displaced families off from relatives and from incoming remittances, in a locality already under deteriorating security and living conditions. The order coincided with reinforcements arriving from Darfur.

Tmcel begins ANGOSAT-2 satellite trials — ITWeb Africa, 25 August 2026

MOZAMBIQUE

ANGOLA

Mozambique's state operator Tmcel has begun proof-of-concept testing of Angola's ANGOSAT-2 satellite, a step towards a commercial agreement to carry communication and broadcasting signals across Mozambique over Angolan space infrastructure. It follows the public broadcaster's own trial transmitting television by the same satellite and implements a bilateral memorandum signed in June. Angola is running a parallel pilot with Telecom Namibia for satellite backhaul, both framed as work under the SADC regional infrastructure master plan. *Also under [Use of satellite data](#).*

Pékin : le ministre de la Communication en visite chez l'opérateur de diffusion StarTimes — Sidwaya, 25 August 2026

BURKINA FASO

Burkina Faso's communications minister and a delegation were received at Chinese broadcaster StarTimes' Beijing headquarters on 22 August, at the chief executive's invitation, to examine partnership in audiovisual and digital broadcasting. The exchanges went to the terms of collaboration with the national broadcaster RTB and the transmission company SBT. No memorandum, commitment, value or timetable is stated. *Also under [China activities](#).*

Fibre is changing Nigeria's Internet. The hard part is getting everyone connected — TechCabal, 25 August 2026

NIGERIA

Fibre has overtaken fixed wireless as Nigeria's largest fixed-broadband technology for the first time, with fibre-to-the-premises connections rising from 84,141 in late 2025 to about 265,000 by June, and the median fixed download speed up 155% since 2023 to 34.47 Mbps on Ookla's data. The gain is concentrated at the bottom of the distribution — the slowest tenth of connections improved almost threefold while the fastest tenth barely moved — so the country is raising its broadband floor rather than its ceiling. What follows is harder: affordability, the cost of rural build, and long-distance fibre concentrated among the few operators able to fund backbone, with the Wholesale Fixed Broadband Market Assessment the instrument meant to force sharing and open access. *Also under [Digital divides](#) and [Rural digital data capture](#).*

Côte d'Ivoire – Raxio Group — Raxio Group, 25 August 2026

CÔTE D'IVOIRE

Raxio's own page for CIV1, its Côte d'Ivoire facility, describes the country's first carrier-neutral Tier III data centre, built at Grand Bassam inside the VITIB technology village 30 km from Abidjan, with 2,000 square metres of white space on major fibre routes and serving the wider UEMOA region. It is an undated operator product page captured today, so it records the facility's specification rather than any event. *Also under [Data Storage](#).*

Sinazongwe Town Council Goes Digital as SMART Zambia Deploys ICT Equipment — Tech Africa News, 26 August 2026

ZAMBIA

SMART Zambia's e-Government Division has equipped Sinazongwe Town Council in Southern Province with high-speed internet, telepresence systems, desktops and laptops, and solar power to keep the offices running through load-shedding. The deployment is presented as part of the Government Wide Area Network programme to connect all 116 councils and government institutions to a secure national backbone, with training for local ICT staff running alongside the hardware. No cost, vendor or completion date for the wider rollout is stated. *Also under [Digitalisation of sub-national government](#) and [Other GovTech and e-Gov](#).*

Digital Identity and CRVS

خير مصري: الهوية الرقمية تخفض تكاليف البنوك وتعزز المنافسة — اليوم السابع (Youm7), 25 August 2026 EGYPT

An Egyptian banking commentator argues that digital identity and remote account opening would cut banks' operating costs on branches, staff and paperwork, offset by investment in the technology and the cyber-security it requires, with the net effect positive and the larger gain accruing to customers through flexibility and financial inclusion. It is named commentary on a television channel rather than an announcement: no institution, instrument or date is attached to it. *Also under [Digital Payments and Fintech](#) and [Access to services](#).*

Somalia pushes for stronger adoption of eAqoonsi digital ID app — Biometric Update, 25 August 2026 SOMALIA

Somalia's identification authority renewed its public call for citizens to adopt the eAqoonsi digital ID app, restating that the app-held credential is legally equivalent to the physical card. The app has passed 50,000 downloads, against more than one million digital IDs issued as of November 2025 and a target of 15 million by 2029. An estimated \$125 million is still needed to implement the World Bank-funded programme in full, and inclusion complaints over weak connectivity and low digital literacy were reported in April.

