

MONTHLY UPDATE

Data Exchange: monthly update, August 2026

Edition of 2026-09-08 · compiled by Claude Opus from the documents in the Corpus repository

43 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.

ALGERIA · ANGOLA · BENIN · BURKINA FASO · CAMEROON · CHAD · CONGO · COTE D'IVOIRE · DJIBOUTI · DR CONGO · EGYPT · EQUATORIAL GUINEA · ETHIOPIA · GABON · GAMBIA · GHANA · GUINEA · GUINEA-BISSAU · KENYA · LESOTHO · LIBERIA · LIBYA · MADAGASCAR · MALAWI · MALI · MOROCCO · MOZAMBIQUE · NIGER · NIGERIA · RWANDA · SENEGAL · SEYCHELLES · SIERRA LEONE · SOMALIA · SOUTH AFRICA · SOUTH SUDAN · SUDAN · TANZANIA · TOGO · TUNISIA · UGANDA · ZAMBIA · ZIMBABWE

The place reports do not share one window; the period above is the range they span.

Algeria

Interconnection acquired a deadline before it acquired its rules. A think tank's first digital brief records that the [president gave the sectors one month from 12 July to interconnect through the national data centre](#), and nothing has been reported against that date. The two referentiels the interoperability decree makes the obligations wait on are still untraced, so the instrument that would carry the interconnection remains unenforceable while the timetable for it has already run.

One exchange did begin. The customs single electronic window [entered a phased rollout under a customs circular of 13 August, towards import and export without paper documents](#). The circular's text is not held, and no phase list, participating agencies or completion date is published.

A second unified path was proposed on 3 September. A working meeting at the digitalisation commission, chaired with the internal trade minister and attended by officials of the interior, transport, agriculture and fisheries ministries, was [devoted to a unified digital mechanism for regulating the national market and a national system for tracking strategic goods, unifying the data path between the sectors that supply and distribute widely consumed goods](#). The record is a joint communique of one meeting: no instrument, budget, operator, architecture or delivery date is stated, and nothing names the goods in scope.

Angola

The public-administration digital infrastructure contract [entered execution on 31 July](#), the point at which a signed instrument becomes a build. No component list, milestone schedule or completion date accompanies the start.

Benin

The exchange [recorded more than 138 million requests in total](#), 32.7m in the preceding thirty days, across 73 members, 176 information systems and 512 services.

A second kind of data exchange entered the record in August, and it is regional rather than national. The BIC-UEMOA credit information bureau held its first Cotonou data forum on 23 July, [reported on 13 August](#), with the finance ministry framing data quality as the route to cutting credit-approval turnaround to 48 hours. The bureau spans all eight union states with 321 data providers, about 48 million contracts and more than 20 million active borrowers. The figures are the operator's own and union-wide; nothing Benin-specific — coverage, dispute rate or the data-protection basis for the file — is held.

Burkina Faso

Two states that share a river proposed sharing the data that would stop it drowning people. Burkinabe and Ghanaian officials [proposed a formal reservoir release protocol built on real-time data sharing and pre-agreed spill thresholds, and heard the Burkinabe power utility's chief hydrologist disclose that letters seeking closer coordination with the Ghanaian river authority, sent as far back as October 2025, had gone unanswered](#). Working groups mapped why warnings fail on the shared river: messages move too slowly, district assemblies lack transport and fuel, agencies holding forecast data do not always talk to disaster responders, and repeated false alarms have bred complacency. The proposal is a research project's rather than either government's, and nothing is signed.

Cameroon

On 29 July a joint communiqué [established a trilateral customs steering committee with Nigeria and Benin](#), committing to harmonised procedures, digital interoperability and coordinated risk management on two named corridors, with no timeline, budget or system specification published. At home the layer that would carry any of this acquired an owner rather than a design: at the opening of the national internet governance forum on 18 August the posts and telecommunications ministry [tasked the state operator CAMTEL with carrying national data and infrastructure interoperability](#), resting the mandate on its backbone, transmission, access and hosting infrastructure. No instrument, timetable or budget accompanies it.

The minister responsible for decentralisation and local development said on 25 August 2026 that the administration [has built digital islands side by side and that these must end](#) — a ministerial commitment rather than a platform. The same problem framed the national Internet Governance Forum in Yaounde a week earlier.

