

PROGRESS REPORT

Chad: progress report, September 2025 – September 2026

Edition of 2026-09-08 • 166 systems and instruments tracked

GOVERNANCE • FINANCE • ICT INFRASTRUCTURE • DPI • DIGITALISATION • TECHNOLOGY • CAPACITY •
INCLUSION • DATA • GEOPOLITICS • WHERE THE RECORD IS THIN

This report asks the same set of questions of every country. The rows below are a fixed frame of indicators, one row each, chosen in advance and covering all thirty-eight subjects the base tracks — so what appears here is decided by the frame and not by whichever records happened to accumulate. Each row says what happened on that indicator during the period, with every claim linked to the source it rests on.

Where a row reads *No evidence*, the base holds nothing on that indicator. **That is a statement about this base, not about the country** — it does not mean nothing exists, only that nothing has been collected here yet. The rows that carry evidence say what it is; the rows that do not are left to speak for themselves.

The period is 2025-09-01 to 2026-09-08.

Progress values. *Advanced* — a system entered service, a stage was completed or an instrument was made. *Stalled* — a stated target passed without delivery. *Regressed* — an instrument was withdrawn or neutralised, or a reported position worsened. *Mixed* — the indicator's instruments moved in different directions in the period; the clause after the comma names which moved which way. *No change* — the base holds a standing position and nothing in the period touched it. *No evidence* — the base holds nothing on this indicator at all. A value may carry a qualifying clause after a comma, as in *Advanced, regulations still pending*.

