

MONTHLY UPDATE

Algeria: monthly update, July 2026

Edition of 2026-08-17 · 22 systems and instruments tracked, 7 of them not held

Developments recorded from artefacts published between 2026-07-01 and 2026-08-17 – July 2026 carried forward to the date of issue, so the report holds the nightly catch to the day it was cut. Sections follow the status report.

Summary of the month

The state inaugurated its own data-centre estate on 5 July and gave administrations one month to interconnect to it; the apostille legalisation platform opened on 9 July; the national services portal acquired a telephone helpline on 29 July. Three further instruments passed through a single Council of Government sitting on 23 July – renewal of both incumbent GSM licences by executive decree, a national information-verification system, and an accreditation and conformity network – and none of the three has a published text.

The Ministry of Foreign Trade and Export Promotion announced on 27 July that from 1 August applications to import services must be lodged, processed and tracked exclusively through a new platform, with [no fallback or assisted channel stated](#).

Nothing moved on the ethical-AI law, the domestic instant-payment system or the universal-service build. The National AI Strategy moved after July closed: a [joint inter-ministerial roadmap for deploying artificial intelligence across public services was agreed and reported on 12 August](#), the text of the strategy still unpublished.

Infrastructure

Connectivity

IPv6 generalisation was [launched on 14 July](#).

On 23 July the Council of Government examined draft executive decrees renewing the public cellular licences held by Mobilis and Optimum Telecom Algérie (Djezzy). Renewal by executive decree places licence continuation with the cabinet rather than with the regulator, which ran the 5G round as a competitive tender. No term, fee, coverage obligation or decree text is held, and the Prime Minister's own communiqué of the sitting is not on file – the account rests on [one press carry](#).

Data Storage

The National Digital Services Centre was inaugurated by President Tebboune on 5 July: [two active-active sites at Mohammadia and Blida](#), built by Huawei to Uptime Tier III design, with 99.98% availability claimed by the operator. On 12 July administrations were ordered to interconnect to it [within one month](#). The national sovereign cloud is hosted there; no service catalogue and no tenant list is held, which is why its position is recorded without a baseline rather than as an advance.

Digital public infrastructure

Digital Payments and Fintech

The Bank of Algeria hosted the [29th ordinary meeting of the Arab Commission for Payment and Settlement Systems](#) in Algiers on 27 July. No instrument was concluded.

Sectoral management information systems (HMIS, EMIS, etc.)

A pilot arrived on 30 July: SEAAL signed an MoU with OTEC and Omantel for [automated water-meter reading](#) on a LoRaWAN network, with no site, scale or start date stated.

Other GovTech and e-Gov

The apostille platform went live on [9 July](#), following Algeria's accession to the Hague Convention on 25 August 2025, with recognition claimed in about 126 states. It was planned at accession and implemented at launch.

The national single window gained a free helpline, 3017, from [29 July](#), open seven days a week. The same account puts the portal at 21 live services in 2026-07 against targets of 62 by end-2027 and 350 by 2028.

A second national portal was announced on 24 July: the Ministry of Labour, Employment and Social Security will consolidate its attached bodies behind one electronic portal, reporting [235 services delivered online in 2026-07](#) and 97% document digitisation in 2026-04, and targeting 50% more online procedures by December 2026. No interoperability with the national portal is stated.

The services-import platform announced on 27 July becomes the exclusive route from 1 August. Nothing held confirms it in operation.

Governance and regulation

Legislation and regulation

The electronic commerce law is in force and, on a consumer body's assessment, largely bypassed: [the great majority of online selling runs through social-media pages outside its obligations, with cash on delivery dominant](#). That is named-analyst opinion rather than a state position; the law's own date and text are not held, and no enforcement action or compliance figure is on file. Separately a [national information-verification system was examined in draft by the Council of Government on 23 July](#), with no regulator, legal basis or oversight mechanism named in anything held. On 14 August the telecommunications ministry [asked Meta to require every WhatsApp account to stay linked to a](#)

[verified national mobile number](#), rejecting the username-only accounts introduced in June 2026 and citing fraud, identity theft and cybercrime prevention. It is a request rather than an instrument; no order, deadline or sanction is stated, and the platform-regulation bill deposited in October 2025 remains undebated.

Regional collaboration

Algeria [signed as a founding member of a world artificial-intelligence organisation at Shanghai on 16 July](#), the digitalisation commissioner stating an intention to take an active role. The organisation is not named in anything held, and no accord text, ratification step or work programme is on file.

Standards

Progress on a national accreditation, conformity and certification network and its GEOLAB platform was reviewed at the 23 July Council of Government sitting.

Data protection

The data-protection authority adopted a deliberation on 15 July holding that any photograph or video permitting direct or indirect identification of a natural person is personal data, so its collection, storage, retention and publication need a legal basis. Publishing images on platforms whose infrastructure is hosted outside Algeria [may constitute an international transfer](#), triggering the adequacy obligations of articles 44–45. The deliberation's own number, text and commencement are not held; the capture is a press account of it.

One further governance event changed nothing: the national police held a [study day on 1 July](#) tying data protection to national security, with the authority present. It names no instrument.

Artificial intelligence and the technology sector

AI

On 25 July the Higher Education Minister announced that from the 2026–2027 academic year each student's learning pathway will be steered by an intelligent assistant matching modules to competences and career goals, alongside a large language model for lecturers that generates teaching material and [marks student answers](#). No appeal route, accuracy claim, disclosure duty or human-review threshold is reported. The figures given alongside are the minister's own, delivered in a speech, and none is independently sourced.

The strategy itself moved in August rather than July. A [joint inter-ministerial roadmap was agreed to deploy artificial intelligence across public services, prioritising sovereign open-source models, high-performance computing centres, national data storage and stronger safeguards for public-sector applications](#), reported on 12 August by the higher education minister, with intensive university training programmes, a dedicated research centre and specialised research units, and a joint monitoring committee established to oversee delivery against a stated timeline. The strategy text is still not published and the ethical-AI law has not moved.

Three external events are dated in the month and moved nothing. The Post and Telecommunications Minister told the inaugural [UN Global Dialogue on AI Governance](#) in Geneva on 6 July that global governance should move from principles to technology transfer and capacity building. Smart Africa's chief executive met him on [13 July](#) on AI

adoption and digital integration; no agreement or commitment is reported. Algérie Télécom received a [WSIS Forum certificate of appreciation](#) on 9 July. The award is a certificate of appreciation; the ministry described it as confirmation of Algeria's standing.

ICT Industry

The state electronics manufacturer was [accredited to install and maintain every payment terminal on national territory whatever its brand or origin](#), widening it from its own-brand devices, against 1.6m terminals produced. The accreditation's own date is not stated — only the report of it.

Innovation ecosystem

The student start-up conversion scheme reports [673 start-ups, 3,949 patents and 2,339 innovative-project labels between 2022 and July 2026, against a 2030 target of 5,000 labelled products](#). It lets students convert final-year projects into start-ups or patents and is supported by a prototype-financing scheme and the country's first venture-capital fund. The ministerial order behind it is not held, neither its date nor its text.

Finance

MoUs and other agreements

On 26 July Algeria and Oman [discussed digital cooperation](#) across artificial intelligence, data centres, fintech and space, with the Omani ministry and the Oman Investment Authority offering flexible partnership arrangements. No instrument was concluded at the meeting, so it stands as planned.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