Chad

The 2027 budget orientations [prohibit any ministry putting in place a computer system incompatible with the existing platforms](#), and require tax, customs, treasury, budget, accounting, cadastre, identity, state property and land registry to interconnect on a single identifier. It is the strongest interoperability commitment this ledger carries, and the base holds none of the framing text: no cost, phasing or implementing agency is named.

Congo

One exchange went into use, in the narrow place where the state examines itself. The national transparency commission [opened the second round of its public-finance transparency-code evaluation entirely online, covering budget years 2023 to 2025](#), focal-point training having completed in Brazzaville beforehand. No supplier, custodian or results-publication date is stated, and the platform is not publicly accessible on the record held.

The larger exchange was contracted out. Customs-procedure digitalisation under the continental free-trade agreement [was awarded to a Nigerian firm on a 20-year concession valued at US\\$3.1bn, signed at Abuja](#). No revenue share, data-ownership term or exit provision is published for a twenty-year hold over the state's customs data.

Cote d'Ivoire

The minister told an information-systems seminar on 21 and 22 July that the first services onto the interoperability platform [had been chosen largely by volunteering rather than against user priorities](#), against targets of 100 services online by end-2026 and 700 within three years. No count of services in production has been published. Fourteen migration bodies met on 30 July to [co-design a single collection and profiling tool for returning migrants](#) and a roadmap for transferring their data into one directorate; no legal basis, data-protection safeguard or timetable for pooling personal data across fourteen bodies is stated.

The country's largest working data exchange is agricultural, and its pilot met its users in August. Producers at Meagui [pressed the coffee and cocoa board on 11 August over rollout gaps in the national cocoa traceability system](#) — the conditions attached to the producer card, collection in remote zones, deceased and expired cardholders, and bank fees tied to the card. The regional delegate said pilot-phase issues are feeding refinements. No enrolment count, coverage figure, data-controller arrangement or fee schedule for the card is held. The board for the cashew sector began the same sequence a step earlier, [launching a producer and plantation census at Korhogo on 11 August](#) as the database that any producer card or traceability system would have to stand on; no timetable or budget for it is stated. Across the border, Mali's customs administration told a Bamako roundtable that its [interconnection with Ivorian customs has a transit-goods data pilot running](#); the account is Mali's, no Ivorian statement is held, and no completion date for the full interconnection is given.

Djibouti

Customs has begun preparing to put trade procedures on one platform. The administration [set out an electronic single-window project at a preparatory workshop on 1 September, saying it goes beyond strengthening the declaration system customs currently uses and would shorten processing times, increase transparency and make operations more predictable for traders](#), working with the commerce ministry, the continental free trade secretariat and a Korean agency that has done the same in three other African countries. No design, budget, procurement or timetable is published, and no baseline clearance time exists to measure the shortening against.

DR Congo

The exchange being built is between revenue agencies rather than between citizens and the state. The finance inspectorate [disseminated a three-year strategic plan to public administrations, with data cross-checking between revenue agencies under systemic control](#). No platform, data-sharing instrument or protection arrangement for the cross-checked records is named.

Egypt

The 19 July cabinet meeting produced the window's substantive disclosure: 105 government bodies connected and 100 national databases linked through the government digital switch, with the digital treasury's operating model applied to a number of services and e-signature and e-seal live and integrated with digital identity ([cabinet readout](#)). No register of the connected bodies, lawful basis or audit arrangement accompanies the figures.

Equatorial Guinea

The national interoperability framework the World Bank named as absent in 2024 is still absent, and August put a cost on that. At the National Development Agency's directorship handover on 7 August, its outgoing Inspector General [named limited data-sharing by line ministries as the agency's main obstacle](#) to monitoring delivery against the National Sustainable Development Strategy. The agency is the body meant to see across government, and it is describing itself as unable to.

Ethiopia

A delegation joined the [UNDP Africa Accelerator for Digital Public Infrastructure's session of 2-3 September](#) alongside Malawi, Rwanda, Sierra Leone and Zambia, on moving digital public infrastructure blueprints to execution, verifiable credentials and consented data sharing, and reusable open-source deployment code. Attendance and a [published agenda](#) are the whole of what is established; nothing on the record commits the country to a programme.