Governance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	Digital transformation strategy	A national connectivity strategy launched with US\$1.5bn of planned investment to 2030, with no implementation report, expenditure statement or monitoring framework published. The strategy was developed with lender support and external analysis; its horizon is rendered as 2030 in one account and as within six years in another (strategy, framework, registry). Nothing is published against it: no implementation report, expenditure statement or monitoring framework at any date. Its named components — a third mobile operator, the fibre backbone, the data centre — are each recorded separately and none has a delivery figure. An economic and social council adopted recommendations on the digital transition in August 2026; it is an advisory body, nothing binds government to act, and no response is on record (recommendations).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	ICT strategy	One article of the 2014 electronic communications and postal law was amended by ordinance, ratified by the Senate in December 2025 after the National Assembly in October. The ordinance was signed in August 2025, approved by the National Assembly on 22 October by 105 to 31 with 2 abstentions, and ratified by the Senate on 23 December by 65 of 67 (ratification, framework). The 2014 law is held only as a degraded scan with a proxied date, the two accounts number the instruments differently, and the amendment's subject is described as licence award conditions while the held article sits under sanctions (law). So a sector statute was amended by a route the base can date and on a subject it cannot confirm.	ADVANCED
Strategies, plans and policies	Broadband strategy	There is no standalone broadband strategy; Tchad Connexion 2030 carries the targets, and two-thirds of its funding was pledged in November 2025. The national development plan is the operative instrument, setting 80 per cent internet coverage and privatisation of the state operator by 2030 against a 30 billion dollar envelope (plan). A financing round table in Abu Dhabi closed with 20.5 billion dollars of the 30 billion ask pledged (round table); the figure is multisectoral, not a broadband envelope. The monitoring architecture for the plan was installed on 9 December 2025 (framework). So the coverage target has a plan, a monitoring body and a pledge total, and no published broadband allocation inside any of them.	ADVANCED
Strategies, plans and policies	Data storage / cloud strategy	No cloud or hosting strategy is adopted; the national data centre is built and not certified, with 1,275 km of backbone deployed. The national ICT agency's own statement puts the standing position: a national data centre built with the vendor and the state fibre programme, but not yet audited, certified or in official operation (agency). A ministerial review of 19 May 2026 has the building complete and equipment installed, the security audit done and certification outstanding, institutional micro-data-centres awaiting configuration and interconnection, 1,275 km of national backbone fibre deployed, and repayment of the programme financing begun (review). Chad is exploring a partnership with an American firm to audit, certify and secure the centre before commissioning (partnership) – explored, not signed. The strategy that would say what runs there is not held.	ADVANCED
Strategies, plans and policies	Data interoperability framework / roadmap	No national interoperability framework is published; the agency states the mandate and administrations sign bilateral protocols instead. The national ICT agency states that it coordinates government information systems to ensure their interoperability, and publishes no standard, schema or exchange rule against that mandate (mandate). What exists is point to point. The tax and treasury directorates agreed automated, secured, real-time exchange of assessments, collections, arrears and payments on 1 April 2026 (protocol), extended on 21 July 2026 to customs and the central bank (extension). The first phase of a national data governance strategy closed on 21 May 2026 naming interoperability among the priorities to be reinforced (phase). No technical specification for any of the protocols is published.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Strategies, plans and policies	AI strategy	No national AI strategy is adopted; Chad stated a position at the first UN AI governance dialogue in July 2026. At the first global dialogue on artificial-intelligence governance in Geneva on 6 July 2026 the minister set out a position — artificial intelligence to be ethical, frugal, balanced and sovereign — with a plea for differentiated international cooperation and priority multilateral financing for states with limited digital infrastructure (position). The official declaration the following day records adherence to the 2021 international recommendation and a readiness diagnostic under way, with no adopted national strategy (declaration). The institutional half moved first: a directorate-general for artificial intelligence was created inside the ministry in October 2025 (directorate). Chad has a body before it has a strategy.	ADVANCED
Strategies, plans and policies	Data localisation policies	No data-localisation rule exists; the digital code drafting committee is the one instrument that could carry one, and it states none. A new drafting committee for the digital code was installed on 6 May 2026 with thirty days to report — a shorter deadline than the forty-five days reported of the April 2026 committee, which the base has not reconciled — and the account states no localisation or local-hosting provision (committee). The code was still an avant-projet in February 2026, its drafting funded through the state fibre project (workshop). The nearest thing to a residency rule is directional rather than legal: the national data centre is built and awaiting certification (centre), which is capacity, not an obligation to use it.	NO CHANGE
Strategies, plans and policies	Data governance policy	A national data governance strategy support mission was convened with the ministry in May 2026, and no draft, timetable or adoption date is published. What is held is the mission page and the ministry's terms of reference (mission). No draft strategy, timetable or adoption date exists on the record. It would sit above a country with no data-protection law, no supervisory authority and a biometric register already interconnected with the finance ministry and a mobile operator.	ADVANCED
Strategies, plans and policies	Open data policy	No open-data policy is adopted; the statistics institute runs five data portals whose microdata terms are not open. The institute lists an Open Data Portal, a national data summary page, a national statistical data archive, a goal tracker and a development-plan indicator tracker (portals). The terms behind them are restrictive: microdata users must not copy or transmit the data to anyone without prior written agreement, must cite a prescribed source line and must supply two copies of any report produced (policy). Two openings sit at validation stage: a national agricultural data collection and dissemination strategy proposing a statistics web portal, drafted with donor support in November 2025 (strategy), and the Journal Officiel platform launched in May 2026, which is public-information access rather than reusable data (platform).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	Data protection legislation	No general data-protection law or supervisory authority exists, the function having been folded into the security agency, while a law on biometric data in judicial procedures was adopted by 138 votes to 1. There is no enacted text, number or gazette reference for a general data-protection law, and the function was folded into the security agency in March 2026 (vacuum, finalisation). The biometric-data law was adopted at a plenary in April 2026. Its gazetted text is not held, so retention periods, destruction procedure, oversight body and any requirement of judicial authorisation are unknown, and deputies raised concerns in debate about inappropriate use (law). Legislating the collection of biometric data for judicial use before legislating data protection at all is the sequence, and it is the reverse of the order every other unit in this frame attempts.	MIXED a biometric-data law adopted by 138 votes to 1 while no general data-protection statute or authority exists at all
Legislation and regulation	Cybersecurity legislation	Loi 009/PR/2015 is the cybersecurity statute, and the agency under it was reformed in March 2026 with a cybercrime unit created in June. The regulator's own register of the laws it works under names Loi n. 009/PR/2015 on cybersecurity and the fight against cybercrime, alongside Loi n. 008/PR/2015 on electronic transactions and Loi n. 007/PR/2015 on the protection of personal data (register). Decret n. 148/PR/2026 of 23 March 2026 promulgated the law ratifying the January ordinance reforming the computer-security and electronic-certification agency, widening its remit to cybersecurity, personal data, electronic transactions, cybercrime, video surveillance, drones, social platforms and artificial-intelligence systems (promulgation); the Senate had ratified it 58 votes to 3 (ratification). Decret n. 2010/PR/2026 of 1 June 2026 then created a cybercrime unit inside the agency and appointed its coordinator and deputy (unit).	ADVANCED
Legislation and regulation	Legislation covering digital id	The 2016 ordinance founds the identity agency, and a December 2025 decret makes it central to official document production. The agency's own site names Ordonnance n. 001/PR/2016 as its founding instrument and states that its integrated population and secure-documents system, after enrolment and deduplication, assigns every enrolled individual a unique national identification number across 29 centres (agency). Decret n. 3004 of 5 December 2025 replaced the 1997 regime for official passports: it abolishes the special passport, resets the beneficiary list, removes the automatic entitlement of spouses, adds explicit refusal grounds and a return obligation at end of function, and makes the agency the central actor for personalisation and physical production (decret). The statistics institute's bulletin sets the civil-registration frame the identity system sits on — the 2013 civil registration law, the 2016 ordinance and a 2017 decret (bulletin).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	Digital payments legislation	There is no national payments statute; the operative law is the regional regulation of December 2016, with national practice set by convention. The central bank's own register names Reglement n. 03/CEMAC/UMAC/CM of 21 December 2016 on payment systems among the constitutive instruments in force, directly applicable to Chad as a member state (register). The national layer is contractual. The finance minister chaired a meeting on 17 February 2026 with the four payment establishments operating in Chad to build an operational framework for moving state financial flows onto mobile money and pressed for a framework convention (meeting), and on 18 February signed partnership conventions with all four allowing public revenue to be paid through their platforms (conventions). A statute a citizen could be pointed to does not exist.	ADVANCED
Legislation and regulation	Legislation enabling data interoperability	A digital code has no adopted text: a forty-five-day drafting deadline set in April 2026 expired in June with nothing on record. The code was described as finalised in December 2025 and a committee was then given forty-five days from 27 April 2026 to draft the framework; that deadline expired about 11 June with no text on record (code, finalisation, agency). The committee itself was inaugurated with thirty-four members and mandated to build on prior regulator contributions, and no output is on record (committee). A ministry system prohibition and an interoperability programme are both recorded separately as depending on a framework that does not exist.	STALLED
Legislation and regulation	AI legislation / regulations	No liability regime for artificial intelligence exists, and the only statutory mention is the reformed security agency's widened remit. UNESCO's country profile, drawn from Chad's own readiness assessment, finds that Chad regulates cyberspace, that some provisions are obsolete, and that at this stage no liability regime for artificial intelligence exists (profile). The March 2026 reform of the computer-security and electronic-certification agency names artificial-intelligence systems within its widened remit (reform) – the only statutory mention held. Chad's declaration to the Geneva dialogue records adherence to the 2021 international recommendation and a readiness diagnostic under way, with no adopted national instrument (declaration).	NO CHANGE
Legislation and regulation	E-commerce legislation	Loi 008/PR/2015 on electronic transactions is the statute; the digital code that would replace it was still a draft in 2026. The regulator's register names Loi n. 008/PR/2015 on electronic transactions among the operative statutes (register). A second workshop on the digital code drafting mission opened on 17 February 2026 discussing the avant-projet written after a December 2025 workshop, the drafting funded through the state fibre project (workshop). The electronic-communications framework moved separately: a decret of 16 January 2026 promulgated the law ratifying an August 2025 ordinance amending it (promulgation), and the March 2026 agency reform brought electronic transactions expressly into its remit (reform).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Legislation and regulation	Statistics legislation	Loi 026/PR/2019 organises statistical activity, and two instruments were made under it for the third census. The statute makes the statistics institute the central body of the national statistical system with legal personality and the status of a public administrative establishment; four application decrees sit under it (statute). A joint arrete of 6 May 2026 set the composition, powers and operation of provincial, departmental and sub-prefectoral census commissions in every administrative circumscription (arrete), and a decret of 20 July 2026 extended the main enumeration to 6 August from an original window closing 21 July (decret). The statute is also what the restrictive microdata access policy is grounded in (policy).	ADVANCED
Legislation and regulation	Access to information legislation	No freedom of information law has been adopted, and the media regulator suspended new online-newspaper applications in August 2026. UNESCO's periodic review filing states at paragraph 13 that no freedom of information law has been adopted in Chad and at paragraph 19 recommends one be introduced to international standards, against a constitutional guarantee at article 28 of the 2018 constitution (filing). On 3 August 2026 two communiques from the media regulator suspended, until further notice, the examination of applications to create online newspapers, under its 2026-2028 strategic plan, and stated that offences on digital platforms fall outside its remit for now (suspension). The one movement the other way is publication rather than access: the Journal Officiel platform launched in May 2026 gives free online access to legal texts back to 1958 (platform).	REGRESSED
Data protection	Data protection authority	An ordinance reformed the security and electronic certification agency, placing data protection and artificial-intelligence governance inside it, and there is no separate data-protection authority. The Senate ratified after National Assembly approval (ordinance). The gazetted text is not held. The base records a vote count and an ordinance number that appear in no held source, which is stated here rather than repeated as fact. Data protection and artificial-intelligence governance sitting inside a security agency, with no independent authority and no statute to enforce, is the governance arrangement this unit has. It is the frame for the biometric register, the subscriber-data interconnection and the police equipment transfer recorded below.	ADVANCED
Data protection	National data protection readiness		NO EVIDENCE
Regional collaboration	Regional policy collaboration	A regional financial inclusion strategy for 2025-2029 adopted by the central bank covers the member states; nothing in the window moved it. A Chadian delegation drew on the Togolese experience of deploying digital solutions in the agricultural sector (visit). The account is the host government's, and nothing states what Chad will adopt. The central bank adopted a regional financial inclusion strategy for 2025-2029 covering the six member states, validated by the monetary union's ministerial committee on 21 December 2023 and published in February 2025 (strategy); the base holds no member-state implementation plan, target or outturn under it.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Regional collaboration	Regional legal harmonisation	The continental cyber and data protection convention was signed in June 2015 with no ratification and no deposit as at February 2026. The depositary's status list of 2 February 2026 records signature only (status). Eleven years signed and unratified, in a country with no domestic data-protection statute either, means neither the regional nor the national instrument binds anything here.	NO CHANGE
Regional collaboration	Shared regional infrastructure	The regional free-roaming deadline of 10 February 2026 was missed, and the Commission was tasked with building a sanctions mechanism. A regional regulators' workshop hosted in December 2025 set a common framework for a regional fibre-mapping platform, a digital financial services security clinic and a free-roaming deadline of 10 February 2026 with a direct interconnection link mandated and sanctions for non-compliance (workshop). At the 45th ordinary session of the union's council of ministers in Brazzaville on 13 June 2026, formal notice was recommended against operators and regulators delaying full free roaming and the Commission was tasked with building a sanctions mechanism – so the deadline was missed (session). The fibre behind it is older: a 30 million dollar grant and credit financed Chad's leg of the regional backbone under a public-private partnership (financing).	STALLED
Regional collaboration	Cross-border data transfers	A bilateral digital-cooperation memorandum was signed in Baku in January 2026 and states no data-transfer mechanism or safeguard. The agency's own account of the memorandum, signed on 28 January 2026 and following talks begun at a development conference in November 2025, covers electronic governance, innovation and the export of digital solutions (memorandum). It establishes a bilateral channel and states no data-transfer mechanism or safeguard, which is the finding. A delegation of Azerbaijani ICT experts then worked at the agency on 17 February 2026 on modernising digital infrastructure, strengthening technical and human capacity and transferring skills, ending with a visit to the national data centre (experts). No adequacy finding, transfer authorisation or safeguard clause for any cross-border flow involving Chad is held.	ADVANCED
Standards	National interoperability standards	No national interoperability standard is published; the agency states the mandate and the data-governance roadmap names it a priority. The national ICT agency states that it coordinates government information systems to ensure their interoperability, and publishes no standard, schema or exchange rule (mandate). The first phase of the national data governance strategy roadmap closed on 21 May 2026 with a workshop naming interoperability among the national priorities to be reinforced, after a mid-May assessment mission reviewed the existing legal, institutional and technical landscape; no standard was adopted (phase). The World Bank's diagnostic finds public platforms built in silos with no shared infrastructure, secure networks, common standards or interoperability across administrations (diagnostic).	NO CHANGE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Standards	National quality standards	The regulator ran the fifteenth cycle of its service-quality audit and inaugurated strategic regulatory platforms described as a shift to continuous data-driven regulation. The fifteenth audit cycle ran September to October 2025 with findings reported in February 2026; the audit reports themselves are not held, and the regulator's own entity page states no penalty it imposed is established, against a held source recording a 2023 fine (audit, upgrades, fibre). The platforms were inaugurated by the minister in June 2026, described by the regulator as a shift from compliance-based to continuous data-driven regulation; no cost, supplier, data-retention rule, legal basis or output is on record (platforms). Fifteen audit cycles with no established penalty, and a new data-driven regulatory apparatus with no legal basis stated, are the two halves of regulation here.	ADVANCED
Standards	Adoption of international standards	The standards agency's committees adopted ten international standards as draft national norms across three sessions in July and August 2026. The standardisation law creates the agency, a national quality council and an interministerial regulation committee, and charges the agency with turning international standards into national ones (law). Three dated adoption sessions fall in the window: the national electrotechnical committee on 31 July 2026, the quality management systems committee on 5 August adopting ten international standards as draft Chadian norms, and the petroleum products committee on 7 August (sessions). In March 2026 the agency signed a cooperation protocol in Paris with the French standards body to structure the national system and align it on international standards (protocol). No published register of Chadian standards in force is held.	ADVANCED
Public debate and participation in policymaking	Non-governmental contribution to national policy	A citizens' organisation petitioned the regulator over network quality in August 2026, citing 500 signatures and 70 testimonies. The one standing multi-stakeholder mechanism is the national internet governance forum, self-described as created in 2014 to debate public internet policy between government, regulator, civil society and private sector, and carrying no binding consultation mandate (forum). Two dated instances of input fall in the window. A three-day workshop opened on 18 May 2026 drafting the first national data governance strategy included technology incubators and information-security specialists among its participants (workshop). And a citizens' organisation formally petitioned the regulator on 28 August 2026 over network coverage and quality, after a thirty-day deadline to the operator expired unanswered, citing over 500 signatures and more than 70 documented testimonies (petition).	ADVANCED
Public debate and participation in policymaking	Open discussion of government policy	A province was cut off from the internet for more than three months with no restoration on record, and the media regulator suspended examination of applications to create online newspapers until further notice. The province had been cut off since October 2024 and remained so at an internet society communique of February 2025; security reasons were cited but the base holds no official instrument, and restoration may have occurred unrecorded (shutdown). The regulator suspended examination of online newspaper applications with no end date; the communique carries no date of its own (suspension). The suspension is justified by a three-year strategic plan whose text is not held and which is known only through the communique that invokes it, one of its axes being to clean up the profession (plan).	REGRESSED

