

MONTHLY UPDATE

Botswana: monthly update, August – September 2026

Edition of 2026-09-02 • 26 systems and instruments tracked

Developments summarised from sources published between the beginning of last month and today.

SUMMARY OF THE MONTH • GOVERNANCE • ICT INFRASTRUCTURE • DPI • TECHNOLOGY • INCLUSION • DATA • GEOPOLITICS

Summary of the month

Payments and cross-border links carried the month. Three payment products entered service – a cashless payment and financing partnership for taxi operators, a wallet-linked card, and e-commerce acceptance for a foreign card scheme extended across nine African markets – all three private, and none of them a public rail.

Regional agreements were the other half: an ICT memorandum with Namibia signed at Kasane on 7 August, alongside the completed cross-border fibre interconnection it sits over, an innovation memorandum with South Africa, and a regional tourism univisa agreement approved at the SADC summit on 17 August. Domestically the statistics office launched its second statistics development strategy for 2026-2030, and the health ministry signed a ten-year health-systems partnership with a foreign operator.

Governance

Regional collaboration

The ICT memorandum with Namibia was signed at Kasane on 7 August between the two ICT ministries, with their operators and regulators present, covering digital transformation, cybersecurity, connectivity and skills development. It had been announced for signature the day before as an extension of existing roaming and submarine-cable transit cooperation. The signed instrument itself is not held, and no term, funding or data-governance provision is published; what the two sides did publish alongside it is operational, and is recorded under connectivity below.

ICT Infrastructure

Connectivity

The Plumtree-Bulawayo section of a regional fibre corridor went live on 6 July, carrying traffic at 800Gbps equipped on equipment rated over 10Tbps, with a second phase to Livingstone due September 2026. The corridor is stated as a Botswana-Zimbabwe-Zambia route; the live section is inside Zimbabwe and no Botswana segment is dated.

The western corridor did produce a Botswana segment. Alongside the Kasane memorandum the two sides disclosed that MTC has completed the Gobabis-Buitepos fibre link, now interconnecting with BoFiNet at Charles Hill – described as the first direct cross-border fibre link between the two operators – and costed the Trans-Kalahari

Corridor's remaining 4G gaps at about N\$52 million across 13 new sites. The two national incident-response teams are also said to be deepening cooperation. No capacity, commissioning date or traffic figure is published for the fibre link.

Domestic access moved on a much smaller scale. The backbone company [completed its 2025/26 local access projects at P43m, taking fibre to Moshupa, Ramotswa/Taung and Thamaga and connecting 191 customers — 68, 66 and 57 across the three — with 210 construction jobs](#). The customer count is the operator's own and is a count of connections, not of premises passed.

Data Storage

The Kala data centre [completed its first full quarter of continuous operation to 30 June, with revenue the company itself describes as modest and at proof-of-concept scale](#). It is designed for up to 1 MW and expansion is subject to funding. The base holds nothing on the facility before September 2025.

Energy

The facility's power is the unusual part. [On-site gas-fired generation is supplemented by solar introduced to cover periods of lower gas availability, with battery and compressed-gas storage under review](#) — solar specified as firming for gas, the reverse of the usual diesel-backup arrangement. [An initial 5 MW solar development was assessed during the quarter and an extension of the gas gathering network to connect a further production well is stated subject to funding](#); neither carries a capital cost, approval or date, and the company states both are work-programme items rather than guidance. The second gates the data centre: capacity growth turns on upstream gas work rather than on demand.

Cybersecurity

A published account documents a [growing digital safety problem](#). It is journalistic and carries no measure: no incident count, reporting route or response instrument accompanies it, which is what the record can and cannot say.

DPI

Digital Identity and CRVS

The credential's problem this month is forgery rather than production. The labour and home affairs ministry [is contending with a cartel producing fake identity documents](#). That is a statement about the integrity of the Omang credential, not only about the backlog in issuing it, and the two compound each other: a slow replacement queue is what makes a forged card useful. No arrest, prosecution or volume figure is in the record held.

Digital Payments and Fintech

The month's three payments developments are all commercial and narrow. A commercial bank and the Yellow Light Taxi Association [launched card acceptance on the bank's mobile tap product for taxi operators in Gaborone on 9 August](#), with access to business loans of up to P60,000 conditioned on the formal banking history the operators build through it. It is one bank and one association; no operator count, uptake figure or fee schedule is stated, and the credit on offer is tied to banking with the institution providing the terminal. Nine days later a remittance operator [issued a card on its wallet through a commercial bank and an international scheme](#), adding ATM withdrawal, in-store payment and domestic online purchase to a wallet that carried transfer and cash-out only. The operator's own account of the Companion Card puts the point of it plainly: [no separate bank account is required and the card works across every mobile network in the country, against an estimated 38 per cent of adults unbanked](#). Here too there is no customer count, issuance volume or fee schedule on the record. A commercial bank and an international card

scheme then [opened online acceptance of that scheme's cards to participating merchants in nine African markets including Botswana on 19 August](#), settling in local currency, US dollars or both; the merchant count is given for the nine markets together and not for Botswana. The national payment switch and the citizen wallet both remain at Planned.

Registries

The vital-statistics report [describes the births and deaths registration system as partially automated and decentralised](#) – a description of the system rather than a change to it. Separately, government [committed in Parliament on 19 August to an electoral-reform package including electronic voter registration](#), with no bill, supplier, cost or date attached.

Sectoral management information systems

The health ministry [signed a ten-year strategic partnership with a foreign health-systems operator](#). The announcement is the counterparty's; no contract value, list of systems, data-handling terms or governance arrangement is published, so a ten-year commitment sits on the ledger with nothing describing what it obliges either side to do.

Other GovTech and e-Gov

A tax adviser's reading of the new Value Added Tax Act, in force since 1 July, [puts mandatory electronic invoicing among the obligations the Act provides for](#), which would give the revenue service transaction-level visibility as sales occur. No start date, threshold or scope has been published, and the reading is the adviser's rather than the revenue service's.

Technology

ICT Industry

The state wholesale network operator [presented its first integrated report, for the year ended 31 March 2025, at its annual general meeting on 13 August, with revenue down on the year, and reported its 2025/26 local access projects complete](#). Publishing an integrated report is itself part of the movement: the operator has not accounted for itself in one document before.

Inclusion

Access to services

The Ministry of Youth and Gender Affairs [describes the Department of Gender Affairs as secretariat to the National Gender Commission](#), the standing institution behind this subject. Nothing else in the inclusion ledger moved in this window; the gender-based violence programme and the one-stop centres both date from earlier in the year.

Digital divides

The creative sector was surveyed for a digital purpose. A two-day multistakeholder workshop in Gaborone [mapped Botswana's creative industries to shape a more inclusive digital future](#). A mapping is a starting position; the record held carries no output from it and no policy it is to feed.

Data

National statistics

The statistics office and the national university [launched a second Statistics Development Strategy for 2026 to 2030 on 12 August](#), framed as a roadmap to an agile and responsive statistical system and aligned to the twelfth national development plan. No budget, delivery milestone or indicator set is published with it.

Geopolitics

China activities

China's ambassador [publicly offered AI cooperation in smart mining, digital government and talent training, pitching Chinese AI technology as a lever for economic diversification and pointing to a July 2026 pledge of 5,000 AI training places for developing countries and AI application cooperation centres for bodies including the African Union](#). It is an offer rather than an instrument: no Botswanan response, memorandum or programme is on file.

Gulf/UAE activities

The heads of agreement behind the data centre are unchanged, and the [operator's quarterly account of 3 August does not name the counterparty](#). It remains the only source of its kind the base holds for Botswana at any date.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