Gabon

The regional interoperable QR-code standard was launched at Douala on 29 July 2026 under the monetary union regulation of 8 April 2026, in force across all six member states and settled through the regional switch, with the Gabonese scheme as its pilot ([launch](#)). The switch's 2025 figures, presented the following day, were 20.3m transactions worth FCFA 863bn across 153 participants ([figures](#)). On 9 July the central bank acceded to the pan-African payment and settlement system, with member-state banks to be connected by the end of 2026 ([announcement](#)).

A different kind of exchange went live in August. The airport-security committee [moved its advance passenger information and passenger-name-record system into its operational phase on 14 August](#), naming Royal Air Maroc lead carrier for IATA-code implementation under the state's convention with SECURIPORT, with border risk-screening the stated purpose. The convention terms, the retention rule for passenger data and any authorisation by the data-protection authority are not held — and the country's biometric-processing prohibition, with the defect already recorded in its derogation, sits alongside it unremarked.

The private half of the health system was brought into a standing channel for the first time. The health ministry [instituted quarterly consultations with the association of private health establishments, the agenda naming the transmission of health data from private clinics among its items](#). No data standard, transmission route, reporting obligation or first meeting date is published, and the base holds no measure of what share of care the private sector accounts for — so the channel exists and what will flow through it does not.

Gambia

The first register link to be agreed is between education and health rather than between the registers the interoperability indicator counts. A [memorandum connects the education and health information systems to flag vulnerable children and verify enrolment](#). It is a memorandum rather than a live interface, and the project's own indicator for register interoperability still stands at zero.

Ghana

Interoperable mobile-money transfers ran to [33.5 million transactions worth GH¢6.2bn in June](#) — about 1.3% of total mobile-money value. The share, not the volume, is the measure of interoperability, and it is the figure that has stayed small since the service went live in 2018.

Guinea

On 24 July, ONECI [signed a memorandum with NG Tech Innovation for a national interoperability and identity-verification platform over the RNPP](#), under the Dama Djigui programme, before the elections director-general and Conakry's mayors. No value, duration or scope was disclosed and the text is not public.

A second exchange was constituted in August, in the one domain where the state has a reason to move data between four ministries at once. The [national One Health platform's steering committee was activated on 14 August, with the health, higher education, environment and livestock ministries signing a protocol agreement](#) for shared data, joint epidemiological surveillance and coordinated response to zoonotic and environmental risk. No platform build, data-sharing rule, custodian or protection standard for the shared health and animal data is stated — which is the shape a [published commentary the same week](#) argues runs through the whole estate: sectoral platforms in health, policing and civil registry still siloed a decade after the 2016 cybersecurity and data-protection law and more than a year after the April 2025 decree creating the unique identifier, with no independent, operational data-protection authority and no sovereignty over hosting or system audits.

Guinea-Bissau

The government [approved a national interoperability regulation](#), announced on 8 August 2026 by the World Bank-backed Western Africa Regional Digital Integration Program, which supports the work and presents the framework as Guinea-Bissau's contribution to the regional programme. A draft decree on the interoperability of public and private digital systems had been approved by the Council of Ministers on 10 July 2025 and had not moved since; the announcement names no decree number, no gazettal and no entry-into-force date, and the paired data-governance and cybersecurity decrees approved alongside it in 2025 remain where they were.

Kenya

The health ministry issued tender addenda on 27 July 2026 that [make financial, tax, insurance, pension, payroll, laboratory and identity interfaces day-one mandatory](#) for a national public-health enterprise system, and require primary hosting inside an approved Kenyan government or health-sector environment.

The Treasury is building the other kind of exchange — one that looks at the money coming in. It is [rolling out a Development Partners Management Information System, expected to launch before the end of 2026](#), to consolidate data on development-partner commitments, disbursements and funded programmes for planning and oversight. No supplier, cost, or statement of whether the consolidated data will be published is reported.

The regional payments interlink took another participant: a commercial bank group [went live on the pan-African system on 11 August, adding its branch network to instant cross-border transfers in local currencies](#).

Lesotho

Lesotho [launched its National Single Window at Victory Hall in Maseru on 24 August 2026](#), under a World Bank-financed competitiveness and financial-inclusion project. No agency coverage, transaction volume or phasing is stated.

Liberia

The special economic zone authority said a [trade information portal could ease doing business](#). Nothing is commissioned, and no scope, funder or date accompanies the case for it.