Finance

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Domestic budget appropriations and expenditure	Sustainable domestic financing of digital transformation	The whole expenditure chain was mandated through an integrated public financial management system from the 2026 budget, with generalisation pending. The mandate runs from the 2026 budget and no coverage figure, count of entities live or implementing agency is named (mandate, orientations). It is the instrument on which the zero-cash and electronic-invoice commitments recorded separately depend, and the only measure of it is that generalisation is pending.	ADVANCED
MoUs and other agreements	Strategic relationships	Talks on a digital infrastructure partnership were held with a regional incumbent operator at an international trade show, and nothing later is held. The talks took place in March 2026 (talks). Nothing later is held. It is one of six international engagements in this unit — with the United States, India, China, Azerbaijan, a regional operator and a continental bank — of which only the Chinese and continental-bank arrangements have produced signed instruments.	NO CHANGE
New investments	Mobilisation of non-state finance	20.5 billion dollars was announced secured against the national plan in November 2025, 4.1 billion of it private. The 2017 ordinance fixes the legal regime for public-private partnership in 57 articles and abrogates contrary prior provisions (ordinance). At the close of the Emirates-Chad trade and investment forum in Abu Dhabi on 10 and 11 November 2025, Chad announced 20.5 billion dollars secured against its five-year plan — 4.1 billion from forty private companies and 16.4 billion in donor pledges (forum). In January 2026 the President promulgated the law ratifying an Emirates-Chad investment protection agreement, among ten laws that also carried an amendment to the electronic-communications framework (promulgation). No partnership contract signed under the ordinance in the digital sector is held.	ADVANCED
New investments	Development-partner project financing	A digital transformation project is disbursing and delivered 3,000 payment terminals, a business-climate and administration modernisation grant was signed in August 2026, and Chinese concessional lending funds the state connectivity programme. The digital transformation project's envelope is carried as FCFA 76.45bn in one source and US\$92.2m in another — the first close to total project cost and the second to the grant alone, with no source saying so — and the board approval date differs between the portal and the appraisal document (project, portal, concept). The modernisation grant's first phase was signed in August 2026; the pipeline record and the signed grant do not use the same unit or total, so the local-currency figures are the reporting outlet's own conversion (grant, pipeline). The Chinese concessional loan was approved by the National Assembly in 2020, the agreement itself is not held, and a variant figure traces to an unidentified document (loan, facility), alongside a grant issued in 2019 at year precision (grant 2019). A microfinance facility reached a fourteenth disbursement (microfinance). Two more operations sit at the ends of the record: US\$120m for adaptive social safety nets, launched at Mao in April 2026 and working through the unified social registry across nine provinces (safety nets); and a 2011 appraisal proposing US\$30m for the eastern and southern fibre links, with no approval or disbursement after it (backbone appraisal).	ADVANCED

ICT Infrastructure

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	Mobile penetration	The larger operator's network investment programme has contested delivery, and fifty telecom sites and fifty kilometres of fibre were announced by an outgoing minister. The investment figure is reported at group level rather than for the national entity, and no source reconciles it with the figures the minister cited (programme, sites, operator). The fifty sites and fifty kilometres were announced at a ministry ceremony by the outgoing minister seven weeks before the portfolio changed hands, and nothing is recorded against them since (announcement). A third private mobile operator is named in the national strategy with no licensing process on record (third operator).	STALLED
Connectivity	Internet usage	Internet users reached 5.6 million in 2024 against 4.8 million in 2023, the first published movement since the 2020 observatory. The regulator's 2024 market observatory, presented on 1 October 2025, gives 5.6 million internet users against 4.8 million in 2023, 14.8 million mobile subscribers up 9.2 per cent, and sector turnover above 237 billion FCFA (observatory). The prior published national figures are four years older: 14.2 per cent of the population using internet services and 10.0 per cent using SMS in 2020, mobile penetration 53.5 per cent, 8.7 million subscribers (observatory). A trade report of September 2025 carries a 2024 industry figure of 38.6 per cent mobile penetration and internet access below 15 per cent, which does not reconcile with the regulator's own series (audit).	ADVANCED
Connectivity	Mobile affordability	A 30 per cent tariff cut was ordered in December 2021 and never audited; the minister accepted high costs in 2025. The head of state instructed a 30 per cent cut across all internet offers on 29 December 2021, reported as reaching 60 to 78 per cent on some segments, against a target of moving the cost for a minimum-wage earner from 17.8 per cent of salary in 2020 into a band of 8 to 2 per cent (instruction). The ombudsman reported on 29 October 2025 that electronic communications should be treated as a social right, and the minister of state accepted high costs, insufficient service quality and weak market regulation (report). In June 2026 the telecommunications minister argued publicly for the restoration of unlimited satellite internet offers (position). No published tariff schedule or price basket for Chad is held.	NO CHANGE
Connectivity	National fibre backbone	A seven-day ultimatum to the two mobile operators to connect to the national backbone was not complied with and no sanction was applied, and the trans-Saharan section is 60 per cent complete. The ultimatum followed a ministerial meeting; the state cited 1,275 km of fibre deployed, a figure no source reconciles with the project's own 1,200 km target, and no sanction was ever recorded as applied (ultimatum, order, link). The state connectivity programme's first phase was inaugurated at Sarh in January 2026; its 2020 specification of 2,000 km of fibre and 200 masts across twelve regions has never been restated and no delivery is reported against any figure (programme, phase). The trans-Saharan section was reported 60 per cent complete on EUR 29m of European financing, with no completion date, operator or route detail on file (section, delays). A twenty-year border-to-border concession has made no progress (concession).	STALLED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Connectivity	International internet bandwidth	The fibre corridor memorandum to a neighbour was suspended pending revision, and that route is the country's only entry point for international submarine-cable capacity. The ministry ordered the two operators to correct the clauses and sign; the date of the suspension is not established in any source held (corridor, analysis, sites). For a landlocked country this route is the only entry point for international submarine-cable capacity on the record. Suspending the instrument that would build it is the single most consequential regression in this unit.	REGRESSED
Connectivity	Internet Exchange Points	The national internet exchange point held its first-year general assembly and adopted statutes and internal rules. The assembly was held in May 2026, institutionalising the exchange (exchange). Its stated purpose is to stop traffic leaving the country and returning, and the cost and latency benefit is asserted and never quantified. No member count, traffic volume or peering figure is published.	ADVANCED
Connectivity	Satellite broadband licensing and availability	A satellite operating licence was granted and commercial launch announced, under an order on conditions of use that mandates identification and retention ahead of any data-protection law. The licence was granted in March 2025 and commercial launch was announced by the minister in June 2026; no subscriber count is held at any date, and the government complained to the operator in Washington in May 2026 about service quality and tariffs it judged less competitive than in other African markets (licence, launch, service, complaint). The order on conditions of use was signed in August 2025. Its own number and text are not held, and identification and retention are mandated ahead of any data-protection law (order). Requiring subscriber identification and data retention in a country with no protection statute and no supervisory authority is the pattern this unit repeats.	ADVANCED
Data Storage	Local data centre capacity (all providers)	The national data centre is built and awaiting audit and certification, an eighteen-month slip on a January 2025 statement that inauguration was forthcoming. Building and operational equipment are confirmed complete with audit and certification the last step before inauguration; the facility is four storeys at the capital, measured at about 500 square metres per level and about 2,000 in total by two accounts (centre, audit, finalisation, sovereignty). One hundred government micro data centres are provided for as a clause of the audit agreement rather than as a project with its own instrument (micro centres). A facility complete but uninaugurated for eighteen months, with a hundred more announced inside an audit contract, is the shape of this unit's hosting programme.	ADVANCED
Data Storage	Local data centre capacity (national providers)		NO EVIDENCE
Data Storage	Off-site backup capacity		NO EVIDENCE

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Energy	Sufficient energy and water for data centres	A 50 MW solar plant can inject only 12 MW, and the capital was load-shed for close to a month in August 2026. The Djermaya photovoltaic plant was inaugurated on 28 September 2025 at 50 MW over 46 hectares and 81,340 panels, and the head of state stated the same week that the national network can take only 12 MW of it (plant). Nominal generation added is not available capacity for a critical load. After the Farcha thermal plant fire of late July 2026, parts of the capital had been load-shed for close to a month by 20 August with no restart date (fire) — the grid a national data centre depends on. The compact records 487 MW installed against 235 MW available and national water access at 63.5 per cent (compact).	REGRESSED
Energy	Grid reliability	The energy compact records 7,628 hours of outages on the capital's network in a year; a plant fire left it load-shed for a month. The government's energy compact of December 2024 records 487 MW installed against 235 MW available, a generation mix 90 per cent thermal, 7,628 hours and 41 minutes of outages on the capital's network over a year, and 2030 targets of 30 per cent renewable generation and 15 per cent electricity access (compact). The head of state stated in July 2025 that national generation stands at 160 MW against 300 MW needed by the capital alone (review). After a fire at the Farcha thermal plant in late July 2026, load-shedding in parts of the capital had run close to a month by 20 August, the utility stating that restarting the burnt sets needs new equipment and giving no date (fire).	REGRESSED
Energy	Rural electrification	145,000 subsidised solar kits are being sold across all 23 provinces, against a target of 30 per cent access by 2027. Under a programme financed at close to 295 million dollars, 145,000 subsidised solar kits worth a hundred dollars each are being sold at the equivalent of twenty across all 23 provinces, expected to reach about six million people, targeting a rise in electricity access from 6 per cent in 2018 to 30 per cent in 2027 (programme). On 17 February 2026 the prime minister laid the first stone for three lender-financed hybrid plants outside the capital — Bongor at 2 MWh solar with 1 MWh storage and 2 MVA thermal, Bol at 1 MWh, Biltine at 1 MW — on a twelve-month build, with fifty schools and clinics to be electrified (plants). The rural agency's twelve plants are meant to supply 48 MW and only 16 MW is available (review).	ADVANCED
Technical Capacity	Robustness of government hardware and software	Information technology equipment was transferred to the national police for cybercrime work, with nothing stated about training, data retention or legal basis. The handover took place in July 2026 (transfer). Nothing is stated about training, camera or hotline data retention, or the legal basis for the surveillance capability. Equipping a police force for cybercrime in a country with no data-protection statute, no supervisory authority and the protection function folded into a security agency is the recurring arrangement here stated in its sharpest form.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Technical Capacity	Local capacity to maintain, manage and develop government systems	The diagnostic finds platforms built in silos and digital skills scarce; the specialist school graduated 121 in December 2025. The country diagnostic finds public platforms built in silos with no shared infrastructure, secure networks, common standards or interoperability across administrations, digital skills scarce, and Chad 189th of 193 on the United Nations e-government index (diagnostic). The national ICT school graduated 121 laureates of its fifth promotion on 17 December 2025 (graduation) and received 45 computers from the national agency in July 2026 (equipment). Azerbaijani ICT experts worked at the agency in February 2026 on modernising infrastructure and transferring skills (experts). No establishment or vacancy figure for government ICT posts is published.	ADVANCED
Cybersecurity	National cybersecurity readiness	A national cybersecurity strategy launched in December 2022 has no adopted text, and a tripartite audit and certification agreement covers the national data centre. The strategy is known only from a single relayed sentence; no document, launch date or adoption record is held (strategy). The audit agreement was signed between the digital agency, the security agency and a private firm. A United States firm separately offered to audit and certify the same facility in May 2026 and no source connects the two mandates (agreement, security). A comparative study of online job scams published in August 2026 is the only measure of harm in this ledger; it surveys respondents rather than reporting a crime series, and carries no sample size or national total (scams).	NO CHANGE

