

MONTHLY UPDATE

Gambia: monthly update, August – September 2026

Edition of 2026-09-02 • 16 systems and instruments tracked

Developments summarised from sources published between the beginning of last month and today.

SUMMARY OF THE MONTH • GOVERNANCE • FINANCE • DPI • DATA

Summary of the month

Identity and elections were the month's two threads. The government [launched the first phase of the new biometric national identity card, publishing a phased rollout calendar and a fee](#), and published its first unified land policy, which [mandates a digitalised national land administration system and a centralised land information system](#).

The electoral register is contested. Opposition parties put it to the commission that [212,095 supplementary registrations had been announced against 179,445 records on the data distributed to them](#), and the [commission's chairman gave a public assurance on the register's credibility without a reconciled figure being published](#). Elsewhere the civil servant and pensioner verification exercise [was suspended up-country over technical difficulties](#), the press union [reported the access-to-information law still largely unimplemented](#), and Senegal and Gambia [held the first steering-committee session of their digital cooperation memorandum at Banjul on 29 August](#).

Governance

Strategies, plans and policies

The policy shelf was restocked, with an unusually frank admission attached. The Gambia [validated a ten-year science, technology and innovation policy for 2027-2035 after its minister conceded the previous one achieved none of its objectives](#). A minister saying so on the record is worth more than the policy document itself, because it dates the failure the successor has to avoid. Cabinet separately [approved a bill to establish a national research, development and innovation council](#); the council does not yet exist.

Legislation and regulation

An Act already in force showed what passing one is worth on its own: the press union reported on 7 August that [most public institutions have yet to appoint the information officers the Access to Information Act requires, and that twenty-one-day requests go unanswered](#). No government response, compliance count or enforcement action is on record. The Communications Bill 2025, meanwhile, stayed in committee. Two Assembly committees [met the Press Union and the Media Council on 18 July 2026](#); the Union set out the media laws it wants repealed alongside the bill, and members said they could take stakeholder views into committee but not debate it publicly.

A second instrument was validated on [31 July 2026: the State Intelligence Service Bill](#), at a workshop attended by the National Security Adviser, the Chief of Defence Staff, the Assembly's defence committee and civil society. The Adviser said the draft prohibits torture, unlawful detention and political targeting, requires judicial warrants and oversight for intrusive measures, and gives the Assembly review of the Service's budgets. Its threat frame is

cybercrime, espionage, disinformation and organised crime, so it is where Gambian communications interception would sit. The text is not held, the Bill has not been tabled, and it does not appear in the Assembly's bills library, checked 2026-08-08.

Data protection

The body that carries both of the country's information statutes surfaced in the record for the first time this window, and it surfaced as a recipient of support rather than as a regulator acting. The Information Commission, responsible for the Access to Information Act 2021 and the Personal Data Protection and Privacy Act 2025, is [receiving UNFPA-funded support under the Peacebuilding Fund's Public Accountability Project to build a communication strategy raising public awareness of both statutes](#). No budget, staffing, caseload or enforcement record for the commission is held, and awareness-raising support is not evidence of capacity to enforce.

Regional collaboration

The revenue authority [hosted the seventh ATAF Heads of Tax Administrations Master Class in Banjul on 23-24 July 2026](#). The Forum's executive secretary argued from Rwanda, Kenya and Morocco that digital systems deliver only alongside governance reform — "technology alone collects nothing" — and [pressed for a united African position at the United Nations](#).

The bilateral channel that bears on connectivity moved from signature to work. The June 2026 telecommunications and digital-economy memorandum with Senegal [went into implementation around four priorities — connectivity, cybersecurity, skills and digital transformation — with the Senegalese telecommunications and digital minister travelling to Banjul to agree the first joint work, the two regulators having separately deepened cooperation on frequency coordination, service quality and cross-border roaming](#). The structural case for it is the country's own: a limited terrestrial fibre build and dependence on a single submarine cable for international access, with only limited terrestrial redundancy through Senegal. No work programme, budget or timetable is published. That work took its first steering-committee session at [Banjul on 29 August 2026](#), where the four priorities were settled as infrastructure and interoperability, cyber resilience, capacity building and regulatory harmonisation, with rural electronic-government access named among them. No timetable, budget or named deliverable is attached to any of the four.