Libya

Customs and the chambers of commerce [discussed strengthening digital cooperation on 20 August](#). Discussion is where this row stands: no protocol, data-sharing arrangement, system or date follows from it on the record.

Madagascar

The health platform took a step the interoperability layer above it has not yet matched. The World Health Organization's quarterly bulletin, published in August, [records a June workshop launching the DHIS2 Tracker pilot for individual vaccination records across 20 public health centres and 54 private vaccination sites in one district of the capital](#), ahead of a planned national scale-up. Individual-record tracking is what makes a health system's data joinable to an identity system; the national exchange platform launched in April, and no integration between the two is recorded.

Malawi

On 5 August the revenue authority signed an arrangement with its South African counterpart for real-time customs data exchange, with no go-live date and no published purpose-limitation, retention or reciprocity terms ([signing account](#)).

Two days later the South African side notified the update from its end, [publishing the arrangement for automatic exchange of customs information together with a draft rule amendment](#). The rule is still in draft and the go-live date is still unstated.

Mali

The national public key infrastructure and electronic signature services were [recommended for effective deployment at the digital week on 1 August](#). Nothing names a first service, an operator or a date.

Customs is the one exchange with a build behind it. At a Bamako round table on 7 August convened by the Prime Minister's office and the chamber of commerce with private operators, the customs directorate [presented a project to interconnect customs information systems for goods in transit](#), aimed at cutting customs, transit and import-export processing times and building on a World Bank technical mission of 31 July. [Mali's implementation of the WTO Trade Facilitation Agreement was put at 83.6%](#) at the same consultation. No counterpart administration, timetable, cost or system name is stated.

Morocco

A national water digital twin was described publicly on 28 July, to rest on a sovereign national data platform hosted in Morocco and fuse sensor networks, satellite observation and data from the basin agencies, the planning commission and engineering consultancies. The project lead put a first pilot 18 to 24 months away and gave no cost, budget line or procurement route ([project account](#)).

A platform already carrying national data went under inspection instead. The health ministry [put its national health-data platform through a security and performance audit running from July to September, covering infrastructure, application, database and cybersecurity on a 170,000 dirham budget](#), with no cyberattack or breach cited as the trigger. No findings are published.

Morocco [promulgated the OECD multilateral competent authority agreement on the exchange of country-by-country reports by dahir 1.26.72 of 28 July 2026](#), ending seven years of parliamentary blockage since signature. The first exchange partners and the start date are not on file.

Mozambique

The roads fund runs an [open-data portal publishing road, bridge and infrastructure project data under a Creative Commons licence and the open contracting standard for infrastructure](#), validated as a publisher against that standard in 2026. It is the base's clearest instance of Mozambican government data published to an external standard rather than to a page.

A physical exchange broke ground alongside it. Works on the [Ressano Garcia one-stop border post began on 17 August at a stated 980 million meticaïs](#). No completion date, systems specification or customs-integration arrangement is published.

Niger

Health data began moving between systems on its own. A national interoperability layer [is reported exchanging data automatically between three digital health platforms and the national health information system](#), the first such integration against the 32 or more largely separate platforms the country held in 2023. The e-health directorate had [shown it working with several systems on 8 July, the disease-surveillance platform's data now transferred automatically rather than re-entered each week](#). How many of the remaining platforms are connected is not stated.

Nigeria

Nine agencies took bilateral cover under the amended identity Act inside a fortnight, among them [Solid Minerals, the Presidency and Women Affairs and the Bank of Industry](#); no account states a lawful basis, consent mechanism or retention rule for the sharing that follows. The [Nigeria Data Exchange now moves personal data between ministries in production](#) behind the Government Service Portal, on the same silence. Against the single-source-of-truth framing, named practitioners [describe the arrangement as federated linkage on a shared identifier](#), with banks still reconciling by hand. The [National Single Window](#), launched in March, is contested by licensed customs agents who say clearance paperwork has multiplied rather than consolidated.

A state built its own exchange for the most sensitive category of all. Lagos [set out a Smart Health Information Platform on 8 August, to connect patient records, laboratory results and biological data across facilities](#) and to underpin an artificial-intelligence-driven health system, citing the Ebola and COVID-19 outbreaks as the case for moving off siloed facility records. No legal basis, data-controller arrangement, consent model, retention rule or relationship to the national data-protection regime is stated for it — the same silence the federal exchanges above are described in.