DPI

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	National data exchange system	The 2027 budget orientations provide for prohibiting ministry systems incompatible with existing platforms, and accession to a regional digital integration programme is set for a second deployment phase. The budget-framing text is not held and the ministry site was unreachable; the event date is unestablished, and no cost, phasing or implementing agency is named (prohibition). Accession to the regional programme reaches the base as a single mention in a mission read-out (accession). Prohibiting incompatible systems presupposes a standard to be compatible with, and the digital code that would supply it has no adopted text.	ADVANCED
Data Exchange	Use of digital id in other systems	The finance ministry gained a secured channel to the biometric register in March 2026, and an operator queries the identity database. A protocol signed on 10 March 2026 gives the finance ministry a secured channel to consult the national biometric population register for identification, verification and authentication in budget processes (protocol). An agreement with a mobile operator lets it query the national identification number database to simplify subscriber identification, and lets citizens pay document issue and collection fees through the operator's wallet; no signature date, contract value, duration or data-protection condition is stated (agreement). The number is already a condition of access elsewhere: a circular of 26 September 2025 gave school leavers priority in enrolling for one because many could not register at higher-education establishments without it (circular).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Data Exchange	Interoperability of health systems	96.4 per cent of districts enter data directly into DHIS2, and a national data watch centre was inaugurated in June 2026. The health ministry moved from its legacy system to DHIS2 through a 2021 pilot in Moyen-Chari and Batha and a national launch in November 2022, with 96.4 per cent of districts entering data directly into it after the first year (system). A data watch centre was inaugurated in June 2026 under the national digital-health plan for 2025-2030, to consolidate, analyse and visualise health data nationally (centre). In April 2026 the ministry committed to a patient-centred electronic medical record with Rwandan technical assistance, listing integration with existing national systems including DHIS2 among its intended benefits (record). No interoperability specification is published.	ADVANCED
Data Exchange	Interoperability of education systems	The education compact records no interconnection across ministry databases; decentralisation now covers 16 provinces. The ministry's own compact states that the education information system functions and publishes an annual statistical yearbook but is weakly decentralised and donor-dependent, that teacher headcounts differ between it and the budget, and that interconnection of ministry databases remains to be done (compact). Decentralisation is now effective in 16 provinces across 12,863 primary schools and is to be extended to seven more, with data still analysed centrally (decentralisation). About 550,000 dollars of computing equipment – 8 servers, 168 all-in-ones, 115 laptops, 21 tablets and storage – was handed to seven provincial delegations and four central directorates on 15 June 2026 (equipment).	ADVANCED
Data Exchange	Interoperability of social protection systems	The social registry and the biometric register are not yet linked: the accord to identify every entrant by identity number was unsigned in March 2026. The unified social registry is described as centralised, dynamic, spatially aware and interoperable with other systems, carrying 684,500 households under the adaptive social protection strategy for 2025-2030 (registry). The agencies behind it met on 10 March 2026 on interoperability between the registry and the national biometric register, so that every entrant is identified by their national identification number; the accord was not yet signed (meeting). Enrolment meanwhile continues: a joint mission briefed authorities of the capital's ninth arrondissement in January 2026 ahead of a household enrolment operation (mission). Interoperable in description, not yet in fact.	ADVANCED
Digital Identity and CRVS	Robustness of system	The national biometric register concluded a real-time data-sharing agreement with the finance ministry, on a claim of single source of truth that is the agency's own. The register launched in 2020 on a French supplier's technology, and the single-source-of-truth claim is the agency's own and is not independently verified (register, refugees, agreement). Real-time sharing with the finance ministry, in a country with no data-protection statute and no supervisory authority, is a design decision nothing on record governs.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	Registration of entire population	The identity system assigns a unique number to every enrolled resident across 29 centres, against 3 per cent holding cards at appraisal. The agency's own site states that its integrated population and secure-documents system, after enrolment and deduplication, assigns every enrolled individual a unique national identification number, including refugees and residents in transit, across 29 centres (agency); the appraisal put only three per cent of Chadians holding a national identity card (appraisal). Reach has been extended by decision rather than by campaign: agents posted permanently in embassies from September 2025 (diaspora), Sudanese refugees enrolled at Abeche from 21 November 2025 (refugees), and a memorandum of 7 May 2026 covering returnees, displaced people and migrants (memorandum).	ADVANCED
Digital Identity and CRVS	National maintenance of id and credentials systems		NO EVIDENCE
Digital Identity and CRVS	Authentication	The certification agency was reformed by ordinance in January 2026 because the 2015 frame had become preventively and operationally insufficient. The council of ministers of 15 January 2026 adopted a draft ordinance reforming the national agency for computer security and electronic certification, the body created by Loi n. 006/PR/2015 of 10 February 2015 that holds the electronic certification mandate, recording that the 2015 legal frame had become insufficient (council). The reform was promulgated on 23 March 2026, widening the agency's remit to cybersecurity, personal data, electronic transactions, cybercrime, video surveillance, drones, social platforms and artificial-intelligence systems (promulgation). On the identity side, the appraisal records the system issuing the identification number, the national identity card and the passport, with three per cent of Chadians holding a card (appraisal).	ADVANCED
Digital Identity and CRVS	Digital id from birth	A child birth-registration campaign opened a six-month first phase, backed by a moratorium on court fees for supplementary birth judgments until 2030. The campaign runs a first phase of six months to December 2026; one account puts its household component in twelve provinces and another says every province (campaign, registration, identity). The fee moratorium was signed in February 2026, suspending court fees for children aged four months to seventeen years until 2030; the instrument's own text is not held and its terms are known only from launch statements (moratorium). Health-facility-integrated registration is reported by a practitioner, with stated plans to raise digitised hospital points from ninety-seven to six hundred and reach zero unregistered births by 2030 (facilities), and a francophone civil-registration project has a second phase in preparation on the organisation's own claim (project).	ADVANCED
Digital Identity and CRVS	Interoperability of birth registration and digital id	A campaign launched July 2026 aims to give a million children a birth certificate carrying a national identification number. The operation launched on 24 July 2026 aims to register and issue a secured birth certificate carrying a unique national identification number to at least a million children aged four months to seventeen, in a first phase across twelve provinces (campaign). The frame beneath it is the 2013 civil registration law, the 2016 ordinance creating the identity agency with civil registration among its missions, and a 2017 decret (bulletin). A workshop of 25 February 2026 laid groundwork for interconnecting the courts of first instance with the biometric register and covered access to supplementary judgments (workshop) — a reflection stage, with paper village registers still on the table.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Identity and CRVS	Use by other systems	A mass enrolment and subscriber-data partnership was signed with a mobile operator, wiring subscriber data into the identity register. The partnership was signed in May 2026 (partnership). It wires subscriber data into the identity register with no data-protection authority on file overseeing it. No enrolment target, retention rule, consent mechanism or regulator role is stated. Together with the finance ministry's real-time feed, that gives the register two live interconnections and no supervision.	ADVANCED
Digital Payments and Fintech	Governance role of central bank		NO EVIDENCE
Digital Payments and Fintech	G2P functionality	The finance ministry signed conventions with all four mobile-money operators in February 2026, against 0.1 per cent receiving digital state payments. The appraisal records 0.1 per cent of Chadians receiving government-to-person payments digitally (appraisal). On 17 February 2026 the finance minister chaired a meeting with the four payment establishments to build an operational framework for moving state financial flows onto mobile money, and pressed for a framework convention (meeting); on 18 February he signed partnership conventions with all four, stated as offering payment and collection services to tax administrations and covering salaries as well as revenue (conventions). No transaction count, salary volume or beneficiary figure under the conventions is published, so the 2023 digital payment rate has no successor.	ADVANCED
Digital Payments and Fintech	Revenue collection	The exclusive electronic state-payment regime slipped to a 1 January 2027 start, and 3,000 payment terminals were delivered with nothing showing one reaching a counter. The regime was set out in the 2026 budget as zero cash and zero paper and has been restated for a 2027 start; the slip is the finding (regime, budget). Three thousand smart terminals were delivered to the finance ministry under the lender operation, and nothing on the record shows a terminal reaching a counter (terminals). A framework agreement on mobile payment of public services was worked on with four operators in February 2026 and nothing since shows it concluded (framework).	STALLED
Digital Payments and Fintech	B2B and B2G functionality	An interoperable payments platform partnership was announced with an international finance institution. The partnership was announced in April 2026 (partnership). No value, scope, timetable or participant list is published. It is the only business-facing payments instrument in this ledger, against three licensed wallets whose usage is unmeasured.	ADVANCED
Digital Payments and Fintech	P2P, P2G and P2B functionality	The regional central bank launched an interoperable payment QR code in July 2026; no Chadian deployment is named. The regional central bank governor launched the interoperable payment QR code at Douala on 29 July 2026, with operations using the regional instruments to be routed through the community switch; it applies to Chad as a member state and no Chadian deployment is named (launch). Domestically the finance ministry's February 2026 conventions with the four mobile-money operators allow public revenue to be paid through their platforms (conventions). The operative law is regional rather than national: the central bank's register names the 2016 payment systems regulation among the instruments in force (register).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digital Payments and Fintech	Population uptake	A second mobile-money operator obtained a payment-institution licence, joining one licensed in 2023 and a multichannel wallet licensed in 2025. The second operator's approval is dated April 2026 on its own filing and July 2026 in the trade press — two dates for one licence (licence, filing). The first operator was licensed as a payment institution in 2023 at year precision, and its launch date is not established (first, launch). A multichannel wallet is in service, licensed in 2025, with no user, agent-network or transaction figure published (wallet). Mobile-money transaction value is held from a central bank measurement for end-2024 (value), which is the only quantity in the payments record and is nearly two years old. 2026-09-04 - the market has more providers and no newer numbers: two further providers have joined the two mobile operators' services, and users report fees they consider high, with competition presented as the hope rather than the position, against 160,000 to 240,000 accounts over 2020 to 2022. No current account count, transaction volume, tariff schedule or regulator series is published.	ADVANCED
Digital Payments and Fintech	Cross-border functionality	The regional central bank acceded to the continental payment and settlement system with member-state banks to connect by end-2026, and a regional interoperable switch published 2025 figures. Accession was announced in July 2026; no Chadian bank is named and the end-2026 target is untested (accession). The regional switch presented annual figures for 2025 at a regional meeting, and no country-disaggregated figure for it exists in this base (switch, merchant). A regional interoperable code standard launched under a monetary union regulation of April 2026; no domestic bank, wallet or merchant deployment is on record, so the country is covered by the regulation rather than shown live (standard).	ADVANCED
