

MONTHLY UPDATE

Comoros: monthly update, August – September 2026

Edition of 2026-09-07 • 26 systems and instruments tracked

Developments summarised from sources published between the beginning of last month and today.

SUMMARY OF THE MONTH • GOVERNANCE • ICT INFRASTRUCTURE • DPI • DIGITALISATION • TECHNOLOGY • CAPACITY • INCLUSION • DATA

Summary of the month

Twenty-three rows moved, and the month divides into three kinds of thing. One failure: the mobile-money interface to prepaid electricity meters [let meter credit go uncollected on Mwali](#), the only regression on the ledger, on an island whose thermal plant was the same month [running on a seventh of the diesel it needs](#).

One set of things validated rather than built: a [national data governance strategy for 2027 to 2031](#) went to a [workshop in Moroni on 24 and 25 August](#), and the citizen portal that would federate government services [entered the record as a concept note still asking ministries what platforms they have](#).

And one set of standing positions the base had simply never recorded - the university's technology departments, the justice ministry's complaint form, the earth-observation dashboard covering the country, and the [statistics institute's microdata archive at fifteen datasets](#). None of them is new; all of them are newly on file, which is what a backfill month looks like.

Governance

Strategies, plans and policies

ANADEN, the digital development agency, [held the first meeting of its board of directors on 27 July 2026 at the Hôtel Retaj in Moroni](#), members having been named by decree n°26-075/PR of 11 June 2026. The board adopted its rules of procedure and elected Nouridine Mohamed of the Commissariat général au Plan as chair, Najwa Aïchem Hissami Eddine of the Presidency of the Union as vice-chair and El Amine Souef of the ICT ministry as rapporteur. It then examined ANADEN's 2026 action plan, presented by director-general Said Mouinou Ahamada, who [framed the session as the institutional footing for delivery of the Stratégie Comores Numérique 2028](#) and called for tighter coordination between the state bodies represented on the board. The agency had operated without constituted governance organs since the decree naming the board was signed seven weeks earlier.

A second strategy was validated in the same period, this one on data: government, private sector and civil society met the African Union development agency in Moroni on 24 and 25 August to [review and validate a national data governance strategy for 2027 to 2031 over five pillars - digital infrastructure, data governance, interoperability, value creation and data skills](#). Validation at a workshop is not adoption: the text is not published and no adopting instrument, date, budget or responsible body is on record.

Standards

The government's own concept note for a single citizen portal [names an interoperability framework and a government enterprise architecture as components of the Plan National e-Gouv](#). It is the first record in the base of either, and neither document is published: what the note asks for is a census of the e-government platforms ministries have already built. The page carries no date and is dated by the day it was retrieved.

ICT Infrastructure

Connectivity

Comores Télécom [revised its retail fibre and mobile offer on 15 July 2026](#), cutting the entry fibre tariff from KMF 32,500 to KMF 30,000 a month while raising the basic allowance from 800 GB to 850 GB and adding unlimited calls to fixed lines. [Director-general Ali Hadji Mmadi also announced eSIM provisioning – KMF 5,000 to migrate an existing SIM, KMF 10,000 for a new one – and two paid value-added SMS services, a pharmacy-on-duty locator and prayer-time notifications](#). The account is the operator's own press event, and its internal dateline is inconsistent: it describes the launch as "yesterday, Monday 15 July," though 15 July 2026 fell on a Wednesday, so the date's precision is flagged uncertain.

The connectivity project the agency carries reached the stage before financing. At a technical meeting on 10 August the [African Development Bank and the Multilateral Cooperation Center for Development Finance told the finance ministry they were ready to fund the feasibility studies as a grant](#), the project covering data-centre studies and inter-island connectivity. No commitment amount, study contract or timetable is stated, so no finance record was built.

Energy

The thermal plant on Mwali was [down to 1,000 litres of diesel a day against a stated requirement of 7,000, with a total blackout feared](#) on 4 August. The island has no fuel depot sized to its needs and depends on maritime resupply, and the account records repeated earlier ruptures in the same year. It is the first measured figure for fuel supply to any island's generation in the base.

DPI

Digital Identity and CRVS

At the African civil registration day in Moroni on 10 August, the interior minister and the modernisation project's coordinator [tied digitised birth registration, particularly for newborns in rural communities, to legal identity, with the children's fund reaffirming support](#). It is a restatement of intent rather than a system: no registration rate is on record at either end of the window, and the civil-status agency the 2023 law provides for is still a draft decree.

Digital Payments and Fintech

A fault between the mobile-money service and the utility's prepaid electricity meters on Moheli [let subscribers credit their meters without the amounts being collected](#), with presumed losses of 200 million francs. The figure is presumed in the reporting rather than confirmed by either party, and no remediation, recovery or audit has followed.

Registries

The Registre social unique (RSU) reported [62,000 households enrolled as of 10 July 2026](#), a figure the World Bank's Comoros representative, Amada Aida, called the most complete socio-economic database ever built in the country. The registry was created by decree n°20-090/PR of 23 June 2020 and is intended as the reference base for targeting social-protection programmes. No participation rate against a national household count and no completion date is

stated in the account. The civil-registry programme beside it was priced rather than advanced: a consultant recruited by the children's fund [put the residual financing need for the reform at EUR 9,009,900 at a presentation in Moroni on 14 August](#), ahead of an international resource-mobilisation mission and a partners' conference. None of it is committed on the record.

Sectoral management information systems

The base holds one movement on school records this window, and it is private rather than ministerial. Cschool, a school-management platform built to centralise pupil enrolment, report cards, examinations, financial tracking, parent communication and online payment of fees, [was launched at Comor'Lab on 25 August](#); no adoption decision, procurement route or school count is stated, and the hosting association's call for the education ministry to require interoperability with existing systems drew no answer on adoption.