Rwanda

A delegation joined the [UNDP Africa Accelerator for Digital Public Infrastructure's session of 2-3 September](#) alongside Ethiopia, Malawi, Sierra Leone and Zambia, working through the move from blueprint to execution, verifiable credentials and consented data-sharing frameworks, and reusable open-source deployment code. What is on record is attendance and a [published agenda](#); no country programme, commitment or deliverable follows from it.

Senegal

A government enterprise-architecture account of 3 August records [platforms still siloed sixteen months after the interoperability platform launched](#), with the architecture to be fed by a full inventory of national digital systems. Four narrower exchanges moved in the same weeks: a [workshop on 23 July to diagnose social-protection systems](#), the minister stating each structure runs its own system and cannot share data; a [climate-transparency data project launched on 22 July over 42 months](#); a [three-month customs roadmap with Gambia](#); and a [convention to interconnect the digital agency and the health-cover platform](#), whose personal-data commitment was not referred to the regulator.

Seychelles

The corridor Seychelles had a memorandum for was signed with somebody else. The AfCFTA Secretariat and Quest Ghana [signed a joint venture agreement in Accra on 31 August to establish the AfCFTA Digital Trade Corridor, to facilitate, track and settle cross-border trade transactions](#) — the same secretariat and the same company as the Seychelles memorandum of March, which remains under review. The corridor is proceeding, and it is proceeding through Accra. Nothing in the record held says whether the Seychelles arrangement is superseded, subsumed or simply waiting.

Sierra Leone

The finance ministry is [piloting a data exchange layer on X-Road](#). No production date, list of connected agencies or governance rules is published.

The exchange that already carries the state's money was found to be carrying something else. The anti-corruption commission [puts over 300 billion leones lost to backend manipulation of the customs system, with processed declarations deliberately deleted and dormant bank-teller profiles used to validate transactions after the account holders had left their institutions](#), and reasonable grounds to suspect coordinated collusion. The finding and the figure are the commission's own; no revenue-authority response, prosecution or remediation is on record.

Somalia

The Auditor-General put a number on how far the state's own systems are from talking to each other. The 2025 annual audit finds [seven government revenue and financial-management systems not integrated with the state financial management information system](#), and records 66 legal-compliance breaches across 22 audited bodies covering 60.1% of the national budget, including US\$18.5m of contracts awarded without following committee procedures. It also finds that a [port and airport revenue-share operator's reporting of US\\$38.08m, of a combined US\\$42.24m, could not be verified](#). The audit report itself is not held, the seven systems are not named, and no remediation plan or timetable is reported against any of it.

South Africa

Two exchanges were arranged this month and neither states what happens to the data. The medicines regulator [opened a pilot inviting sponsors and investigators to report serious adverse events through an externally hosted module](#), routing South African clinical-trial safety data through infrastructure hosted by the WHO's Uppsala centre and adopting its reporting standard rather than a domestic one; no pilot duration, participant target, data-residency statement or transition date to mandatory reporting is published. The revenue service [signed an implementation](#)

arrangement with Malawi's revenue authority for a secure platform exchanging customs information in real time, aligned to the World Customs Organisation data model and operationalising a mutual assistance agreement negotiated in 2019. No go-live date is stated, and no purpose-limitation, retention or reciprocity terms are published.

A third exchange was put out for comment rather than arranged. The revenue service published a consultation paper proposing a five-corner digital VAT model — electronic invoicing, an interoperability framework and electronic reporting — moving toward VAT auto-assessment, with a phased rollout from 2026/27 and feedback due 16 October. It is the one of the three that will reach every registered business, and it is the one still open to be argued with; no cost to business, exemption threshold or accreditation regime for service providers is stated.

South Sudan

The only description the base holds of how import revenue is actually collected is an account of a sanctioned contractor collecting it. A UK-registered firm manages national revenue through a US-dollar e-Permit charge levied on imports before any tax assessment is issued, enforced at all border points by the Ugandan and Kenyan revenue authorities alongside the firm's own staff deployed under national revenue authority cover, and collection has continued since the United States sanctioned the firm on 12 May over the diversion of public resources and foreign assistance. The Tanzanian and Rwandan revenue authorities have publicly dissociated themselves. No contract, legal instrument or revenue figure is published, and no national authority is recorded as answering the account.