Digital Payments and Fintech	Consumer protection	The 2015 consumer protection law covers all transactions in goods, services and technologies and names no payments regulator. The statute, adopted on 12 December 2014 and promulgated as Loi n. 005/PR/2015, fixes the general frame of consumer protection, applies it to all consumption transactions in goods, services and technologies, lists fundamental rights and creates a national consumer council (law). It names no payment or financial-technology regulator, so payments-specific supervision rests on the regional framework the central bank's register sets out (register). No complaint, redress or sanction under the statute involving a payment service is held, eleven years after it was adopted.	NO CHANGE
Registries	Population register	The integrated population and secure-documents system has run since January 2020 and assigns every enrolled resident a unique number. The agency's site names Ordonnance n. 001/PR/2016 as its founding instrument and states that the system, after enrolment and deduplication, assigns every enrolled individual a unique national identification number across 29 centres (agency); its director-general dates the system's launch to January 2020 (memorandum). The register is being extended to populations outside the ordinary enrolment path — the diaspora through embassy postings from September 2025 (diaspora) and Sudanese refugees at Abeche from November (refugees). No cumulative enrolment total or coverage rate is published by the agency.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	Civil register	Digital civil registration was launched with message transfer from registry offices, hospitals, camps and mobile units to the identity agency for validation. The architecture is reported as message transfer from registry offices, hospitals, camps and mobile units to the identity agency for validation (registration, interoperability). A civil-registration application is dated to 2021 by an international official, at year precision from a single sentence, and no source connects it to the programme launched in September 2025 (application). Birth registration within the legal deadline is reported from ministry data for 2024, and three accounts round the undeclared total to 2.948m, 2.95m and 2.958m – three figures for one number (deadline).	ADVANCED
Registries	Address register	There is no national address register; N'Djamena's addressing, officialised in 2016, is still incomplete. The only documented Chadian street-addressing programme ran in the capital from 2013 to 2016 at 700,000 euros co-financed by the European Union, the municipal association and the city, defining addressing as city mapping, street codification, enumeration surveys and a simple information system feeding the local tax base (programme). A 2026 study finds numbering begun in 1990 across the first five arrondissements and officialised in 2016, with the administrative system still incomplete, untouched in the old quarters and in some newly planned ones, so official and popular addressing coexist (study). A National Addressing System instrument exists in no form the base holds, and the 2026 finding rests on a survey of sixty respondents.	NO CHANGE
Registries	Business register	The business register was computerised in February 2020; the one-stop shop's digitalisation was still in technical review in 2026. The regional business-law organisation handed Chad the integrated local-registers and national-file software and equipment for four local sites and the national file on 28 February 2020, World Bank-financed (handover). A technical workshop on 18 February 2026 validated the digitalisation of the one-stop shop for company creation, explicitly a review rather than a deployment (workshop). In August 2026 the commerce ministry restated what the register does not confer: registration alone never authorises a regulated activity, and naming an activity in the statutes or the extract does not replace a licence (communiqué).	ADVANCED
Registries	Social protection register	The unified social registry carries 684,500 households, with a pastoral component of 37,449 across 13 provinces. The registry is described as a centralised, dynamic, spatially aware database interoperable with other systems, carrying 684,500 households under the adaptive social protection strategy for 2025-2030 (registry). Its pastoral component enumerated 37,449 households across 13 provinces and more than 250 pastoral concentration zones, presented in March 2026 with an instruction to extend the survey (mapping). An adaptive safety-nets project financed at 120 million dollars launched at Mao on 3 April 2026, deploying across nine provinces (project).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Registries	Electoral register	8,204,830 electors were registered for the December 2024 polls; a revision owed for June 2026 is unconfirmed. The most recent published national figure is 8,204,830 registered electors for the coupled legislative, provincial and communal elections of 28 and 29 December 2024, 8,173,058 of them inside Chad and 31,772 abroad (figures). Partial legislative and senatorial elections of 20 and 21 June 2026, convoked by decret of 22 May 2026, put the electoral agency under an explicit obligation to revise the register within the deadline; nothing held confirms the revision was carried out (obligation). In June 2026 the permanent political dialogue framework published a roadmap whose second strategic objective runs from a reliable electoral register to equitable party financing (roadmap).	STALLED
Registries	Tax register	The tax platform runs registration, filing and payment online, and protocols now link tax, treasury, customs and the central bank. The tax directorate's platform covers tele-registration, tele-declaration and tele-payment, alongside a mobile application and a normalised electronic invoicing system (platform). A protocol signed on 1 April 2026 with the treasury provides automated real-time exchange of tax issuances, receipts, arrears and payments (protocol), extended on 21 July 2026 to customs and the central bank (extension). No taxpayer count is published on the platform, so the register's size is not established.	ADVANCED
Registries	Land register	The 1967 land law still governs; 261 state reserves were registered in August 2026. The 1967 law is the operative instrument: registration is the procedure by which ownership is established, the titre foncier is the registered title, and custody of deeds and inscription of transfers sit with the conservateur (law); unregistered land is presumed state-owned. An interministerial committee reported 261 state reserves recovered, enumerated and registered in August 2026, the only in-window registration count found, and ordered clearance of the eighty-metre strips and the green belt within three months (committee). A joint arrete of 17 August 2026 instituted a coordination mechanism putting cadastral and technical land data in front of the judges hearing land disputes (mechanism).	ADVANCED
Sectoral management information systems	Health	Electronic medical records and health-facility interconnection reached exploratory meetings, a solar-kiosk telemedicine service reports cumulative usage, and a regional surveillance operation closed. The exploratory meetings took place on a mission of late May 2026 (meetings, mission). The telemedicine service's user and consultation figures are company-reported by the founder, and a plan of 100 kiosks reaching a million people over three years has no progress record (telemedicine). An exploratory meeting and a founder's own figures are the whole of the health digitisation record for this country. 2025-11-30 - the World Bank's implementation completion report closed REDISSE Phase IV, a US\$280m five-country regional disease-surveillance operation carrying a health information and ICT subcomponent at 14% of the sector share and naming DHIS2, IDSR and EWARS among its systems. The held capture is an excerpt: it states no country-specific system, coverage or outcome, so what the operation left behind here is not on the record.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	Education	Ministry statistics and digitalisation staff were trained on an education management information system, at the higher-education ministry only. The training ran over six days in July 2026 (training). The system sits under a school-reform programme financed by an international education partnership and implemented with agency support, and it is reported by that agency rather than by the ministry. It covers the higher-education ministry only, so basic and secondary education have no management information system in this record.	ADVANCED
Sectoral management information systems	Social protection	The unified social registry is the system layer of adaptive social protection, carrying 684,500 households. The registry is described as a centralised, dynamic, spatially aware database interoperable with other systems, carrying 684,500 households under the 2025-2030 strategy (registry). A 120 million dollar adaptive safety-nets project launched at Mao on 3 April 2026 deploys across nine provinces using it (project), and its pastoral component enumerated 37,449 households across 13 provinces (mapping). The link that would make it identity-verified is not made: the accord to identify every entrant by their national identification number was unsigned in March 2026 (meeting).	ADVANCED
Sectoral management information systems	Justice	A digital exchange platform between litigants, lawyers and the courts was presented in October 2025 — the first judicial system the base holds. Under the national strategy for digital transformation of the judicial system, the justice ministry with United Nations development support launched a digital exchange platform between litigants, lawyers and the judicial system, presented on 23 October 2025 (platform). In February 2026 the Supreme Court received laptops, desktops, professional scanners, server-room equipment and network hardware through a European-funded parliamentary and electoral support project (equipment). A February 2026 workshop laid groundwork for interconnecting the courts of first instance with the biometric register (workshop). No case count or court coverage is held.	ADVANCED
Sectoral management information systems	Tax	A standardised electronic invoice is mandatory from the 2026 budget with exclusive use deferred to 2027, and a revenue-administration digitalisation project closed in 2023. The invoice is mandatory from the 2026 budget, with exclusive use as the basis for state payment starting in 2027; no count of invoices issued, taxpayers enrolled or systems connected is published (invoice, orientations). The revenue-administration digitalisation project closed in 2023 at year precision, and its instrument label is the capture's own default and unverified (project). A closed project, a mandatory invoice with no enrolment count and a deferred exclusivity date are the whole of the revenue digitisation record.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Sectoral management information systems	Customs	A freight bureau enrolment platform was presented abroad, and a CEMAC mission assessed transit interoperability with Cameroon's customs platform. The presentation was made in August 2026 (platform). Nothing on file relates it to the transport ministry's own planned platform. For a landlocked country whose freight moves through that port, a platform launched abroad and unconnected to the domestic transport programme is worth recording as the arrangement it is. 2026-04-22 - a Cameroon Customs mission supported by AFRITAC Centre assessed interoperability between Cameroon's CAMCIS and the SYDONIA World platform Chad and the Central African Republic use, and prepared implementation of the CEMAC regional SIGMAT transit-tracking system, with fieldwork of 21 to 30 April 2026; no implementation date, cost or interface specification is published.	ADVANCED
Sectoral management information systems	Land	E-Conservation went into production in October 2023 with the first 5,000 secured deeds; modernisation contracts followed in 2025 and 2026. The computerised domains and land conservation system went into production on 2 October 2023 with the first 5,000 secured land deeds distributed, its four stated objectives running to a reliable database of titles (production). A partnership agreement of 5 December 2025 with a geospatial firm set three priorities – updating the national mapping, modernising the cadastre and developing an urban and land information system – under the national development plan (agreement). A Chad-France protocol signed in Paris in April 2026 covers expertise sharing and technical support in land, mapping and digital transformation, including digitising cadastral archives held in France (protocol).	ADVANCED
Other GovTech and e-Gov	e-government services	The 2027 budget orientations provide for an electronic visa as the sole channel and fully online business creation, and a sovereign data platform produced a biennial delivery report. The base holds no statement on whether an electronic visa operates today, and exclusivity is stated with no fallback channel (visa). Fully online business creation is provided for from 2027, with a continental bank programme separately funding interconnection of business one-stop shops (business, programme). A biennial delivery report on the presidential programme was produced through a sovereign data platform; no custodian, supplier, hosting arrangement or public access to the platform or its data is stated, and the report itself is not held (platform). An integrated transport-services platform was discussed at a ministerial meeting in September 2025 with nothing further on file, its stated scope covering vehicle registration, driving licences, technical inspection, transport licences and permits (transport).	ADVANCED

