

MONTHLY UPDATE

Togo: monthly update, August – September 2026

Edition of 2026-09-03 • 23 systems and instruments tracked

Developments summarised from sources published between the beginning of last month and today.

SUMMARY OF THE MONTH • GOVERNANCE • ICT INFRASTRUCTURE • DPI • DIGITALISATION • TECHNOLOGY • CAPACITY • INCLUSION

Summary of the month

Two commercial-justice bills moved through both chambers while the digital instruments stayed unpublished. The National Assembly [adopted commercial-courts reform and accession to the Hague Apostille Convention in first reading on 14 August](#) and the Senate [adopted the courts reform on 21 August](#), while a scoping meeting [opened a review of the 2009 civil registration law with proposals due before the end of the year](#). Against that the Council of Ministers [authorised an Internet-of-Things licence on 4 August](#), with the base holding the announcement and not the decree “no number, no text, no entry into force.

The firmest dates are obligations on citizens and firms rather than on the state: [retirement allowances stop on 31 August for anyone who has not registered payment details](#), cadastral plan submissions became digital-only from 17 August, and [fuel has carried a molecular marker since 1 July](#).

Governance

Strategies, plans and policies

The [government roadmap for 2026-2031 is in force](#) with headline targets of a doubling of gross domestic product per head and poverty below 15 per cent. The text is not held, no digital chapter or digital target is on record, and the three sectoral tracks at its private-sector workshop of 30 July were agro-industry, logistics and transport, and energy — none of them digital. The [regulator's head was elected president of the West African regulators' association](#) at the assembly Togo hosted in April.

Legislation and regulation

The month's legislating was about commercial justice and civil status rather than about digital instruments. The National Assembly [adopted bills on commercial-courts reform and on accession to the Hague Apostille Convention in first reading on 14 August](#); the Senate [adopted the courts reform on 21 August](#), and neither promulgation is held. Separately a scoping meeting [opened a review of the 2009 civil registration law to support digital transformation, proposals due before the end of 2026](#). An apostille accession is a digital question in practice: it is the route by which a document issued by one state's register is accepted by another's.

Regional collaboration

The corridor the country sits on is the subject of the month's regional work. A [regional dialogue at the Togo-Ghana joint border post on 13 August](#) sought to accelerate free movement along the Abidjan-Lagos corridor, reaffirming rollout of the regional biometric identity card and the interconnected transit system to cut border delays. No deployment figure, timetable or data-protection arrangement for the shared border and transit data is stated, and the reaffirmation is of commitments the base has held for some time rather than of anything newly delivered.

Standards

Togo launched the National Accounting Council, [the body a regional directive of 28 November 1997 requires each member state to establish](#), tasked with making accounting information reliable, relevant, comparable and consistent with international standards. [The directive itself](#) is now held. Twenty-nine years between the obligation and the institution is the finding, and it is the one instrument this section gained in the period whose text a reader can actually reach.

Public debate and participation in policymaking

The regulator spent August on the road rather than on rules. Its [seventh national consumer-sensitisation tour ran from 3 to 28 August with consumer associations and operators](#), briefing operators and association leaders on electronic-communications rights and, at Bassar, on preventing mobile-money fraud. At the Kara leg on 6 August, [local officials asked the regulator to widen its remit to all economic operators](#) — a request to be regulated more, not less, and the clearest signal in the record of what consumers think the alternative is. No attendance figure, complaint volume or outcome measure for the tour is published.

ICT Infrastructure

Connectivity

The Council of Ministers [authorised a five-year renewable licence for Internet-of-Things networks](#) on 4 August, distinct from the incumbent mobile and internet authorisations; the decree authorises the grant rather than recording it, and no licence number, fee, coverage obligation or ownership of the licensee is published. Separately, [capacity was added on a second submarine system for route diversity](#) after three multi-country West African outages in twenty-eight months — a pan-regional arrangement in which Togo is one of eleven places named and no Togo-specific capacity, price or route figure appears.

Cybersecurity

The cyber institutions are in place and the record of what they do is thin. [The national incident-response function runs inside a joint venture of the Togolese state and a Polish group](#), so the incident record, tooling and institutional memory sit with a foreign supplier; no incident-response profile or annual report is held. The agency's director-general put [more than 333,000 incidents handled between 2021 and 2024, rising from 39,168 to 181,088](#) — a 4.6-fold increase with no figure for 2022, 2023 or 2025 and no definition of an incident.