Sudan

The National Investment Authority said on 4 August 2026 that a fully electronic single window for investment would operate only once all investment-related entities are linked electronically, with no list, sequence or date given — a precondition stated while the Authority is itself still building its first website.

Two further systems were directed rather than delivered. The national economic management committee, chaired by the Prime Minister, directed the finance ministry and the central bank to expedite completion of the bank's electronic application system with the digital transformation ministry, to strengthen oversight of financial transactions — no description of the system, its scope or its data is given beyond the instruction to finish it. And the agricultural bank said a digital agricultural platform developed with the agriculture and digital transformation ministries is expected to launch soon, alongside second-phase season financing opening by end-August and a grain-silo agreement with a Chinese company; no launch date, function or farmer register is stated.

The first service the base holds that names agency-to-agency links went live. A needs-disclosure service on the national platform lets an investor complete the step digitally, and wires the industry, transport, agriculture and customs bodies to each other electronically. The links are asserted in the launch announcement and nothing else: no data-sharing instrument, service volume or processing time is published.

Tanzania

The public procurement appeals authority directed all domestic and international bidders to lodge challenges through its online module and announced plans to integrate it with the judiciary's system, reported 31 July, with hearings by video conference already taking cases from bidders in five other countries. No date is attached to the integration.

On forest-products revenue the government chose integration over replacement, a two-day technical working group in Dodoma settling on joining the existing systems rather than building a new one. That is the working group's stated choice and not yet an outcome: no interface specification, timetable or go-live date is on file.

Togo

The tax authority closed the paper route into the land record. From 17 August 2026 [digital submission of land parcel plans is mandatory through its single land window, ending paper filing by surveyors registered with the professional order](#). No fallback channel, fee schedule, submission volume or data-protection basis for the cadastral record is stated.

The shared layer it would fit into is now visible, and it is a draft: the enterprise-architecture guide defines a common interoperability framework over four levels, and its own [version page](#) still records version 1.0, status *Brouillon*, with an empty revision log. This is still a single authority's window rather than a piece of a shared layer; the reason has changed from an absent framework to an unadopted one.

Tunisia

The customs estate opened a build rather than a service. The customs administration [began the execution phase of an integrated electronic rules-of-origin system financed by a bilateral partner, with technical preparation running to 18 September 2026](#). The dated stage is the preparation, not the go-live: no operating date, trader-facing interface or cost is published.

Uganda

The month's exchange story is a border system working for someone else. The revenue authority, with its Kenyan counterpart, [continues to enforce a US-dollar e-Permit charge on imports bound for South Sudan, levied before any tax assessment is issued, on behalf of a UK-registered firm the United States sanctioned in May over the diversion of public resources and foreign assistance](#); the firm's staff are deployed at border points under South Sudan Revenue Authority cover, and the Tanzanian and Rwandan authorities have publicly dissociated themselves from the arrangement. The revenue authority is not recorded as answering the account, and no agreement or legal basis for the Ugandan side is published.

Zambia

The government service bus, the central integration layer, onboarded eight of 116 local authorities from June 2026 and now carries more than 400 government services with over K8.8 billion collected cumulatively across the service bus, payment gateway, national portal and payment platform ([collection figures](#); [Accountant General's office](#)).

A register of a different kind opened alongside it. Zambia [launched a fully digital National Carbon Registry on 7 August](#), embedded in the national measurement, reporting and verification system and interoperable with Article 6 of the Paris Agreement, developed under a donor programme with a UN climate centre, a consulting group and a green growth institute. No public access, transaction count, custodian ministry or disclosure rule for its holdings is stated — which for a registry whose purpose is to make carbon claims checkable is the question it exists to answer.

Zimbabwe

Customs data crossed a border on paper this month, in the form of an agreement to stop it having to. Customs administrations from five countries [adopted a roadmap and action plan for customs-to-customs data exchange at a meeting in Pretoria ending 26 August, to exchange trade information before consignments reach the border so that documentation and risk assessment happen earlier](#), building on a link this country already runs with Zambia. Data standards, interoperability, cybersecurity, legal authority and information quality are all recorded as unresolved, and no corridor or target crossing time is named.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
