

MONTHLY UPDATE

US / hyperscaler activities: monthly update, August 2026

Edition of 2026-09-03 · compiled by Claude Opus from the documents in the Corpus repository

9 places. Every block below is carried verbatim from that place's own monthly update, where it was written, sourced and checked; nothing is written here.

DJIBOUTI · EGYPT · KENYA · LESOTHO · MAURITIUS · NIGERIA · SENEGAL · UGANDA · ZIMBABWE

The place reports do not share one window; the period above is the range they span.

Djibouti

A new impetus in digital and media cooperation between Djibouti and the United States was reported on 1 September 2026, with no instrument, sum or timetable published. What changed is that a bilateral digital relationship is on the record at all: the standing engagement until now was a hyperscaler's cable route that names Djibouti among its landings and has had no activation status published since 2021.

Egypt

The vendor relationship moved a step, and only a step. The prime minister [witnessed the signing of a letter of intent between the communications ministry and Cisco Systems](#). A letter of intent binds nobody to anything: the record held carries no value, no scope of works and no date by which either side is to do something, which is the difference between this and the Mediterranean capacity partnership already on the ledger.

Kenya

A delegation from a Korean university and development institute [came to Nairobi to evaluate the outcomes](#) of South Korea's development assistance to the digital economy. No findings, envelope or successor programme has been published, and the row sits under this heading because the base holds no separate slug for Korea.

Lesotho

The [US Embassy stated](#) at the Kobong ceremony that it has facilitated US\$7.3bn of commercial partnerships in Lesotho over the previous eighteen months.

Mauritius

The summit's other announcements differ in kind. The [Amazon memorandum was executed at the opening ceremony](#) with soft scope and no disclosed value, and [its training will run initially in rented premises](#). The claim that the operator's data centre already hosts current-generation accelerators is the chief executive's own.

Nigeria

The month's hyperscaler activity is a renewal rather than a new commitment. Google [gave students at accredited Nigerian universities, polytechnics and colleges of education twelve months of its AI Plus plan free](#), a subscription it prices at ₦92,400 (US\$68.56), the second consecutive year of the offer and one of 27 Sub-Saharan rollouts, with eligibility verified through a third-party enrolment-checking platform. No cohort figure is published for Nigeria, and the take-up of the equivalent 2025 offer is not stated, so the programme's reach is unmeasured at both ends.

Senegal

The digital minister pitched the technology strategy in Washington, holding [working sessions on financing mechanisms for digital infrastructure, data centres, digital identity and payment systems](#). No financier, amount or instrument was reported.

Uganda

The United States health-data memorandum is now held, and it is not the instrument the reporting describes. The signed text [caps the arrangement at seven years, places it under joint steering-committee governance with Uganda as data owner, binds all activity to the Data Protection and Privacy Act and the national data-governance framework, and has Uganda approve the health information architecture before any United States-financed investment; planned support is US\\$1,719,960,000 against Uganda's US\\$577,001,796, including US\\$113,102,289 for data systems](#). It provides only for a future data-sharing agreement. A [news organisation reported on 23 July that it had reviewed that agreement directly and that it grants direct, real-time login access to nine of Uganda's health data systems for seven years](#). The two accounts describe different instruments rather than contradicting each other; the agreement's own text is unpublished and not held, and no Ugandan or United States primary has confirmed or denied the account.

Zimbabwe

Zimbabwe withdrew from the bilateral health talks, and the dispute over why was settled this month against the templates rather than the parties. Harare's account is that talks ended over long-term United States access to national health data and an attempt to fold in critical minerals; the [embassy stated the conditions were co-investment, financial accountability and specimen sharing during outbreaks, and that assertions it sought Zimbabweans' personal data are categorically false](#). Both are supportable. The [model data-sharing agreement gives the United States secure, uninterrupted access, expressly including login credentials, to seven national health systems for twenty-five years continuing ten years past termination](#) — and in the same clause tells the partner not to provide individual-level or personally identifiable data unless there is no other way. The [template memorandum requires physical specimens and related genetic sequence data of pathogens with epidemic potential within five days of detection, for twenty-five years](#). Harare is describing standing credentialled access to live systems; Washington is denying transfer of identifiable records. Neither template is the Zimbabwe draft, which was never signed and does not exist as a public document. [About 1.2m people on United States-supported HIV treatment face wind-down](#).

Figures are dated because most are time-varying: a figure carries the date it was true, not the date you are reading it. Where the base holds no reliable statement, the document says **Not held** rather than leaving a silence — those are counted, and listed at the end.

This is a dated edition and is not revised after publication. If a figure here has moved, the current edition will say so.