The team is at least visibly operating: it [issued a high-severity alert on an active online account-compromise campaign on 19 August](#). It is the first published alert the base holds from it, and no post-incident account, affected count or resolution follows.

DPI

Data Exchange

The tax authority closed the paper route into the land record. From 17 August 2026 [digital submission of land parcel plans is mandatory through its single land window, ending paper filing by surveyors registered with the professional order](#). No fallback channel, fee schedule, submission volume or data-protection basis for the cadastral record is stated — and the country's own national interoperability and data-exchange framework remains *Not held*, so this is a single authority's window rather than a piece of a shared layer.

Digital Payments and Fintech

Payments moved on a deadline. Retirement allowances [began paying by bank transfer and mobile money in July](#), and allowances stop on 31 August for beneficiaries who have not registered payment details; no beneficiary count or registration rate is published, and no alternative is stated for someone without a bank account, a handset or an identity document. The regional [deadline to connect to the instant payment platform moved from 30 June to 30 September](#), and to 30 June 2027 for microfinance institutions. A [treasury prepaid card was announced](#) with no timetable and no confirmation that a file has been lodged with the central bank.

The month's other payments development is private and points outward. A domestic financial-technology firm founded in 2024 [runs a single platform interconnecting bank transfers, mobile wallets and dollar stablecoins, converting into the naira, shilling, cedi and the CFA francs, and exposing payment operations to autonomous software agents](#). No transaction volume, corridor count, licence or customer figure is stated, and the account is a profile rather than a filing.

Registries

The [second national birth-registration catch-up campaign opened at Agbandi on 31 July](#), targeting a further 6,461 children across 25 communes and taking the two campaigns to 11,461. The same report [carries the funder's figure of nearly 7,400 for the same campaign](#), and the two are not reconciled.

Sectoral management information systems

Togo put a [national platform online centralising climate-risk data for public decision-making across agriculture, forestry, water resources, tourism and energy](#). Indicators on droughts and floods are entered by field agents, checked by sector focal points and regional officials before national consolidation, time-stamped to leave an audit trail, and viewable at regional, prefecture and municipal level; it was developed by the environment ministry with technical support from a UN agency and climate-fund financing, and follows the regional adaptation plans adopted by all five regions in 2025. The source gives no launch date.

The modules for a [National Malaria Data Repository were approved](#), following a training-of-trainers workshop held at the public-health training and research centre. No go-live date, facility coverage or data flow is stated.

Other GovTech and e-Gov

One procedure came off paper. The council of ministers [adopted a decree on 26 August amending the investment-approval committee so that the approval procedure is handled electronically](#). The wider programme it sits in was described the same week: the ministry [set out accelerating reforms across governance, land and digital, naming cyberdefence and biometrics](#). Neither account carries a timetable or a cost.

Digitalisation

Digitalisation of sub-national government

A commune of Greater Lome began building the kind of register a municipality has not had. Golfe 2 [launched a georeferenced census of households, businesses and taxpayers on 11 August, running to 10 October](#), to build a secure municipal database under the communes federation's digitalisation push and the 2023-2027 communal development plan. No data-protection basis, custodian, retention rule or access arrangement is stated for a file that ties households, businesses and tax position to a location.

Rural digital data capture

Togo's agricultural digital work is now being copied. Chad [drew on the Togolese experience of deploying agricultural digital solutions](#). The account is the host government's own. What the record held does not carry is a measure of what those solutions have achieved in Togo, which is what would make the visit worth making.

Technology

ICT Industry

[Fuel marking and traceability began at Lome](#), the obligation having applied since 1 July: every litre through legal channels carries a molecular marker verifiable at depot, station and roadside, with sanctions running to seizure, fines of FCFA 50,000 to 10,000,000 and closure. Neither the contract amendment nor the marking regulation is held, and no contract value, duration or data-ownership term is published.

Capacity

Literacy

A programme of [school FabLabs, trained fabmanagers and regional innovation and technology centres](#) was set out publicly, together with the vocabulary it will be run in. No site count, budget or opening date is given.

Inclusion

Access to services

A service was built for people who cannot rely on a connection. A pilot of LébéNam, [an offline-capable platform for reporting gender-based violence and routing victims to the nearest care point](#), was run this month. Designing for intermittent connectivity is the notable part. It is a pilot: no case volume, geographic coverage or referral outcome is in the record held.

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