Digitalisation

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Digitalisation of sub-national government	ICT infrastructure for local government	The 23 provincial chef-lieu communes received FCFA 273 million of IT equipment in May 2026 — the first evidence they have any. The handover of 19 May 2026 under the national digital transformation programme gave the 23 provincial chef-lieu communes 272,964,000 FCFA excluding tax of computing and digital equipment for local electronic services (handover). Four months earlier each of the 23 provincial councils received two computers, two solar kits, two printers, a photocopier and a satellite internet kit, explicitly to extend the public finance management system to the territorial authorities and to secure and trace local budget circuits (equipment). Mayors of two Logone provinces were trained in August 2026 on collecting and transmitting civil-status data to the centre (training).	ADVANCED
Digitalisation of sub-national government	Digitalisation of local government records	A working session addressed interoperability between the biometric system and communal registers in the capital municipality. The session took place in April 2026 (session, support). It is the only local-government item the base holds for this country. No outcome, connected-register count or timetable is published.	ADVANCED
Rural digital data capture	Digitalisation of rural health clinics	96.4 per cent of districts enter health data directly, and a campaign-management platform was scoped in April 2026. The national move to DHIS2 through a 2021 pilot and a November 2022 launch reached 96.4 per cent of districts entering data directly after the first year (system). A joint mission of health and humanitarian bodies met the ministry on 20 April 2026 to put Chad among the beneficiaries of an integrated health-campaign management platform, starting with polio vaccination — planning, field-team tracking and data management being the named workstreams (mission). The clearest rural delivery is the solar telemedicine kiosks the ledger holds separately, and the vaccination micro-planning pilot in Lac, Kanem and Hadjer Lamis (pilot).	ADVANCED
Rural digital data capture	Digitalisation of rural primary schools	School-level collection was on paper as at 2021; decentralisation now covers 12,863 primary schools in 16 provinces. The only document tracing Chad's school-data collection end to end states that as at 2021 collection at school level was on paper, carried up the hierarchy and keyed manually into the central system, with no digital capture at the schools (study). Decentralisation of the system is now effective in 16 provinces across 12,863 primary schools and is to be extended to seven more, through eight academies, 24 provincial delegations, 129 inspectorates and 380 pedagogical sectors, with data still analysed centrally (decentralisation). About 550,000 dollars of computing equipment reached seven provincial delegations and four central directorates on 15 June 2026 (equipment).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Rural digital data capture	Digitalisation of rural registry offices	Tasdjil issues a birth extract with a national identification number in twenty minutes, offline, from hospital sites. The application, built for the identity agency with United Nations support in 2022, works offline and issues an extract carrying a national identification number within twenty minutes; the first office opened in August 2022 and by November 2023 it had reached eighteen sites, against 74 per cent of under-fives unregistered (campaign). Mayors of Logone occidental and Logone oriental were trained in August 2026 on collecting and transmitting civil-status data to the centre, citing the application and interoperability between health facilities and civil-status centres, with under-one registration rising from 21 per cent in 2021 to 28 per cent in 2023 (training).	ADVANCED
Rural digital data capture	Digitalisation of rural police stations	The police data centre created by decret in 2023 was inaugurated in September 2025. Decret n. 2278 of 18 August 2023 created the centre for collecting and recording police data at the public security ministry, charged with managing the national police information system and with collecting, centralising, safeguarding and sharing data (decret). The centre and a forensic-science sub-directorate were inaugurated on 10 September 2025, European-financed under the national arm of a regional police information programme launched in 2016 (inauguration). Nothing states how many police stations feed the system, or whether any outside the capital do, so what is established is a centre and not a network.	ADVANCED

Technology

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	Use of AI in government administration	A director-general for artificial intelligence was created inside the ministry in October 2025 – the first standing state structure for it. The presidential decret of 21 October 2025 creates the directorate-general inside the telecommunications, digital economy and administrative digitalisation ministry and names its director-general (decret). Uptake inside public bodies is training rather than deployment: staff of the public-works school were trained in generative artificial intelligence in April 2026 and recommended a usage charter and a digital cell (training), and the food-security office trained its division heads in August 2026 with no system deployed (training). No artificial-intelligence system is in production in any Chadian administrative process.	ADVANCED
AI	Use of AI in sectoral management information systems	Two health pilots run: AI tuberculosis screening flagged 589 abnormalities in 7,116 screened, and Vacci360 layers over DHIS2. A mobile computer-aided tuberculosis screening strategy screened 7,116 people and took 6,357 X-rays, flagging 589 abnormalities of which 112 were confirmed and all started on treatment, with algorithms tailored to nomadic, internally displaced and refugee groups (screening). Vacci360, launched on 2 April 2026 in Lac, Kanem and Hadjer Lamis, adds an analytical layer over the existing health information system: geographic accessibility, automated micro-plan optimisation, mobility indicators including herd movements, and a conversational assistant for querying the data (pilot). Both are in health and both are partner-run. No other sector's management information system carries an artificial-intelligence component.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
AI	Development of national / regional AI systems	An interdisciplinary AI research laboratory was created inside the national research centre in August 2026 with a national research-plan mandate. Arrete n. 095 of 3 August 2026 creates the laboratory inside the national development research centre with a mandate to draw up a national artificial-intelligence research plan (arrete). It follows the first national artificial-intelligence scientific days held at the same centre from 29 December 2025, with plenaries, thematic round tables and research presentations (scientific days); the centre already carries an artificial-intelligence team spanning health, farming, education and governance (centre). No system built in Chad is held. What exists is a directorate, a laboratory and a research plan not yet written.	ADVANCED
AI	Control of AI abuse		NO EVIDENCE
ICT Industry	National capacity in DT-related production	Privatisation of the state telecommunications operator was re-announced with a 60 per cent stake offered and no advisory bank appointed. The re-announcement was made in February 2025; staff were cut from about 10,000 to under 500 after a sale and subsequent nationalisation, and the account is a named analyst's (privatisation, strategy). No advisory bank has been appointed and no process is on record. A state operator reduced by that much, offered for sale with no adviser, is the industrial capacity this country has.	NO CHANGE
Innovation ecosystem	Technology hubs	A state technology hub was created by arrete in September 2025 and launched on 30 October, covering incubation, laboratories and skills training. The centre was created by arrete of 1 September 2025 issued by the secretary general of the Presidency and publicly launched on 30 October 2025, its remit covering a digital library, incubation of Chadian technology start-ups, research and development laboratories, digital-skills training and the digitalisation of the administration (hub). No tenant list, cohort size or budget figure is published for it. Around it sits the youth entrepreneurship fund launched in July 2020 at 30 billion FCFA with information and communication technology among eligible sectors (fund).	ADVANCED
Innovation ecosystem	Tech startup ecosystem	There is no start-up statute; a youth entrepreneurship fund of 30 billion FCFA lends through banks under a 70 per cent state guarantee. Loi n. 005/PR/MFB/2020 of 26 May 2020 created the fund, launched on 11 July 2020 at 30 billion FCFA, lending entirely through banks under a 70 per cent state guarantee at a target rate of about 6.25 per cent, with information and communication technology among eligible sectors (fund). A state technology hub covering incubation, laboratories and skills training launched on 30 October 2025 (hub), and in December 2025 a challenge programme opened to identify, support and finance projects across all 23 provinces (challenge). No disbursement total, loan count or share going to technology ventures is published for any of them.	ADVANCED

Capacity

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Literacy	Digital literacy (civil service)	The President instructed the national administration school to take digital training into the provinces, against an intake target of 350. At the school's nineteenth intake graduation the President called for an administration resolutely turned towards digital, instructed it to accelerate continuing training and deploy it in the provinces so that territorial cadres benefit, and set an intake target of 350 (address). Delivery is workshop-sized. Credit administrators of local authorities and deconcentrated structures were trained at Koumra on 4 and 5 May 2026 on the public finance system, the tax platform and normalised electronic invoicing (training), and the education ministry's statistics directorate had a six-day workshop at Bongor in July 2026 on the school statistics application (workshop). No assessment or measure of digital skill across the service is published.	ADVANCED
Literacy	Digital literacy (general population)	Fewer than 30 per cent of 15-to-30-year-olds in one project's target areas hold digital skills; no national programme exists. A civil-society project with the education ministry, running from October 2025 to September 2029 across two arrondissements of the capital, Moundou, Dohara, Sarh and Mandoul, records that fewer than 30 per cent of 15-to-30-year-olds in its target areas hold digital skills, and reports around a 75 per cent skills gain across more than 150 young people trained in its pilot (project). The national ICT agency opened free intensive digital-skills sessions at Bongor in January 2026 — computer initiation, office software and internet safety — for an expected hundred beneficiaries, paired with a disinformation-awareness campaign (sessions). The only official population figure is the regulator's: 14.2 per cent using internet services in 2020 (observatory).	ADVANCED
Training and skills	DT-related training in secondary education	The 2006 education law creates no digital curriculum; a TVET digitalisation survey across 57 centres was validated in July 2026. The framework statute, 129 articles and in force, charges technical and vocational secondary education with developing learners' capacity to adapt easily to technological change and sets the structure of the general and technical streams; it creates no digital curriculum and no computing baccalaureate stream (law). On 10 July 2026 the ministry validated by consensus a field-survey report on the state of digitalisation in technical and vocational education, drawn from more than 200 actors across 57 training centres, a first step towards a 2026-2030 strategy (survey). The most concrete delivery is one school: around forty teachers at the capital's industrial technical lycee trained in artificial-intelligence fundamentals on 13 February 2026 (training).	ADVANCED
Training and skills	DT-related university facilities and qualifications	The national ICT school, created by ordinance in 2015, graduated 121 in its fifth promotion in December 2025. The school is a public establishment for higher education, research and innovation in electronic communications, created by Ordonnance n. 005/PR/2015 of 2 March 2015 with legal personality and financial autonomy, seated in the capital under the posts and new information technologies ministry (school). It graduated 121 laureates of its fifth promotion on 17 December 2025, at a ceremony presided over by the telecommunications minister (graduation), and received 30 desktop and 15 laptop computers from the national ICT agency on 14 July 2026 for its laboratories, teaching, research and administration (equipment). No breakdown of the 121 by programme is published.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Training and skills	Graduates entering DT ecosystem	A two-day session for 120 young people on digital tools and financial inclusion, and a youth digital innovation and employment programme launched at a maker space. The two-day session was a single cohort rather than a standing programme, delivered under a continental bank microfinance grant (session). The innovation and employment programme was launched with the national employment office and a francophone body in April 2026, and no budget figure is stated (programme). Two cohorts and a launch are the entire training record for a country of this size, against a national connectivity strategy whose planned investment is recorded elsewhere in this report.	ADVANCED
Research institutions	Think tanks and academic departments contributing to DT policy	The national research centre carries an AI team and gained a dedicated research laboratory in August 2026. The centre was created by restructuring and renaming an earlier research support body under arrete of 3 September 2015, is a scientific and technical establishment with legal personality and management autonomy, and carries an artificial-intelligence team spanning health, farming, education and governance (centre). The first national artificial-intelligence scientific days were held there from 29 December 2025, opened by two ministers, with plenaries, thematic round tables and research presentations (scientific days). Arrete n. 095 of 3 August 2026 created an interdisciplinary artificial-intelligence research laboratory inside it with a mandate to draw up a national research plan (laboratory).	ADVANCED