Finance

Domestic budget appropriations and expenditure

The finance ministry gave its fullest account yet of what digitalised collection has recovered. On [30 July 2026 the minister said total tax collected rose from D11 billion in 2022 to D25 billion in 2025](#), with rate rises only on gambling, alcohol and tobacco, and credited a named stack running from ASYCUDA World and digital excise stamps to fuel marking, rental tax digitalisation and electronic invoicing. He read reforms lifting collections by more than 100% as evidence of prior leakage rather than of under-taxation, and said tax to GDP moved from [9% in 2022 to 13% in 2025](#). It is an attribution by the collecting side, not an evaluation.

Four days later the revenue authority [published a 2026 target of D27.5 billion](#) — the first forward number in the series, and the first testable one. The implied step from 2025 is about a tenth, far below the run rate the attribution rests on.

DPI

Digital Identity and CRVS

The [National Identity Management System](#) went live on 1 July 2026, issuing GAM ID cards on the spot, with nationwide enrolment from 4 August 2026. On 7 August the interior ministry [began a nationwide rollout of new ten-year biometric national identity cards, with registration opening simultaneously at six centres](#), produced with a Ghana-based supplier. No enrolment or issuance figure has been published since launch, so the system's reach is unestablished.

The rollout got the calendar the base had been missing. The government [published the phased schedule and fee structure: registration extends to Sibanor and Jarra Soma on 7 September, to Barra, Kerewan, Farafenni and Kaur on 11 September and to Janjanbureh, Basse and Fatoto on 21 September, with a first-time card at D450 waived during the rollout for holders of a valid immigration department card](#). An applicant with no passport, birth certificate or prior document must be vouched for by both the Alkalo and the Seyfo of their place of residence.

Digital Payments and Fintech

The country appears here in a survey of other people's pilots rather than in an account of its own. A UN development agency [names a wallet pilot in the Gambia among blockchain-based payment-distribution schemes said to cut distribution costs from about 10% to as little as 2%](#). The cost figure is the agency's own and describes its portfolio rather than this pilot; no caseload, value distributed or evaluation is held for the Gambian instance.

Registries

The country published its first unified land policy, and it is the month's clearest statement of intent about a public register. The [National Land Policy 2026-2035 mandates a digitalised National Land Administration System, a centralised Land Information System and digitised land registration](#), alongside new Certificates of Customary Ownership, and carries a costed ten-year implementation roadmap. It is a mandate rather than a build: no supplier, budget line, custodian or start date is stated for either system, and no data-protection provision for the land record is reported — in a year in which the Personal Data Protection and Privacy Act 2025 came into force.

A register the country already runs was disputed in the same week. Opposition parties put it to the electoral commission that [212,095 supplementary registrations had been announced against 179,445 records on the data distributed to them](#), a gap the commission attributed to unverified processing outputs. No reconciled figure has been published, and a presidential election is due this year.

Other GovTech and e-Gov

The revenue authority said on 30 July 2026 that [South African and Rwandan customs officials will study its digital excise tax stamp](#), after officials from Nigeria, Senegal and Sierra Leone; the commissioner general attached to it [claimed 95% reduction in smuggling of excisable goods](#), a figure with no method, made by the authority whose system is being studied. The finance ministry also [named a planned Integrated Tax Administration System](#), with no procurement, vendor or timetable.

The trade ministry said on 4 August 2026 that [a Digital Single Window Business Registration System is being finalised](#), with no launch date.

The electoral commission's digitalisation produced its first published contest figure. At a stakeholders' forum on 7 August the chief electoral officer disclosed [1,600 objections filed against the 2026 supplementary voter roll](#), on eligibility and residency, now before Revising Court Magistrates ahead of the provisional register being merged with the 2021 Voter Register. No denominator of supplementary registrations, no outcome of the hearings and no merged register total is held.

Data

Open data

One measured position moved into the record. The Gambia [ranked third in sub-Saharan Africa on budget transparency in the 2025 open budget survey](#). Budget transparency and open data are different things: the survey measures what a government publishes about its own spending, and the record held still carries no dataset count or portal for The Gambia.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