Police Nationale du Burkina Faso - CNIB — Police Nationale du Burkina Faso, 25 August 2026 BURKINA FASO

The national police's standing page for Burkina Faso's identity card sets out what the outgoing credential is and how it is checked: compulsory from the age of fifteen, valid for ten years, and matched at the identification office against demographic similarity and fingerprints, with facial biometrics added to that stack in 2009. The page carries no date of its own, and the card it describes is the one the regional biometric card has been replacing since December 2025. *Also under [Access to services](#).*

Digital Payments and Fintech

How a diverted tuition fee birthed a \$450 million remittance platform — TechCabal, 26 August 2026

GHANA

PayAngel, founded in 2013 after a diverted tuition payment cost a relative their university place, routes diaspora remittances to verified schools, hospitals, insurers and retailers directly rather than to a family member trusted to forward them, identifying the payer through each institution's own reference system. The company says it has processed more than \$450 million, has over 100,000 active remitters across 22 countries and an annualised revenue run rate of about \$4 million, and holds regulatory approval in the United Kingdom, United States, Canada, Australia and Ghana. A sender transferring at least £100 a month qualifies their beneficiary for rolling life and hospitalisation cover, and a separate product lets African businesses collect from diaspora customers directly. *Also under [Access to services](#) and [ICT Industry](#).*

Moniepoint is phasing out MonieWorld, its UK remittance product — TechCabal, 25 August 2026

NIGERIA

Moniepoint is phasing out MonieWorld, its UK diaspora remittance product, less than 18 months after an April 2025 launch, and redirecting resources to Nigeria and Kenya. The group incorporated Moniepoint GB in February 2024, committed £1.2 million in setup expenditure, spent \$1.26 million between February and December 2024, and placed a \$2.5 million equity deposit in July 2025 to acquire FCA-authorised Bancom Europe, against \$7.39 million earmarked for the London expansion in 2025 filings. No transition timeline was given.

Face au chômage, Djibouti mise sur le numerique pour connecter diplomes et recruteurs — wearetech.africa, 26 August 2026

DJIBOUTI

Djibouti's labour ministry presented Djibouti Emploi on 24 August, a single digital portal meant to centralise its employment services and interconnect the institutions working in the field, aimed at jobseekers, employers and the administration alike. The World Bank's Djibouti Economic Monitor of May 2026, over data collected in the first two quarters of 2025, puts 51.8% of the working-age population outside the labour force, 46.2% of 16-to-24-year-olds not in employment, education or training, and 52.7% of jobs in the informal sector. *Also under [Access to services](#) and [National statistics](#).*

ZRA, US sign MoU to advance border security technology — News Diggers, 25 August 2026

ZAMBIA

The Zambia Revenue Authority signed a memorandum with US firm Astrophysics Inc. on 24 August to equip the Livingstone border post with scanning and security technology. Its director general framed the arrangement as data-driven supply-chain assurance and as delivery of a presidential instruction to use technology in tax administration and trade facilitation. No commitment amount, equipment specification or delivery timetable is stated. *Also under [US / hyperscaler activities](#).*

CMSV prepara lançamento de plataforma digital com serviços municipais — Expresso das Ilhas, 25 August 2026

CAPE VERDE

São Vicente's municipal council presented São Vicente Digital, a municipal services platform due for public presentation in October and operation by the end of 2026, opening with 17 services. Residents will be able to submit applications, track cases in real time, make payments and receive official documents with legal validity. It is funded by the UN Joint Office in Cabo Verde; the minister for family, inclusion, social development and labour argued for keeping and improving counter services for those still facing difficulties with digital access. *Also under [Digitalisation of sub-national government](#) and [Access to services](#).*

Intron's new voice model can follow African speakers who switch languages mid-sentence — TechCabal, 26 August 2026

NIGERIA

RWANDA

Intron released Sahara v2.5, adding code-switching speech recognition in 12 African languages and what it says is the first African trilingual model, built for Rwanda's Kinyarwanda-English-French mix. On its own benchmarks and evaluation set the Lagos-founded company reports an average word error rate of 34.3% on code-switched African speech against 53.8% for Google's Gemini 3.6, and coverage of 31 languages after adding Nupe, Kanuri, Nigerian Fulfulde, Tigrinya, Kikuyu, Dholuo and Somali. It says the models are deployed at more than 40 organisations across six countries, with US patents filed on the trilingual algorithms. *Also under [ICT Industry](#) and [Access to services](#).*

Egypt's Offshoring Sector Generates \$5.2bn as AI and Digital Services Drive Growth — Tech Africa News, 26 August 2026

EGYPT

Egypt generated \$5.2 billion in offshoring services exports in 2025, across 252 companies operating 282 delivery centres, 177 of them multinational, employing more than 195,000 specialists. A prime-ministerial tour of Teleperformance, Concentrix, Vodafone Intelligent Solutions and Sutherland in Alexandria — which together employ nearly 15,000 there — was used to press the case for growing the industry outside Cairo and moving it from back-office work into generative-AI-enabled services. *Also under [ICT Industry](#) and [National statistics](#).*