Inclusion

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	Citizen feedback portals	The ombudsman launched a trilingual complaints website with case tracking in February 2026, beside the Presidency's own form. The only standing channel the base held was the Presidency's online suggestions form, addressed to the civil cabinet and resting on no enacting law or decree (form). On 27 February 2026 the ombudsman launched a website taking citizen complaints online with case tracking, in French, English and Arabic; no case volume, budget or enabling instrument is stated (website). The commitment behind them is the government's general policy declaration, which undertakes to put the citizen at the centre of law and policy making through digital innovation (declaration).	ADVANCED
Access to services	Citizen participation in policy	The data governance strategy consultations of May 2026 convened ministries, parliament, regulators, private sector, academia and civil society. Chad is developing a national data governance strategy through stakeholder consultations held from 13 to 15 May 2026 and a validation workshop on 21 May, convening ministries, the National Assembly, regulators, the private sector, academia and civil society, with stated attention to women, youth and people with disabilities; the same record puts Chad's data-governance maturity self-assessment at 30.27 per cent (consultations). The government's general policy declaration commits to an inclusive law- and policy-making mechanism and a citizen oversight mechanism through digital innovation (declaration). Neither mechanism is established, and the consultations are the strategy's own process rather than a standing channel.	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Access to services	Gender equity	The only quantified gender commitment is a project target of at least 25,000 women and girls trained. The digital transformation project financed at 92.2 million dollars targets about 40,000 direct digital-training beneficiaries including at least 25,000 women and girls and 2,000 people with disabilities, alongside broadband access for over four and a half million rural people (project). No sex-disaggregated figure for internet use, mobile ownership or ICT employment in Chad is held, and nothing reports progress against the target. What can be established is what was promised, not what has been delivered.	NO CHANGE
Access to services	Inclusion of persons with disabilities	400 disabled traders were enrolled with an identity-linked QR document in July 2026, free of charge. From 27 July 2026 the social action ministry and the identity agency began enrolling 400 people with disabilities — 115 visual, 285 physical — trading on the road between the capital and the Cameroonian border, issuing free of charge a secure document tied to the national identification number with a QR code for authentication by customs and police, plus a badge and vest (enrolment). In May 2026 a three-month vocational programme for people with disabilities in the capital carried an informatics module among three (programme). The standing commitment is a project target of 2,000 people with disabilities among 40,000 training beneficiaries (project). No accessibility standard applies to any Chadian digital service.	ADVANCED
Access to services	Inclusion of refugees and IDPs	A memorandum on secure identity for vulnerable populations was signed with a migration organisation, and more than 4,000 refugee identity numbers have been issued in a pilot. The memorandum was signed in May 2026 (memorandum). The refugee pilot is lender-funded with the refugee agency and the national refugee commission, on a French supplier's technology (pilot, identities). A refugee digital learning centre was inaugurated at a one-stop shop in the east with Italian funding, and no cohort numbers are held at either end (centre). Biometric enrolment of displaced people, again with no protection statute behind it, is the largest inclusion activity in this ledger.	ADVANCED
Digital divides	Bridging of digital divides	The regulator's fifteenth audit measures coverage province by province, and phase one of the backbone reached Sarh in December 2025. The fifteenth national mobile quality-of-service audit was in the field in October 2025, measuring coverage province by province rather than nationally: 94 points in Hadjer-Lamis, Lac and Kanem with coverage on twelve strategic road axes, continuing into Barh el Gazal and Borkou, and 20 points in Chari-Baguirmi and Mayo Kebbi Est (audit). Phase one of the state digital infrastructure modernisation project was provisionally accepted at Sarh in December 2025, inaugurating the Iriba-Doba fibre line with a live telephony test connecting provincial governorates, on a project launched in July 2020 at 175,106,916 euros; flood-vulnerable sections were flagged at acceptance. No rural-urban split of household internet access is published.	ADVANCED

Data

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
National statistics	National strategy for development of statistics	The 2021-2025 statistics strategy runs out this year, with 105 million dollars financing the system. The strategy was adopted by decret of 14 October 2021, and 126 of 234 sustainable development indicators had a published baseline at the 2024 assessment (assessment). The World Bank is financing the national statistical system at 105 million dollars, more than a third of it for the third population and housing census and for human resources, with 78 bursaries to regional statistics schools granted (financing). The institute trained 90 national and regional journalists over three days in November 2025 on the statistical system and the census (training). No successor strategy is held.	ADVANCED
National statistics	Censuses and surveys	A decree extended the main census enumeration to 6 August 2026, and days from the close one nomadic district had still not seen an enumerator. The extension decree was issued on 20 July 2026 (extension). Neither census decree is held: the country has no reachable online gazette and the statistics institute's site has no address record. Days from the close, one nomadic district had still not seen an enumerator (nomads). A statistical development project closed in 2022 at year precision, on the same unverified instrument label as the revenue project (project).	ADVANCED
National statistics	Statistics from administrative data	The education ministry validated its 2024-2025 school statistical yearbook from administrative returns in October 2025. The ministry's planning and school-mapping directorate held a validation workshop for the 2024-2025 school statistical yearbook in the capital on 7 October 2025, with provincial education delegates present — the clearest located instance of administrative returns becoming national statistics (workshop). The assessment records 126 of 234 sustainable development indicators with a published baseline (assessment). The institute publishes through five named channels under the 2019 statistics law, on terms that bar redistribution of microdata without written agreement (policy).	ADVANCED
Open data	Use of open data	The digital Journal Officiel opens 68 years of legal texts, while microdata may not be redistributed without written consent. The platform launched on 14 May 2026 gives free centralised online access to laws, decrees, regulatory texts and public procurement notices back to 1958, carried by the government's general secretariat with United Nations technical support and European Union funding (platform). The statistics institute's archive bars users from copying or transmitting microdata to anyone without prior written agreement, requires a prescribed source line and two copies of any report produced (policy) — so the material is published and not open. A water geoportal, a mobile data-collection application and finalised hydrogeological maps were presented at an open day on 24 June 2026 (geoportal).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
Use of satellite data	Agricultural use of satellite data	Satellite crop monitoring puts the 2025 cereal harvest 9 per cent above average; the national space roadmap has no date or budget. The country brief was prepared using satellite crop monitoring alongside a cereal balance sheet, food-price monitoring and the regional food-security framework, and puts the 2025 cereal harvest 9 per cent above average (brief). The national space agency published a two-pillar roadmap naming an observation microsatellite whose stated priorities are agriculture, climate, water management and disaster prevention with direct help to farmers, herders and local authorities, and a longer-term national constellation; neither carries a date, budget or decret (roadmap). The operating capability is foreign and the national capability is an intention.	ADVANCED
Use of satellite data	Meteorological use of satellite data	A space cooperation protocol was signed with a national space agency at the capital. The protocol was signed in early 2026 (protocol, cooperation). It is the only earth-observation item the base holds for this country. No data source, application, value or timetable is stated.	ADVANCED

Geopolitics

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
US / hyperscaler activities	USA / hyperscaler MoUs, engagements and commitments	A United States digital work programme reached a mission and a readiness to support with nothing signed, and the minister flagged visa refusals for technical personnel as a delivery risk. A mission was held in May 2026 and readiness to support was conveyed at the end of June, with nothing signed; the two accounts give different mission dates (programme, partnerships, cooperation). The minister flagged United States visa refusals for Chadian technical personnel as a delivery risk, which is a rare instance of a government naming the counterparty's own policy as the obstacle to a partnership with it. Cybersecurity cooperation with the United States infrastructure security agency reached a videoconference after attendance at a Washington summit, with no instrument on file (cyber).	ADVANCED
China activities	Chinese MoUs, engagements and commitments	Two Chinese grant agreements were signed in August 2026 with no project list or digital allocation published, and a Chinese vendor is contractor for the national data centre and the backbone. The grant agreements were signed on 20 August 2026; the local-currency equivalents in circulation differ between outlets on their own conversion dates, and no project list or digital allocation is published (grants, agreements, financing). The vendor has been contractor for the national data centre and the backbone with a supervising engineer, and December 2025 coverage frames it as a prospective partner when it had been the incumbent contractor for five years (contractor, finalisation). Technology and artificial-intelligence scholarships were announced at a ministerial audience with no value, selection route, timetable or host institution stated (scholarships), and a fifth-generation platform request to the same supplier has no decision, funding or delivery on record (request).	ADVANCED