Other GovTech and e-Gov

The Portail unique du citoyen entered the base as a concept note: a single portal meant to [gather every sectoral e-government portal and service in one place, set inside the national e-government plan and the 2028 digital strategy](#). The initiative is still asking government entities to report the platforms they have built, so that a database of them can be assembled before deployment. No build, supplier, budget or date is stated.

Digitalisation

Rural digital data capture

The civil-status modernisation project took its design into the countryside, [consulting midwives, village chiefs, cadis and mayors at Fomboni on Mwali about registration difficulties on 28 August and continuing into the rural districts of Djando and Nioumachoi](#), with still-unregistered rural residents named as the problem to solve. Consultation is not digitisation: no rural registry office is recorded as converted, and no office count exists on file.

Technology

AI

A Comorian graduate student, Soilahoudine Mohamed of Mvouni, [launched Komori Tts on 28 July 2026, described as the first text-to-speech model for Shikomori](#), in an account published on 4 August. He states that no speech-synthesis model existed for the language before this, and names two constraints: the cost of the computing resources needed to train it, and the volume of paired text and audio available. Extension to shindzuani, shimwali and shimaore is stalled for the same reason, with too few translators and validators so far, and the site's translation component remains experimental. The project is privately and individually funded, not a state or institutional programme.

Innovation ecosystem

The hackathon launched in April closed its first phase, [a hundred young people trained and ten finalists funded at EUR 1,500 to 5,000 each at a ceremony on 6 August, under a EUR 4 million European Union programme implemented by the French technical cooperation agency](#). It is the most concrete completed outcome the base holds for Comorian start-ups, and it is a grant round. No start-up statute or domestic innovation fund exists.

Capacity

Literacy

The one literacy development in the window is an announcement rather than an activity. A programme launched on 2 September 2026 by the African Development Bank and AXIAN carries a training component [to give financial and digital skills training to 25,000 women across Madagascar, Tanzania, Senegal, Togo and Comoros](#), alongside digital financial products offered in the first three of those countries only. No Comorian allocation, timetable, provider or curriculum is published, so what the country receives from it cannot yet be stated.

Training and skills

Two pupils of the private école Mouigni Baraka, Anmar Mohamed and Hafsoit Idrisse, [became Comoros's first entrants to the International Olympiad in Artificial Intelligence, competing at the third edition in Astana, Kazakhstan, from 2 to 8 August 2026](#), selected from four shortlisted candidates drawn from several schools. The delegation was led by Chamsoudine Soudjay, secretary-general of the Association comorienne des technologies de l'information et de la communication (ACTIC), and entered through the Olympiad's GAITE (Global AI Talent Empowerment) programme for emerging nations, with the participation funded jointly by ANADEN, its supervising ministry and ACTIC Academy rather than by any domestic training programme. No result is on record, and the competition's own close falls after this window.

The standing public provision was recorded for the first time: the university's [technology institute carries departments in computer engineering, information-systems administration and security, and network administration and security](#). No enrolment, graduation or staffing figure is published for any of them, and the institute's own presentation fields on the university site are blank.

Research institutions

The research institute that has run the data-governance work since May [recorded the national data strategy as validated on 26 August, delivered through a joint African Union, European Union and German cooperation project after technical capacity-building on localising the continental data policy framework](#). It is the third such strategy the project has delivered, after the Gambia and Somalia. The research contribution on file is a foreign institute's; no Comorian department is named as authoring any of it.

Inclusion

Access to services

The justice ministry's site carries a [live contact form letting a citizen select a complaint as the object of a request, alongside administrative information, case follow-up and document access](#); it was built under a French-financed justice project. It is the widest general-purpose citizen feedback channel in the base, and no response time, case count or escalation route is stated. The page is undated and is dated by the day it was retrieved.

Data

National statistics

The statistics institute ran a [sensitisation campaign across the archipelago's governors, prefects, mayors and village chiefs and held a five-day donor-funded training-of-trainers workshop on survey methodology, questionnaire design and electronic data-collection tools](#), ahead of the annual agricultural survey's rollout. It follows the second general

agricultural census, whose results were published in April, and no first survey round or results date is on record. The source dates the workshop inconsistently with its own reference to the previous week, so only the campaign's dates are internally reliable.

The census apparatus moved alongside it: [the fifth population and housing census finalised its methodological and digital instruments at a retreat from 10 to 17 August](#). No enumeration date is published.

Two standing instruments entered the base at the end of the month, both dated by retrieval rather than by publication. The institute's [national microdata archive held fifteen datasets at 23 August](#), and a [modernisation project with the institute as national project owner is running, prioritising disaster and fisheries data and the institute's own digital infrastructure for statistical collection, processing, dissemination and storage](#). Neither carries an output or a completion date.

Open data

The statistics institute's [national microdata archive held fifteen datasets at 23 August, searchable by study with documentation and microdata](#), two of them added inside the year: the 2024 household living-conditions survey and the second agricultural census. Access to individual files requires registration rather than an open licence, and no open-data policy, licence or release calendar sits behind it. Nothing outside the statistical system publishes a dataset at all.

Use of satellite data

The food and agriculture organisation's earth observation portal [publishes vegetation, agricultural stress, drought and precipitation indicators for the Comoros, derived from two polar-orbiting satellite series and from external precipitation estimates](#). The system covering the country is not the country's: it is not established as government-operated, and no Comorian ministry or agency is named anywhere on file as using its outputs. The page is a live dashboard, dated by the day it was retrieved.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