TOPIC	INDICATOR	DEVELOPMENTS	PROGRESS
EU activities	EU MoUs, engagements and commitments	European money built the digital Journal Officiel and the police data centre; no regulatory alignment instrument exists. The European Investment Bank financed three feasibility studies in December 2020 on high-speed broadband, improved telecommunications and connectivity for remote rural communities, described by the Bank as its first targeted digital cooperation with Chad (studies). What has since been delivered is state machinery: the Journal Officiel platform launched in May 2026 on European funding with United Nations technical support (platform); the police data centre and forensic-science unit inaugurated in September 2025 under a European-financed regional police programme (centre); and computing and archiving equipment to the Supreme Court in February 2026 (equipment). No adequacy process, data-protection convergence or digital-trade chapter is held.	ADVANCED
Gulf/UAE activities	Gulf MoUs, engagements and commitments	A cybersecurity memorandum was signed with the Emirates in October 2023; a 2025 forum pledged 20.5 billion dollars to the national plan. The one Gulf instrument whose defined subject is digital is a memorandum on cybersecurity, cybercrime and international cyber cooperation signed on the margins of Regional Cybersecurity Week in Abu Dhabi in October 2023 by the telecommunications minister (memorandum). At the close of the Emirates-Chad trade and investment forum in Abu Dhabi on 10 and 11 November 2025 Chad announced 20.5 billion dollars secured against its five-year plan, 4.1 billion from forty private companies and 16.4 billion in donor pledges (forum). In January 2026 the President promulgated the law ratifying an Emirates-Chad investment protection agreement (promulgation). The pledged sums are multisectoral and no digital project under them is held.	ADVANCED
India activities	India MoUs, engagements and commitments	An Indian digital partnership reached a ministerial meeting at which a memorandum was intended and no timeline was announced. The scope asked for was training of Chadian engineers in artificial intelligence, support to the national information technology school, and digitalisation of postal services including a postal bank (partnership, meeting). No memorandum was signed and no timeline was announced. What the country asked for is on the record and what it received is not.	NO CHANGE

Where the record is thin

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
National radio frequency plan and spectrum allocation table	The regulator's published national frequency allocation table, or the order approving it, which would settle what spectrum is assigned to whom and at what price	not yet probed
5G spectrum award or licensing plan	A regulator licence award, a tender notice or a ministerial statement of policy; the base holds only a 2024 international statement that no such network exists and a 2024 ministerial request to a supplier for a platform for the state operator	not yet probed
Universal service fund	The decree or law creating a universal-service fund and its annual accounts, or a ministerial statement that none exists; the base holds no Chad-specific statement either way	not yet probed
Fibre kilometres laid and masts erected under the connectivity programme	A programme progress report or ministry reception minute stating delivery against the 1,200 km and 200-mast targets; the only delivery-side number in the base is the 1,275 km cited in an ultimatum, which no source reconciles with the target	not yet probed
Exchange-point peering traffic volume	The exchange point's own annual report or a digital agency statement of aggregate exchanged traffic; the first-year assembly published none	not yet probed

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Retail price of internet access	A regulator tariff observatory or operator price schedule; only the satellite operator's July 2025 grid is held, and no mobile data price for Chad exists at any date	not yet probed
Wholesale international capacity price	A transit contract with the neighbouring incumbent, or that incumbent's published wholesale price list; a named analyst asserts it is a large share of the retail price without giving a figure	not yet probed
National computer emergency response team	The establishing instrument or a security-agency statement naming an operational incident-response team; the agency's reform ordinance is described in trade press without one and its text is not held	not yet probed
Electricity access rate and grid reliability	A national utility annual report, the results framework of the regional electricity access operation, or published access data; the subject carries one source in the whole base	not yet probed
Power arrangements for the data centre and telecom sites	A site-power specification for the national data centre, or an operator statement of diesel and solar site counts and autonomy hours; the ministry's own June 2026 exchange shows fuel supply is the operative constraint and no numbers exist	not yet probed
Information technology workforce and regulator technical staffing	A digital agency or regulator staffing statement, or the national digital skills plan under the connectivity strategy; the subject carries a single source, a police equipment donation	not yet probed
National identification enrolment total and coverage rate	An identity agency annual report or a published enrolment dashboard; the intersection page states plainly that no source in the base reports the register's enrolment total, and the system's 2020 deduplication capacity is a specification rather than a coverage figure	not yet probed
Data-protection authority overseeing the biometric register	The founding decree of a data-protection authority, or the security-agency reform ordinance confirming where supervision now sits; the reform folds data protection into the cyber agency with no standalone authority	not yet probed
National statistics institute data publication	Any dated statistical release from the national statistics institute; its site is unreachable from the wiki's network, so no national statistical output can be retrieved	not yet probed
Census results	The preliminary results release, the published methodology, or a post-enumeration survey plan; the base holds how the count was conducted and nothing about its output	not yet probed
National health management information system	A health ministry statement or a national health-information implementation report; the base holds only exploratory talks with foreign suppliers and a private telehealth kiosk operator	not yet probed
National interoperability and data-exchange layer	The budget-framing text itself, or a digital or security agency technical specification naming the platform through which the mandated ministry interconnection is to run; the base holds the prohibition and no named exchange	not yet probed
National citizen electronic-services portal	A government portal address with a published service catalogue, or a digital agency statement of how many services are live online; the base records partially digitised procedures and nothing more concrete	not yet probed
Cadastre, state property and land registry platforms	A finance or land-administration ministry statement, or an implementation report from either modernisation programme, saying whether these platforms exist and operate; they are named in the 2027 orientations as things to interconnect	not yet probed
National business register and one-stop shop	The founding text or annual report of Chad's business one-stop shops, or an investment agency statement; a continental bank programme funds their modernisation and interconnection, which implies they exist, but the base holds no dated position	not yet probed
Rural connectivity programme for the unserved localities	A regulator or digital agency universal-service report giving the fund's balance and disbursements; the base holds about 500 unserved localities as a stated challenge with no financing instrument attached	not yet probed
Local-government digital services beyond the capital	A territorial administration ministry statement on communal digital services, or an identity agency list of municipalities connected to the biometric system; only the capital's civil-registry interoperability work is on file	not yet probed
Cybercrime law	The gazetted text with its number and promulgation date; the media regulator names it as the operative instrument for platform offences, so without it the wiki cannot say what conduct is criminalised or by whom it is enforced	not yet probed
Founding instrument and mandate of the media regulator	The organic law or decree establishing the authority and defining its competences, which would show whether its disclaimer of jurisdiction over digital platforms is a reading of its statute or a policy choice	not yet probed
Founding instrument of the telecommunications regulator	The statute or decree creating the regulator, with its independence guarantees, budget basis and sanction powers, plus a register of sanctions actually imposed	not yet probed

SYSTEM OR INSTRUMENT	WHAT WOULD SETTLE IT	LAST PROBED
Open government data portal or policy	Any national open-data policy, decree or portal address; the base holds no Chadian source on this subject, so the absence is currently inferred from silence rather than established	not yet probed
Access-to-information statute	The text of any Chadian access-to-information statute, or an authoritative statement that none exists	not yet probed
Budget-framing instrument for 2027	The ministry's own circular, which would date the orientations and allow provisions to be quoted at article level; the ministry site returned a server error at the last attempt	not yet probed
European digital-governance or regulatory-alignment instrument	Any partnership, cooperation or programme document touching data governance or digital regulation; the four sources the base holds on this subject are training, data-centre financing and refugee identity projects, none carrying a governance instrument	not yet probed
National artificial-intelligence strategy or policy	A published national strategy or a Council of Ministers communique adopting one; nothing in the base suggests drafting has begun, so the finding may be that none exists	not yet probed
Deployed or piloted artificial-intelligence system	A digital agency or ministry procurement notice, or a security-agency register of systems under its new classification of entities of vital digital importance; no Chad-placed source describes a deployment	not yet probed
The national higher school of information and communication technologies	The school's own institutional statement, enrolment figures or the ministry decree establishing it; it appears in the base only as a body India was asked to support	not yet probed
Gulf-state digital cooperation	A signed memorandum, a joint communique, or any single dated Chad-Gulf digital event; the base has only mentions inside two lists of partners and no source at all on this subject	not yet probed
Start-up statute, innovation fund or state innovation instrument	A Chadian start-up law, a national innovation fund decree, or an employment or digital agency programme document that is not donor-financed; every innovation item in the base is donor-scaffolded	not yet probed
Per-operator mobile market shares and subscriber bases	A regulator annual market observatory, or operator segment disclosure for Chad; the base carries only a ministerial aggregate of beyond 13 million subscribers and no split	not yet probed
Official sector statistics	A regulator annual report or national accounts series giving the sector's contribution to gross domestic product, against which the assertion of 1.9 per cent could be checked; every sector figure in the base is trade press or ministerial statement	not yet probed
The 2019 framework agreement and the concessional loan agreement	The gazetted ratification instrument of August 2019 and the loan contract; without them the EUR 175.1m, US\$180m and FCFA 111.4bn figures cannot be reconciled to a document	not yet probed
Domestic appropriation for digital technology	The finance law and the 2027 framing circular, or any ministry budget annex showing a digital line; the base carries no Chadian budget figure for digital at all and the compiled budget outputs hold no Chad file	not yet probed
Universal service fund	The decree or article establishing a universal-service fund, or a regulator annual report confirming its absence, plus any levy rate and disbursement record	not yet probed
National digital literacy programme	The component document or results framework of the transformation project naming the financial and digital literacy programmes it promises, with target numbers and a start date	not yet probed
Rural and urban split of internet access	A regulator market observatory, the census household module on information technology ownership, or an international country profile with disaggregated access; the census now in the field is the obvious candidate	not yet probed
Cost of connectivity	A regulator tariff observatory or an affordability basket for Chad; the base holds only the satellite operator's own price card	not yet probed
Statutory regime for artificial intelligence	An AI statute, regulation or liability regime, or a national AI strategy adopted rather than diagnosed — UNESCO states in June 2026 that none exists.	2026-09-06
National address register	A national addressing instrument or register beyond N'Djamena's own programme, or a coverage figure for the capital's system, which a 2026 study finds still incomplete ten years after it was officialised.	2026-09-06

ABOUT THIS DOCUMENT

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
